<TITLE>Remembrance of Proust</TITLE>
<H0>Proust's Pride</H0>
<P>
"À la recherche du temps perdu" consists of seven volumes totaling around 3,200 pages and featuring more than 2,000 characters. André Gide was initially not so taken with his work. The first volume was refused by the publisher Gallimard on Gide's advice. He later wrote to Proust apologizing for his part in the refusal and calling it one of the most serious mistakes of his life.

Extensions to HTML

All the Netscape extensions to **HTML** take the form of additional tags added to existing **HTML** elements.

<ISINDEX>

To the ISINDEX element we have added the PROMPT tag. ISINDEX indicates that a document is a searchable index. PROMPT has been added so the document author can specify what message they want to appear before the text input field of the index. The default is of course that unfortunate message:

This is a searchable index. Enter search keywords:

<HR>

The HR element specifies that a horizontal rule of some sort (The default being a shaded engraved line) be drawn across the page. To this element we have added 4 new tags to allow the document author some ability to describe how the horizontal rule should look.

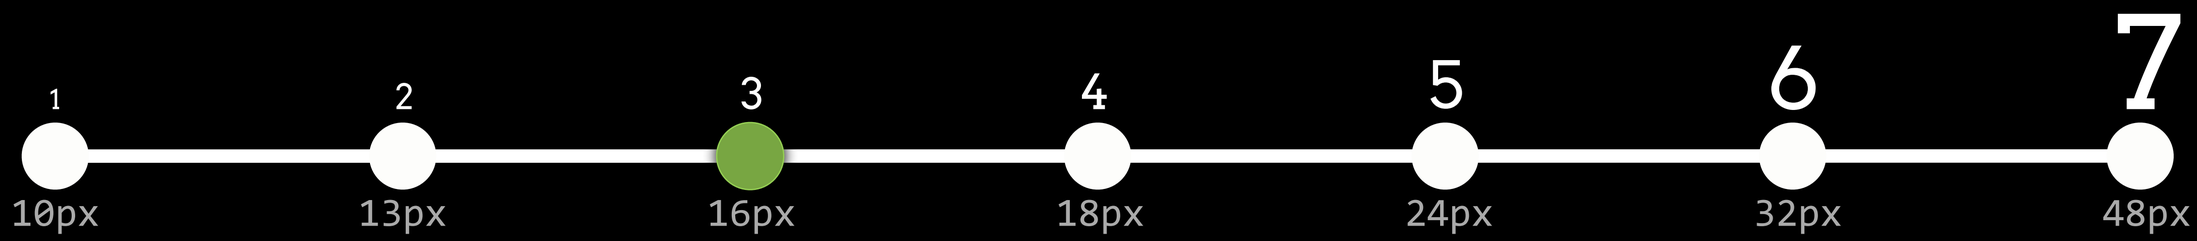
<HR SIZE=number>

The SIZE tag lets the author give an indication of how thick they wish the horizontal rule to be.

<HR WIDTH=number|percent>

The default horizontal rule is always as wide as the page. With the WIDTH tag, the author can specify an exact width in pixels, or a relative width measured in percent of document width.

<FONT>



<FONT SIZE=value>

Surprise! You can Change the font size. Valid values range from 1-7. The default font size is 3. The value given to size can optionally have a '+' or '-' character in front of it to specify that it is relative the the document basefont. The default basefont is 3, and can be changed with the BASEFONT element.

<BASEFONT SIZE=value>

This changes the size of the BASEFONT that all relative font changes are based on. It defaults to 3, and has a valid range of 1-7.

25 February 1993

I'd like to propose a new, optional HTML tag:

IMG

Required argument is SRC="url".

This names a bitmap or pixmap file for the browser to attempt to pull over the network and interpret as an image, to be embedded in the text at the point of the tag's occurrence.

An example is:

<IMG SRC="file://foobar.com/foo/bar/blargh.xbm">

(There is no closing tag; this is just a standalone tag.)

I know Adobe are trying to establish their own postscript-based "PDF" which will have links, and be readable by their proprietory brand of viewers.

I thought that a generic overlaying language for anchors (Hytime based?) would allow the hypertext and the graphics/video standards to evolve separately, which would help both.

Let the IMG tag be INCLUDE and let it refer to an arbitrary document type. Or EMBED if INCLUDE sounds like a cpp include which people will expect to provide SGML source code to be parsed inline -- not what was intended.

Tim BL

So, we're probably going to go with <IMG SRC="url"> (not ICON, since not all inlined images can be meaningfully called icons). For the time being, inlined images won't be explicitly content-type'd; down the road, we plan to support that (along with the general adaptation of MIME). Actually, the image reading routines we're currently using figure out the image format on the fly, so the filename extension won't even be significant.

Cheers,

Marc

Sometime in late summer I took a break with some of the other engineers and went to a local bar on Castro street in Mountain View. At some point in the evening I mentioned that it was sad that Lynx was not going to be able to display many of the HTML extensions that we were proposing...

<BLINK>

...I also pointed out that the only text style that Lynx could exploit given its environment was blinking text. We had a pretty good laugh at the thought of blinking text, and talked about blinking this and that and how absurd the whole thing would be.

<BLINK>

Saturday morning rolled around and I headed into the office only to find what else but, blinking text. It was on the screen blinking in all its glory, and in the browser... It turns out that one of the engineers liked my idea so much that he left the bar sometime past midnight, returned to the office and implemented the <blink> tag overnight. He was still there in the morning and quite proud of it.

—Lou Montulli

montulli.org/theoriginofthe<blink>tag

<MARQUEE>

Not to be outdone, Microsoft echoed back a few months later with their own effect-based HTML tag: <marquee>. Unlike the <blink> tag, when text was placed in a <marquee> tag it would scroll along the page. It is not a matter of public record whether this too was originally thought of in a bar, but one could at least hazard a guess.

—Jay Hoffman

<BODY BGCOLOR="">

What were the biggest stories of the year?

It's a question journalists like to ask themselves at the end of every year. Now you can join in the process. Here are our selections for the top ten news stories of 1996.

Disagree with our choices? Then tell us what stories you think were most compelling in the poll below.

TOP 10 STORIES OF 1996

1. **Israel** elects **Netanyahu**
2. Crash of **TWA** Flight 800
3. **Russia** elects **Yeltsin**
4. **U.S.** elects **Clinton**
5. **Hutu-Tutsi** conflict in central Africa
6. Peace, elections in **Bosnia**
7. **U.S.** base bombed in **Saudi Arabia**
8. Centennial **Olympic** Games
9. Advances against **AIDS**
10. **Unabomb** suspect **Ted Kaczynski** arrested

The top 10 stories according to our users

<title>Overview of the Web</title>
<h1>General Overview</h1>
There is no "top" to the World-Wide Web.
You can look at it from many points of view.
If you have no other bias, here are some ways of looking for
information.
<DL>
<DT><a href=bySubject/Overview.html>by Subject</a>
<DD>A classification by subject of interest. Incomplete
but easiest to use.
<DT><a href=ByAccess.html>by Type</a>
<DD>Looking by type of service (access protocol, etc)
may allow to find things if you know what you are looking for.
</DL>
If you have to use a "top" node, we recommend either this node
or the subject list.
See also: <a href=../WWW/TheProject.html>About the W3 project</a>.
```

PLAINTEXT

Proust's Pride

"À la recherche du temps perdu" consists of seven volumes totaling around 3,200 pages and featuring more than 2,000 characters. André Gide was initially not so taken with his work. The first volume was refused by the publisher Gallimard on Gide's advice. He later wrote to Proust apologizing for his part in the refusal and calling it one of the most serious mistakes of his life.

```
Proust died before he was able to complete his revision
of the drafts and proofs of the final volumes, the last
three of which were published posthumously and edited by
his brother <a href="/wiki/Robert_Proust">Robert</a>.
