## Double Pendulum

A double pendulum consists of one [pendulum](#) attached to another. Double pendula are an example of a simple physical system which exhibit [chaotic](#)  behavior. Consider a double bob pendulum with masses  $m_1$  and  $m_2$  attached by rigid massless wires of lengths  $l_1$  and  $l_2$ .

Further, let the angles the two wires make with the vertical be denoted  $\theta_1$  and  $\theta_2$ , as illustrated above. Finally, let [gravity](#) be given by  $g$ .

Then the positions of the bobs are given by

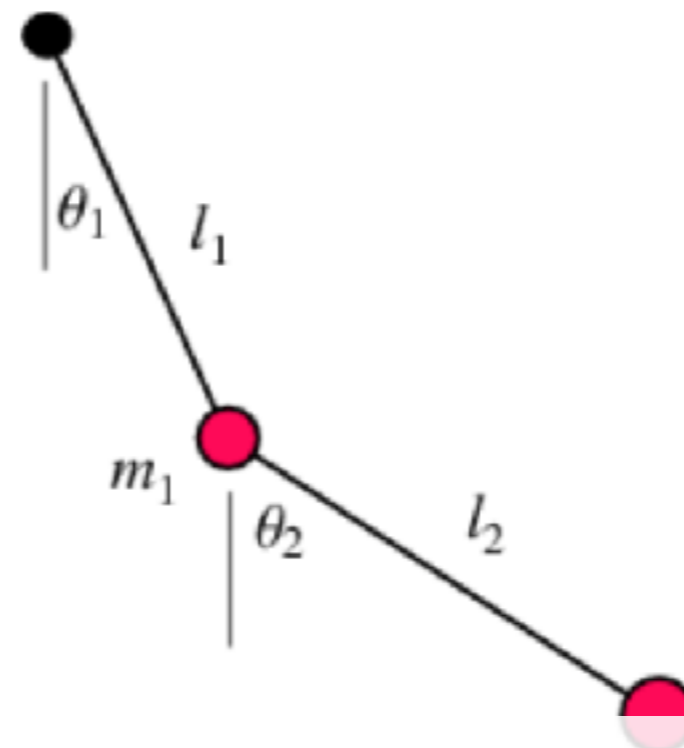

$$x_1 = l_1 \sin \theta_1$$

$$y_1 = -l_1 \cos \theta_1$$

$$x_2 = l_1 \sin \theta_1 + l_2 \sin \theta_2$$

[Animations](#) ► [Animated GIFs](#) ▼[Mechanics](#) ► [Pendula](#) ▼

## Double Pendulum

No matter how much math you throw at it, you can't actually predict what it's going to do.

A double pendulum consists of one [pendulum](#) attached to another. Double pendula are an example of a simple physical system which exhibit [chaotic](#) behavior. Consider a double bob pendulum with masses  $m_1$  and  $m_2$  attached by rigid massless wires of lengths  $l_1$  and  $l_2$ . Further, let the angles the two wires make with the vertical be denoted  $\theta_1$  and  $\theta_2$ , as illustrated above. Finally, let gravity be given by  $g$ . Then the positions of the bobs are given by

$$x_1 = l_1 \sin \theta_1$$

$$y_1 = -l_1 \cos \theta_1$$

$$x_2 = l_1 \sin \theta_1 + l_2 \sin \theta_2$$

## Simon Wheatcroft runs blind with help of a phone app

18 May 2016 Last updated at 00:00 BST

# This blind man is running a 155 mile ultra-marathon with the help of an IBM app

1.6K SHARE

COMMENTS [Start the Discussion](#)

Arjun Kharpal | @ArjunKharpal

Tuesday, 3 May 2016 | 8:27 AM ET

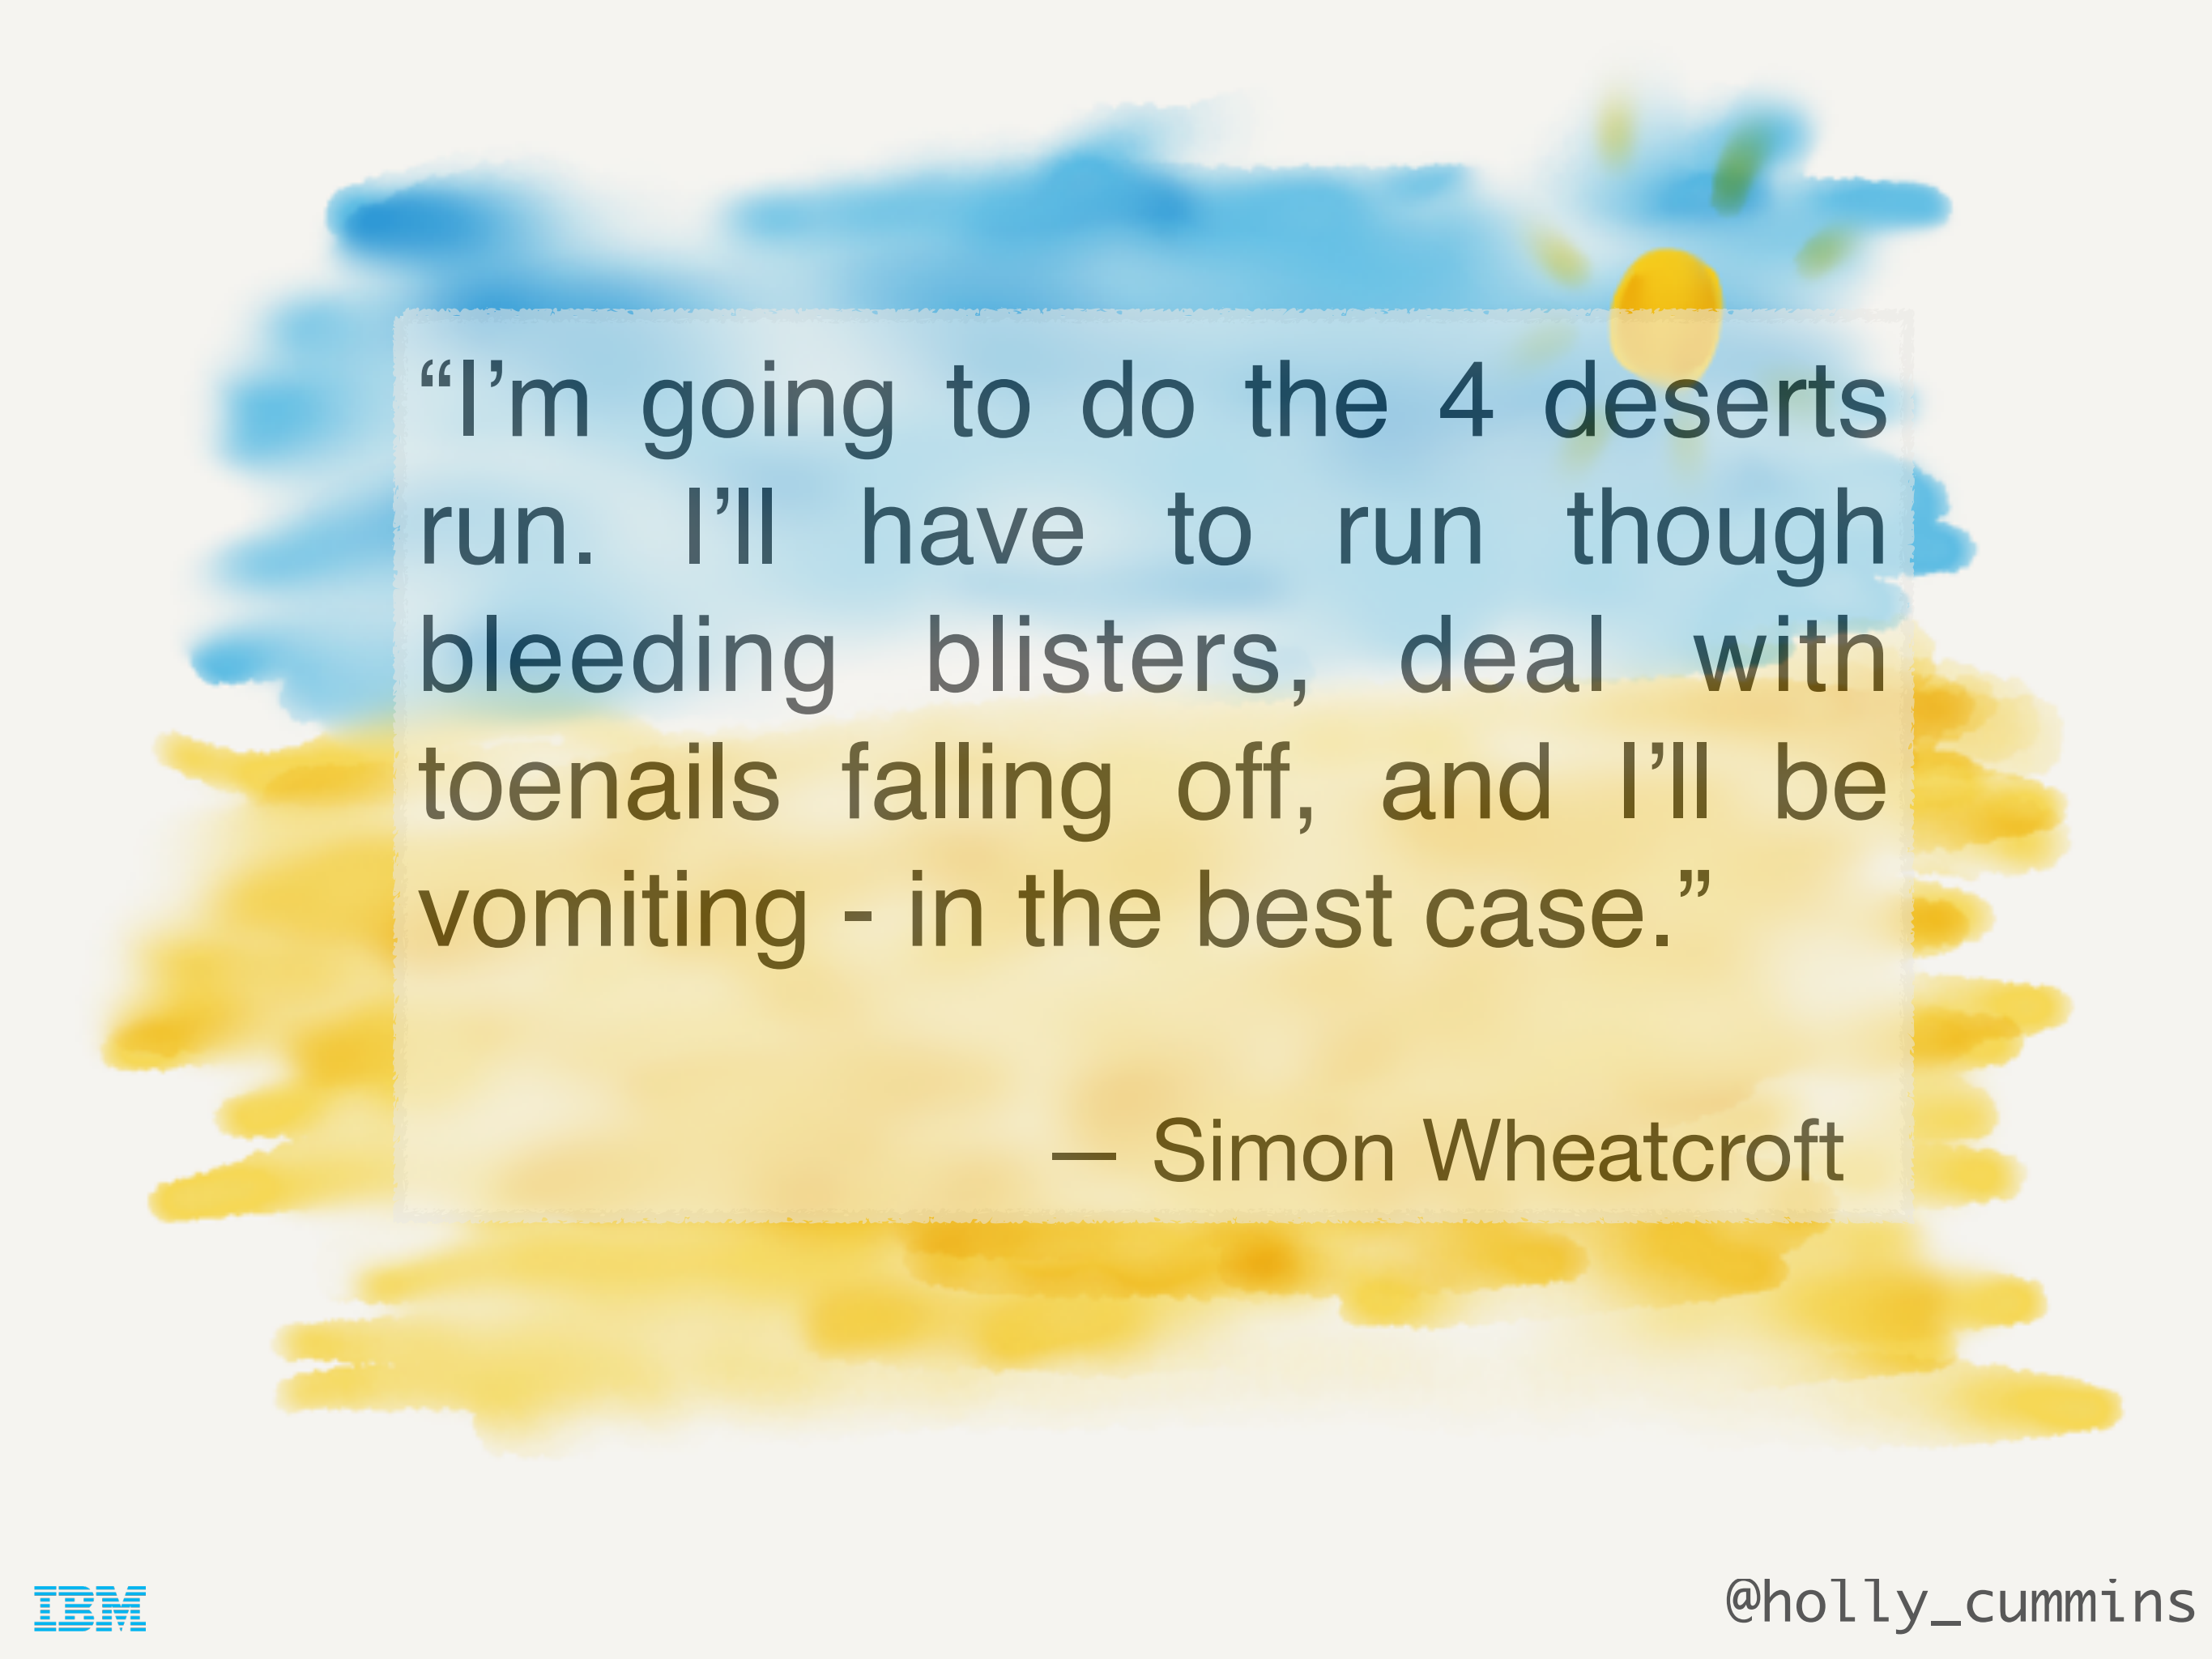

Simon Wheatcroft is completely blind. But that's not going to stop him running a 250 kilometer (155.3 mile) race in the desert.

## FROM THE WEB

Sponsored Links by Taboola

“I’m going to do the 4 deserts run. I’ll have to run through bleeding blisters, deal with toenails falling off, and I’ll be vomiting - in the best case.”

— Simon Wheatcroft

has play  
achieve

Wheatcroft did not let his blindness affect his life but is rather using the power of mobile applications in the modern world to achieve his goal. In the past one year, he had entered into a partnership with IBM to develop an app which would help him during his runs. The app would help notify him of any possible obstacles and keep him on pace with the rest.

Offline-First iOS Apps with Swift & Cloudbant Sync; Part 2: Sync to the Cloud

JASON H. SMITH / JUNE 8, 2016

Our Food Tracker series is complete! See: [Part 1](#) (local storage), [Part 2](#) (cloud sync), [Part 3](#) (UI updates).

This walkthrough is a sequel to Apple's well-known iOS programming introduction, [Start Developing iOS Apps \(Swift\)](#). Apple's introduction walks us through the process of building the UI, data, and logic of an example food tracker app, culminating with a section on data persistence: storing the app data as files in the iOS device.

This series picks up where that document leaves off: syncing data between devices, through the cloud, with an offline-first design. You will achieve this using open source tools and the IBM Cloudbant service.

This document is the second in the series, showing you how to sync the app data to Cloudbant. You can also review the previous post in the series, [Part 1: The Datastore](#).
