

FMP, TTI, COVID-19, WTF? 🤔

Making Sense of Performance Metrics

Ire Aderinokun

#PerfMatters 2020

Why is performance important?

In Nigeria, the average cost of 1GB of data is N850, **3% of minimum wage.**

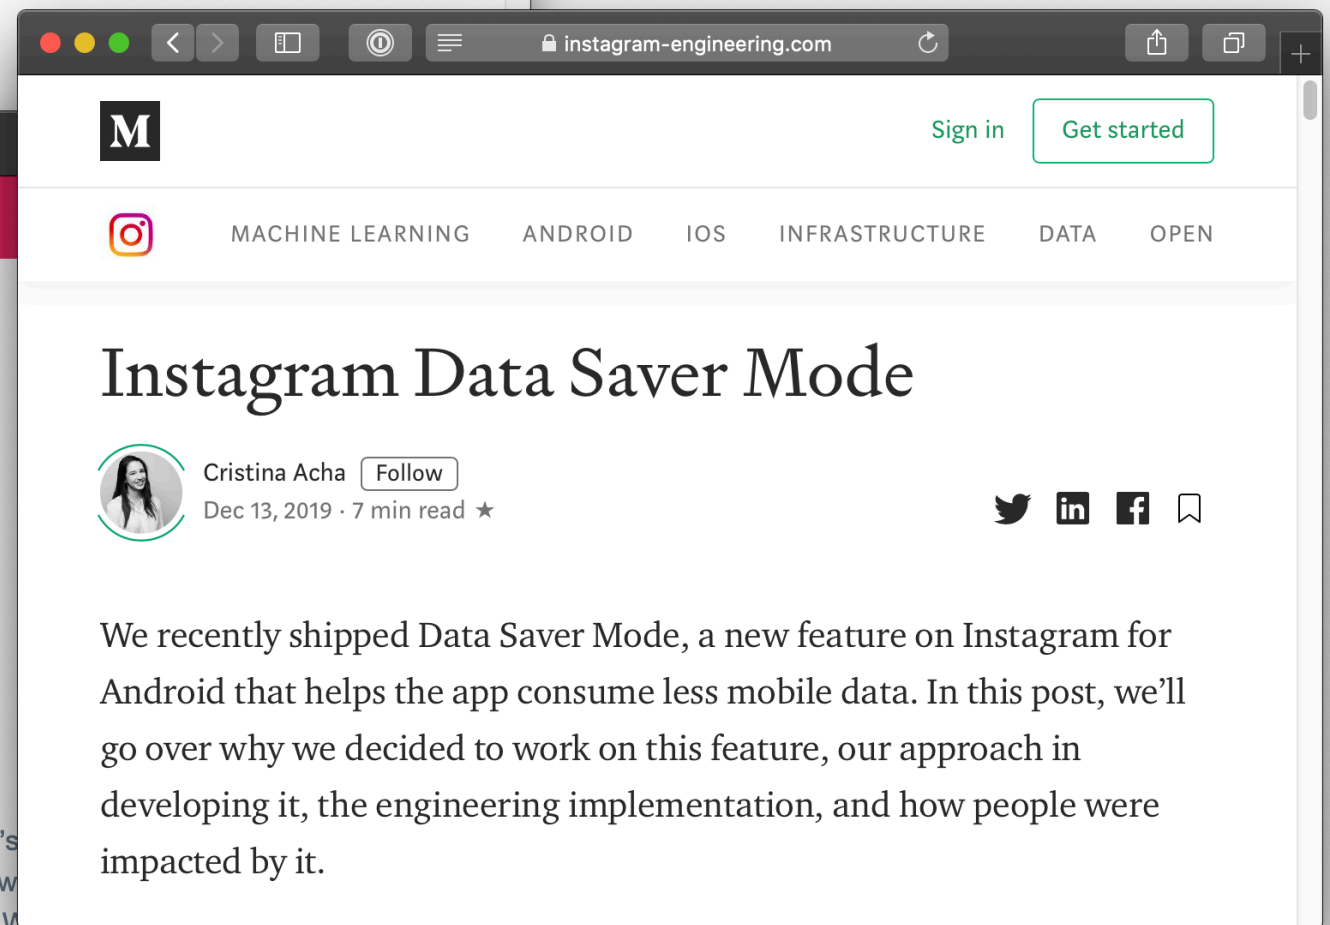

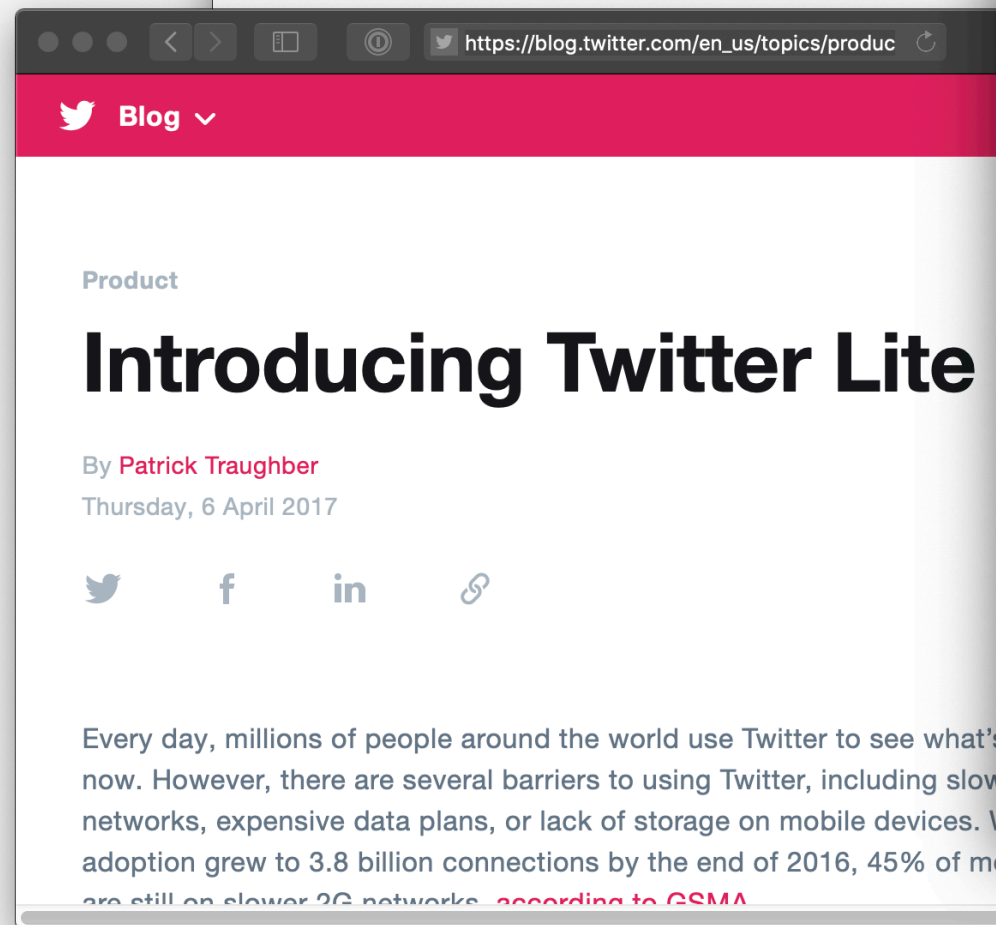

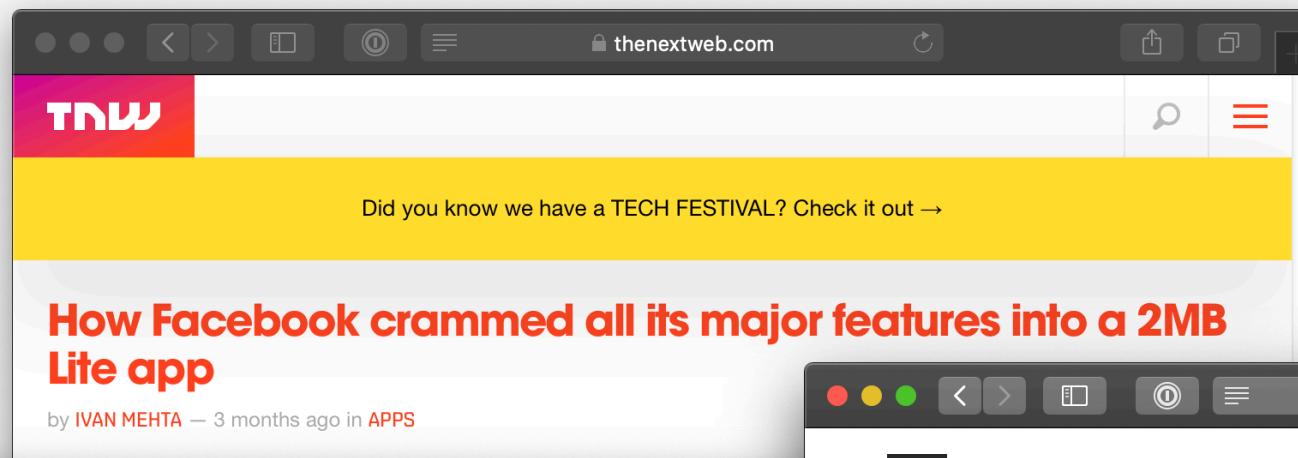

That's more than **1 hour of work** 🤯

<https://www.ispreview.co.uk/index.php/2019/03/uk-ranked-136th-out-of-230-countries-for-its-high-mobile-data-price.html>

In the US, minimum wage employees
have to work almost **2 hours** to earn
enough for 1GB of mobile data 🤯

<https://www.ispreview.co.uk/index.php/2019/03/uk-ranked-136th-out-of-230-countries-for-its-high-mobile-data-price.html>

Having a performant website is a
competitive advantage 😎

Having a performant website is just like
having **good service** in the physical world..

...but your customers are less patient 😡

Users are **90%** more likely to
abandon a page that takes up to
5 seconds to load

What does ***performant actually mean*** for your site?

Browser requests page

Page fully loaded

15 seconds 😡

Browser requests page

Page fully loaded

The **onLoad** event captures when the document and all its resources have finished loading.

```
var start = Date.now();
```

```
window.addEventListener('load', function() {  
    var end = Date.now();  
    var loadTime = end - start;  
});
```

The **DOMContentLoaded** event captures when the Document Object Model has been constructed.

Max Potential First Input Delay

Is there **content**?

Time to First Byte

First Paint

First Contentful Paint

Time to First Byte measures the time from when the browser requests a page to the first byte of the page being received.

First Paint measures the time when the first pixel is painted on the screen.

First Contentful Paint measures the time when the first piece of content from the DOM is rendered.

Is the content **meaningful**?

Largest Contentful Paint

Visually Complete

Speed Index

Largest Contentful Paint, a successor to First Meaningful Paint, measures the time when the largest piece of content within the viewport is rendered.

👉 First Meaningful Paint

👍 Largest Contentful Paint

Visually Complete measures the time taken for the content within the viewport to be fully rendered.

Speed Index is a score of how quickly visual content is rendered within the viewport.

$$SI = \int_{start}^{end} 1 - \frac{\%VC}{100}$$

Is the content **interactable**?

First Input Delay & Max Potential First Input Delay

Total Blocking Time

Time to Interactive

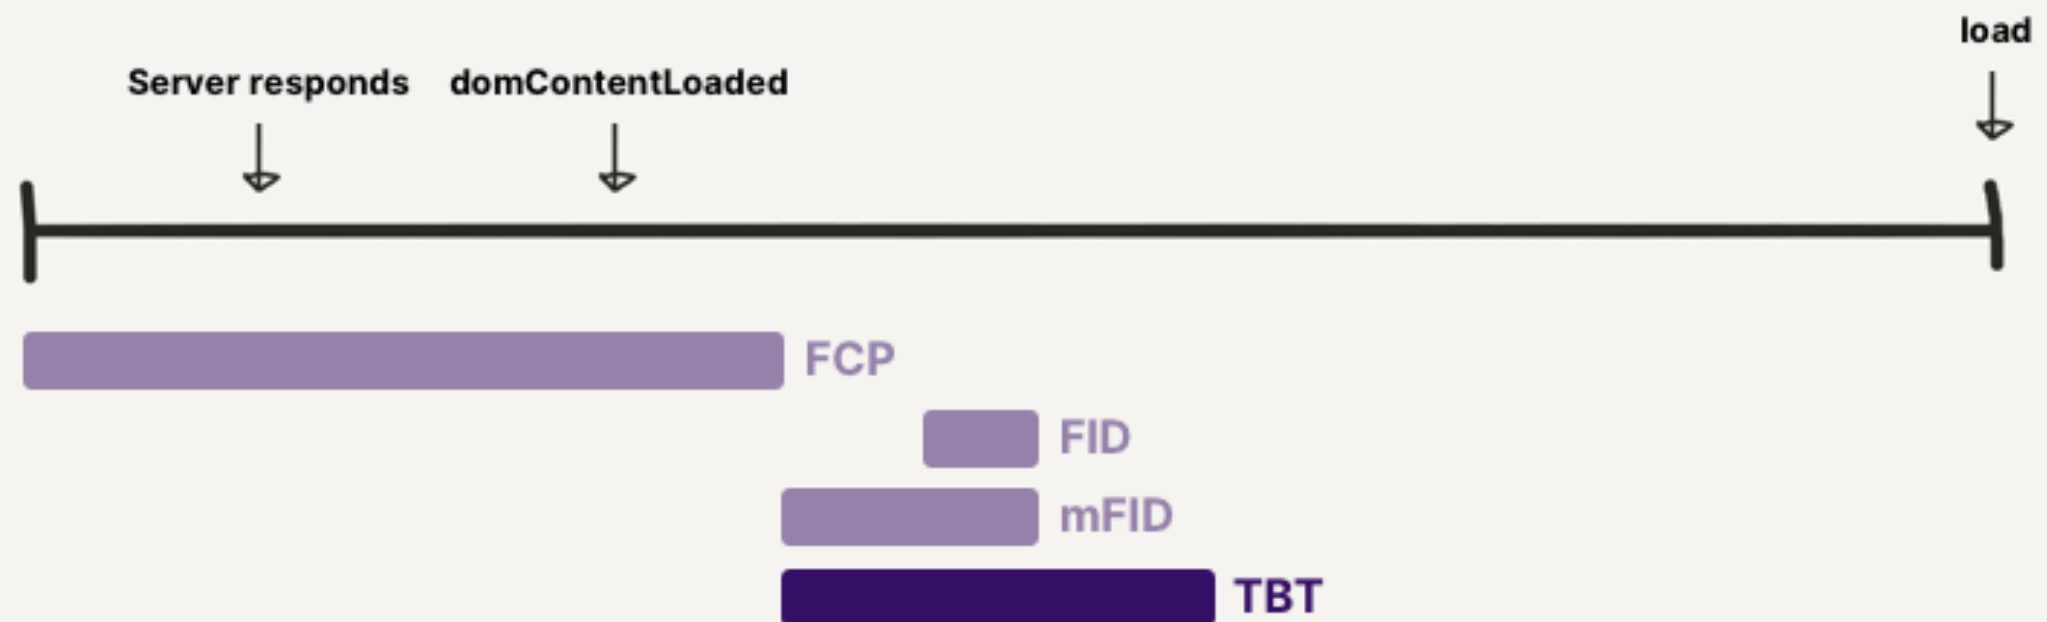

First Input Delay measures the delay between the time a user can attempt to interact with a part of the site, and the time that the interface is able to respond to that interaction.

Max Potential First Input Delay measures the maximum possible First Input Delay based on the duration of the longest task.

Total Blocking Time measures the total duration of Javascript tasks between the First Contentful Paint and Time to Interactive.

Time to Interactive measures the time when the main thread has had up to 5 seconds with no network activity or JavaScript tasks.

Are interactions **smooth**?

Cumulative Layout Shift

Frame Rate

Cumulative Layout Shift measures the shifts in layout while a page is loading.

Frame rate is the rate at which the browser can produce new frames in response to interactions and/or animations.

Jank Invaders

Oh noes! Our intergalactic space fleet has been infiltrated by ships of inferior framerate! Watch closely, and blast the spies to pieces as quickly as possible!

The good guys move like this:

Don't shoot those or you'll get a 10 second penalty. **The bad guys move like this:**

How do I ***implement*** performance metrics?

✓ Choose the **metrics**

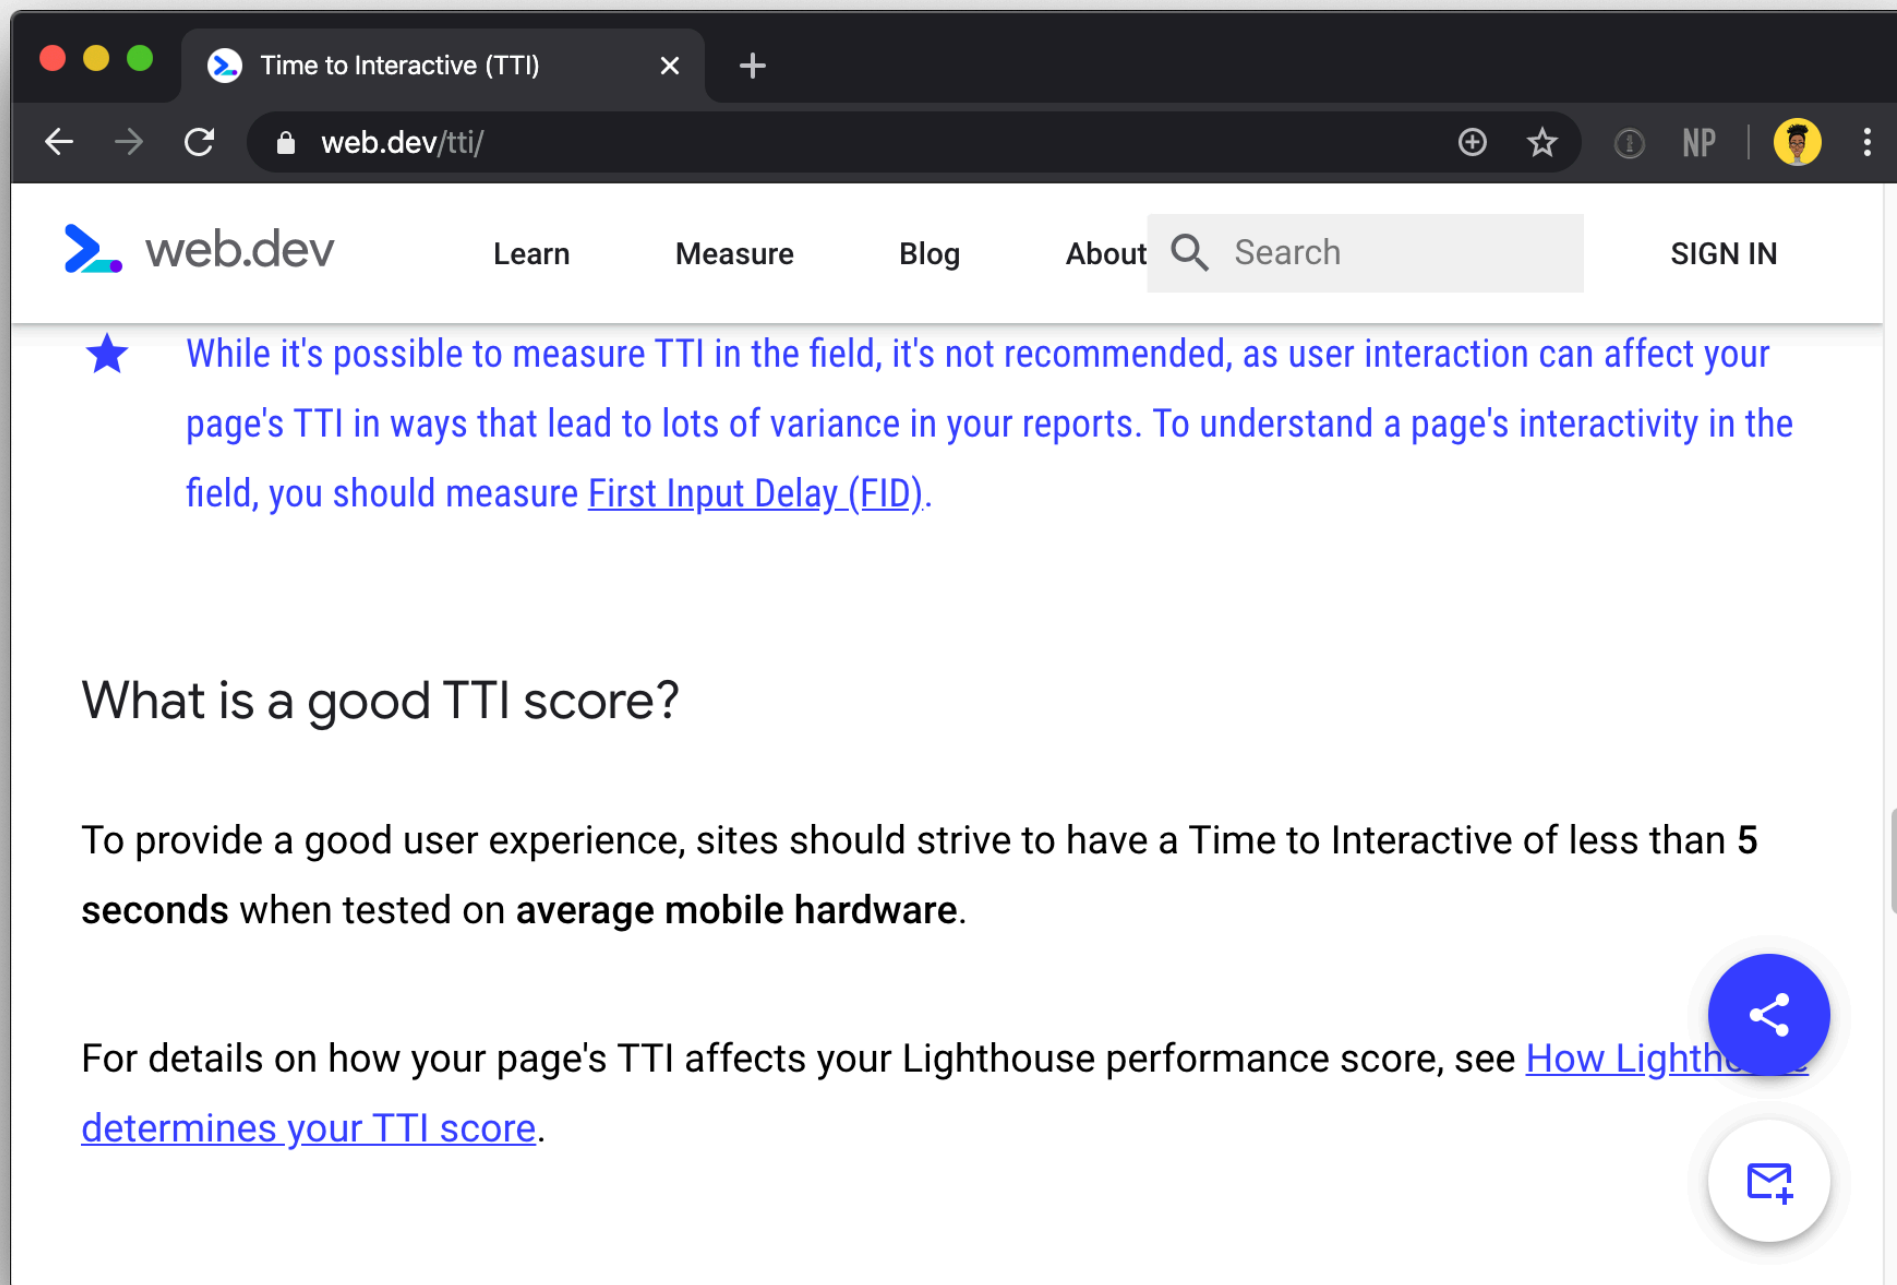

🤔 Define a **budget**

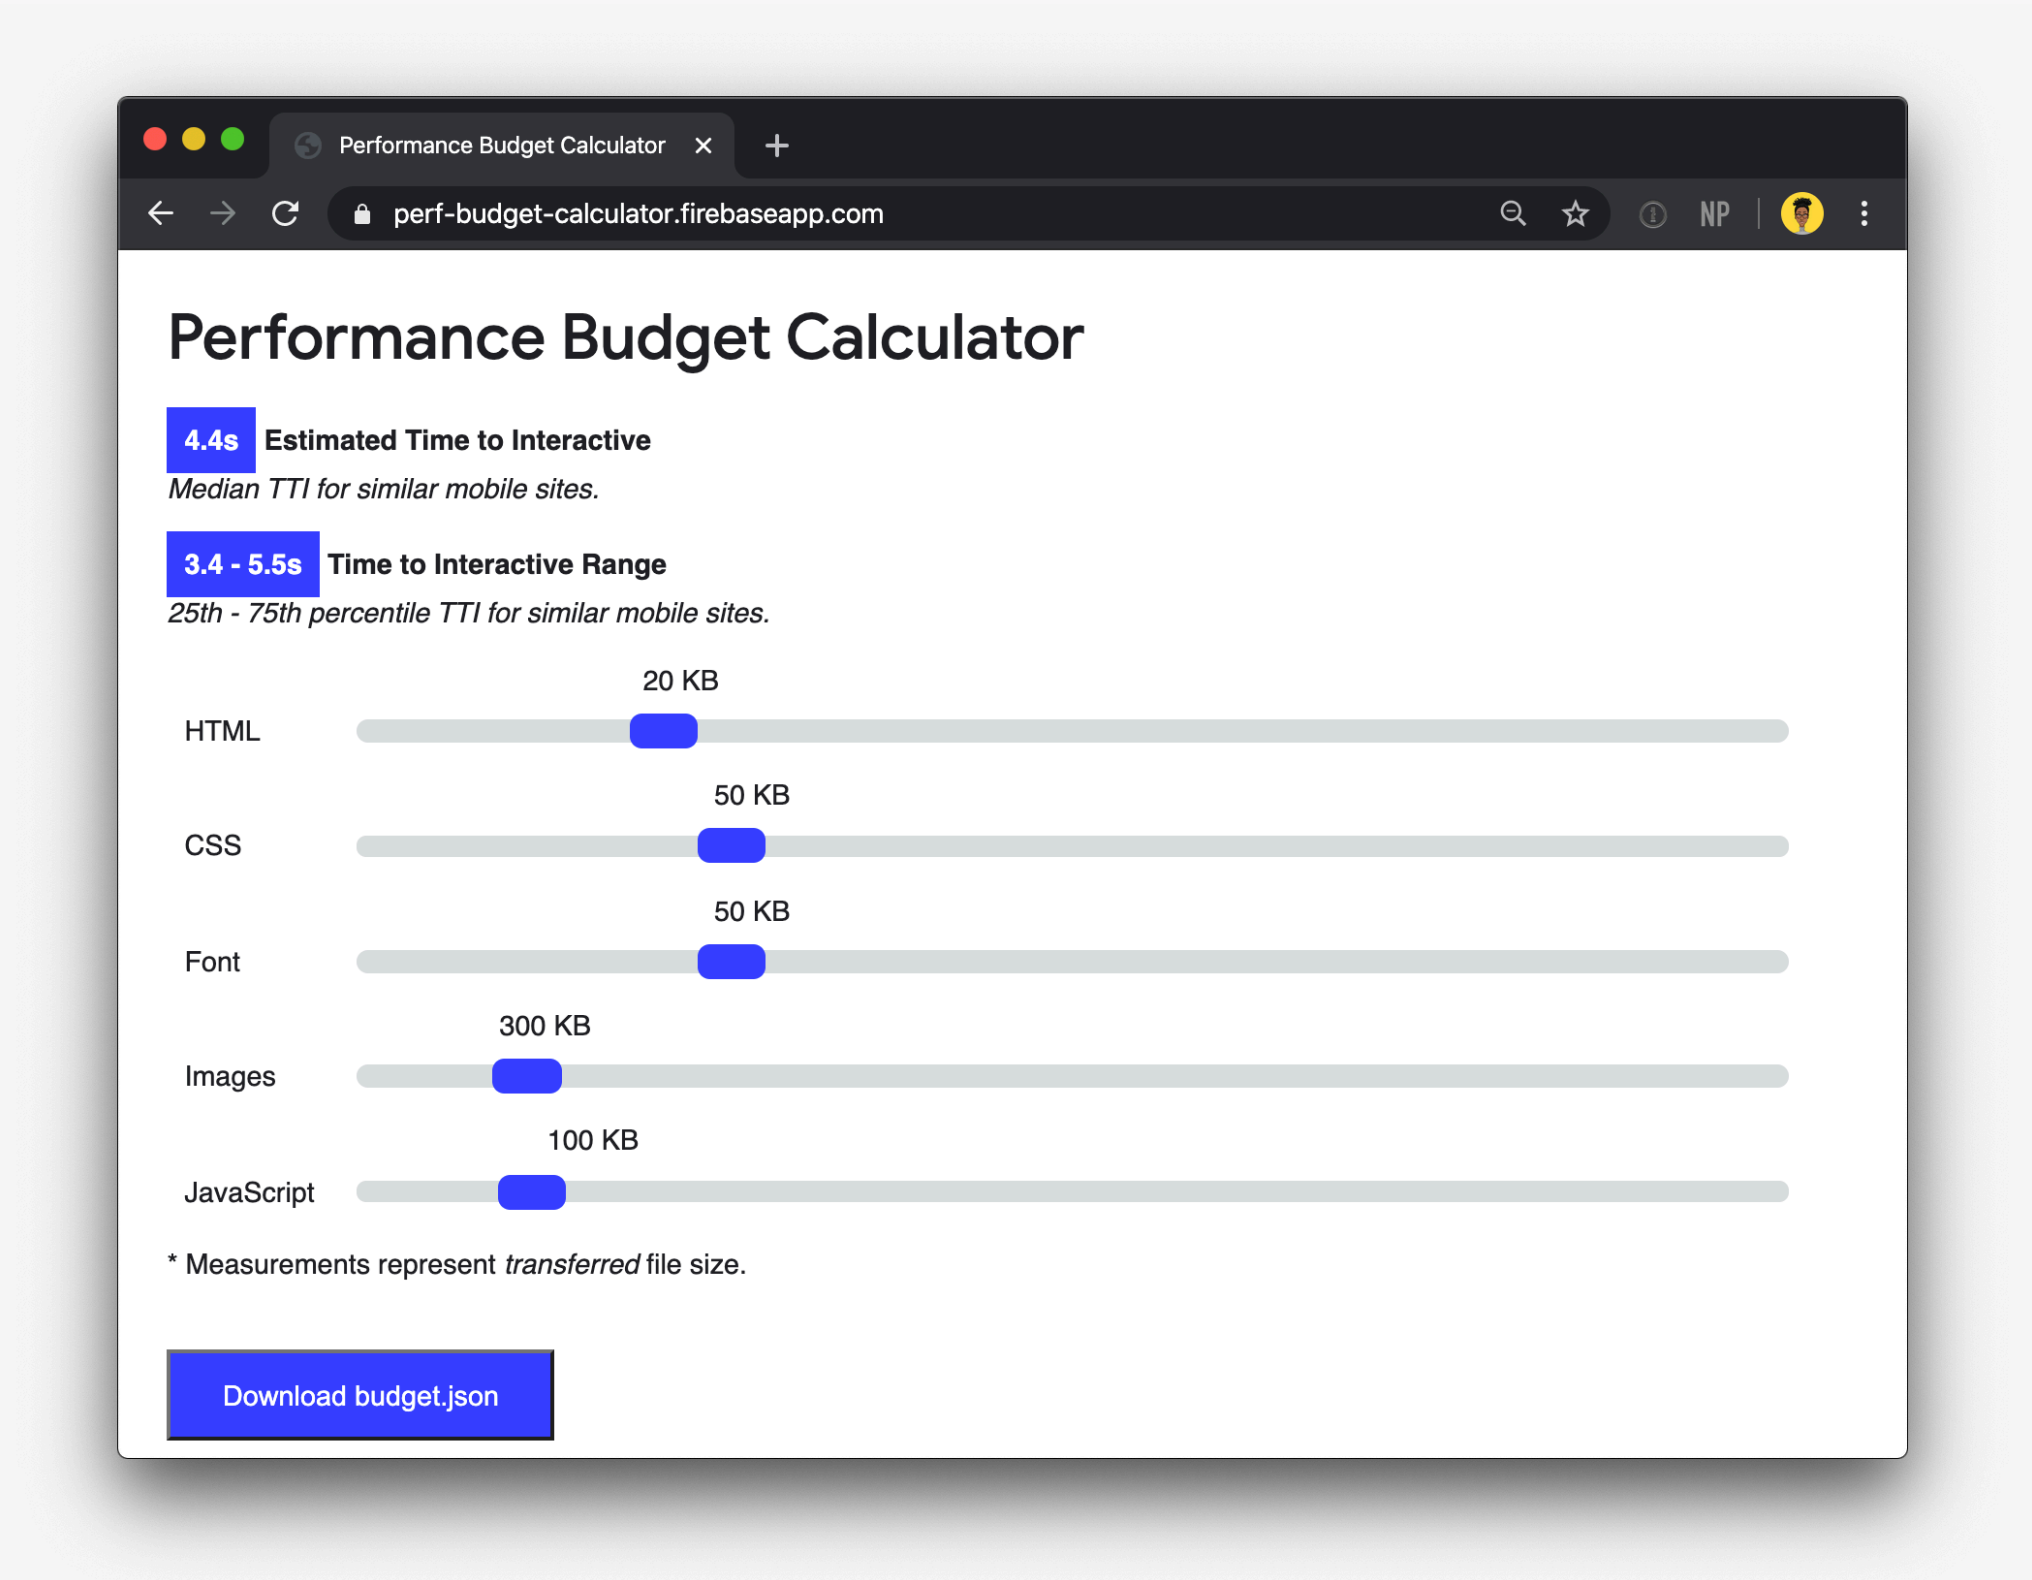

🤔 Start **measuring**

A **performance budget** defines specific values to your metrics that your site should never exceed.

Example: News Website 📰

- FCP should not exceed **1.5 seconds**
- LCP should not exceed **2 seconds**
- SI should not exceed **0.43**
- TTI should not exceed **4 seconds**
- CLS should not exceed **0.1**

perf-budget-calculator.firebaseio.com

Use your **competitors** as a
baseline/guide

i don't have to outrun the bear

i just have to outrun you !!

✓ Choose the **metrics**

✓ Define a **budget**

🤔 Start **measuring**

Calibre

✓ Choose the **metrics**

✓ Define a **budget**
