N C P Welcome to Hall Ings Car Park
BRADFORD CAPITAL OF CYCLING

Where's my nearest carpark with available spaces?

How many spaces are available in this car park?

💡Tell me when a car park with spaces is available

How does occupancy vary over time?

$ whoami

Bradford car parks

City of Bradford Metropolitan District Council

Resources from the City of Bradford Metropolitan District Council (CBMDC) Parking service.

1 - Car park locations
a simple csv containing name and location including latitude / longitude

2 - Car park current status.
API that returns a csv dataset of the current status of 8 Bradford city centre car parks. The dataset returns capacity, empty places, status together with location details.
The dataset is updated every 3 minutes for a live view of spaces in these car parks.

3 - Car park historic status
API that returns a csv dataset building up the historic status of the 8 city centre car parks.
The dataset is updated every 30 minutes.

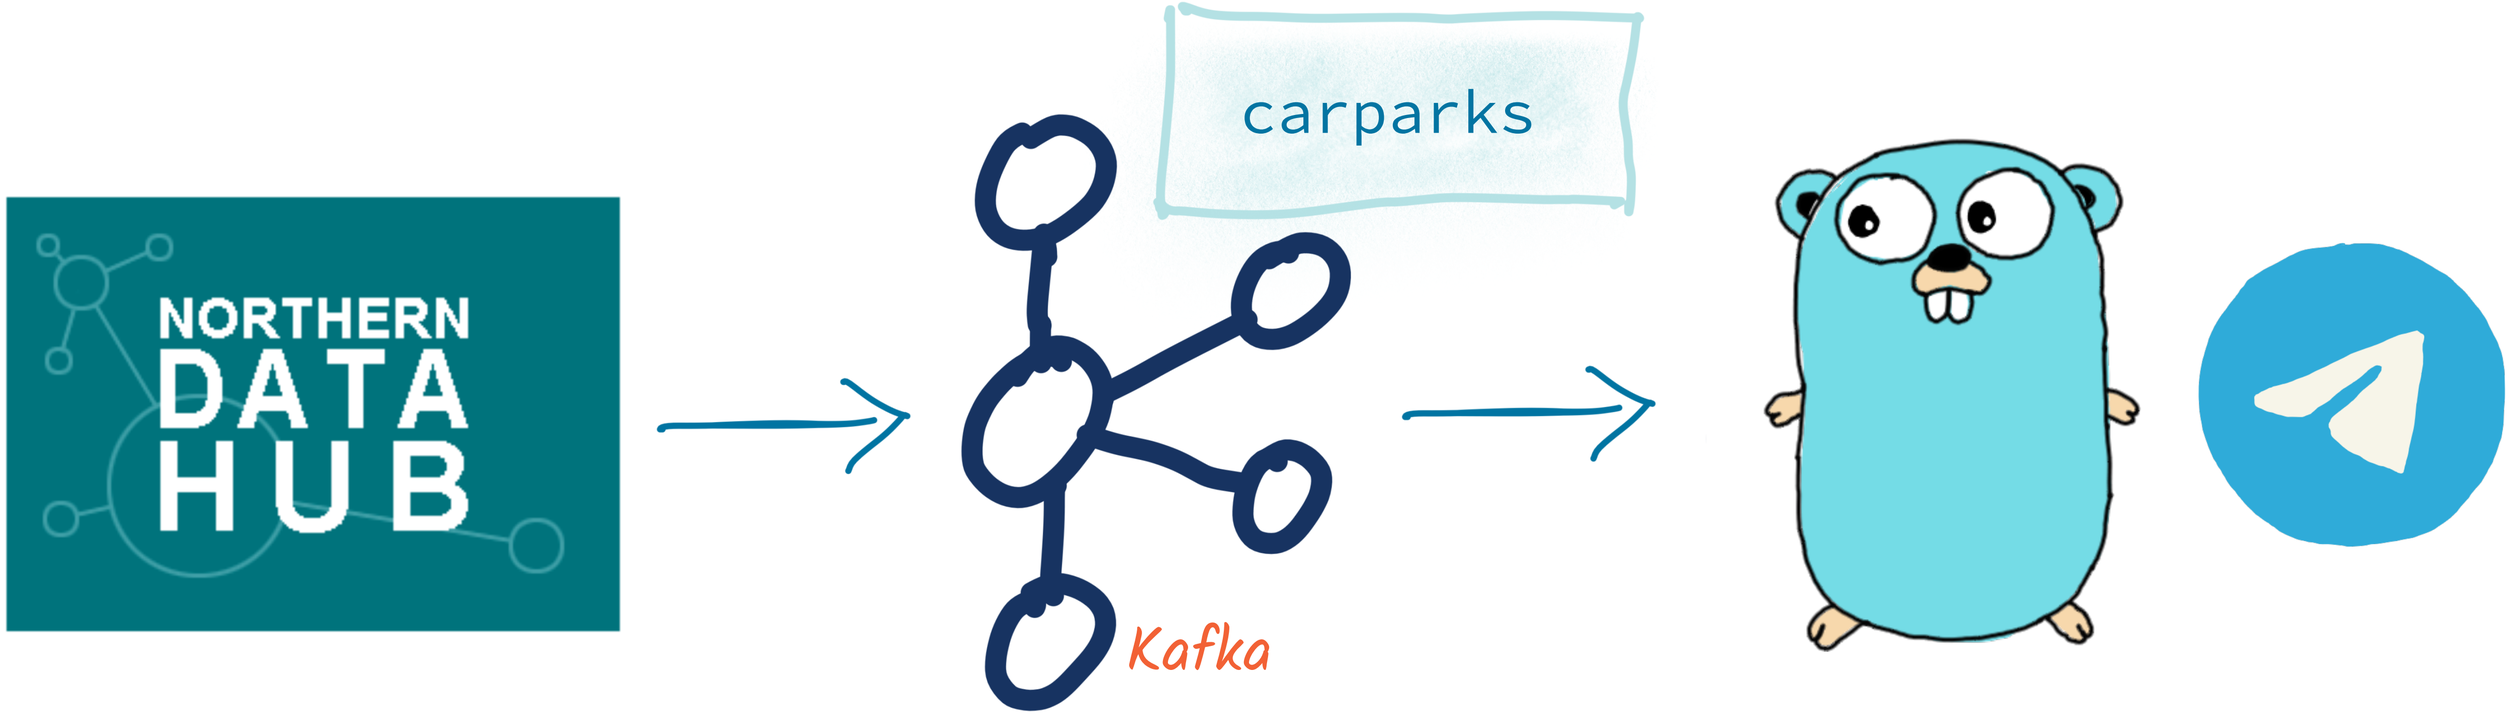
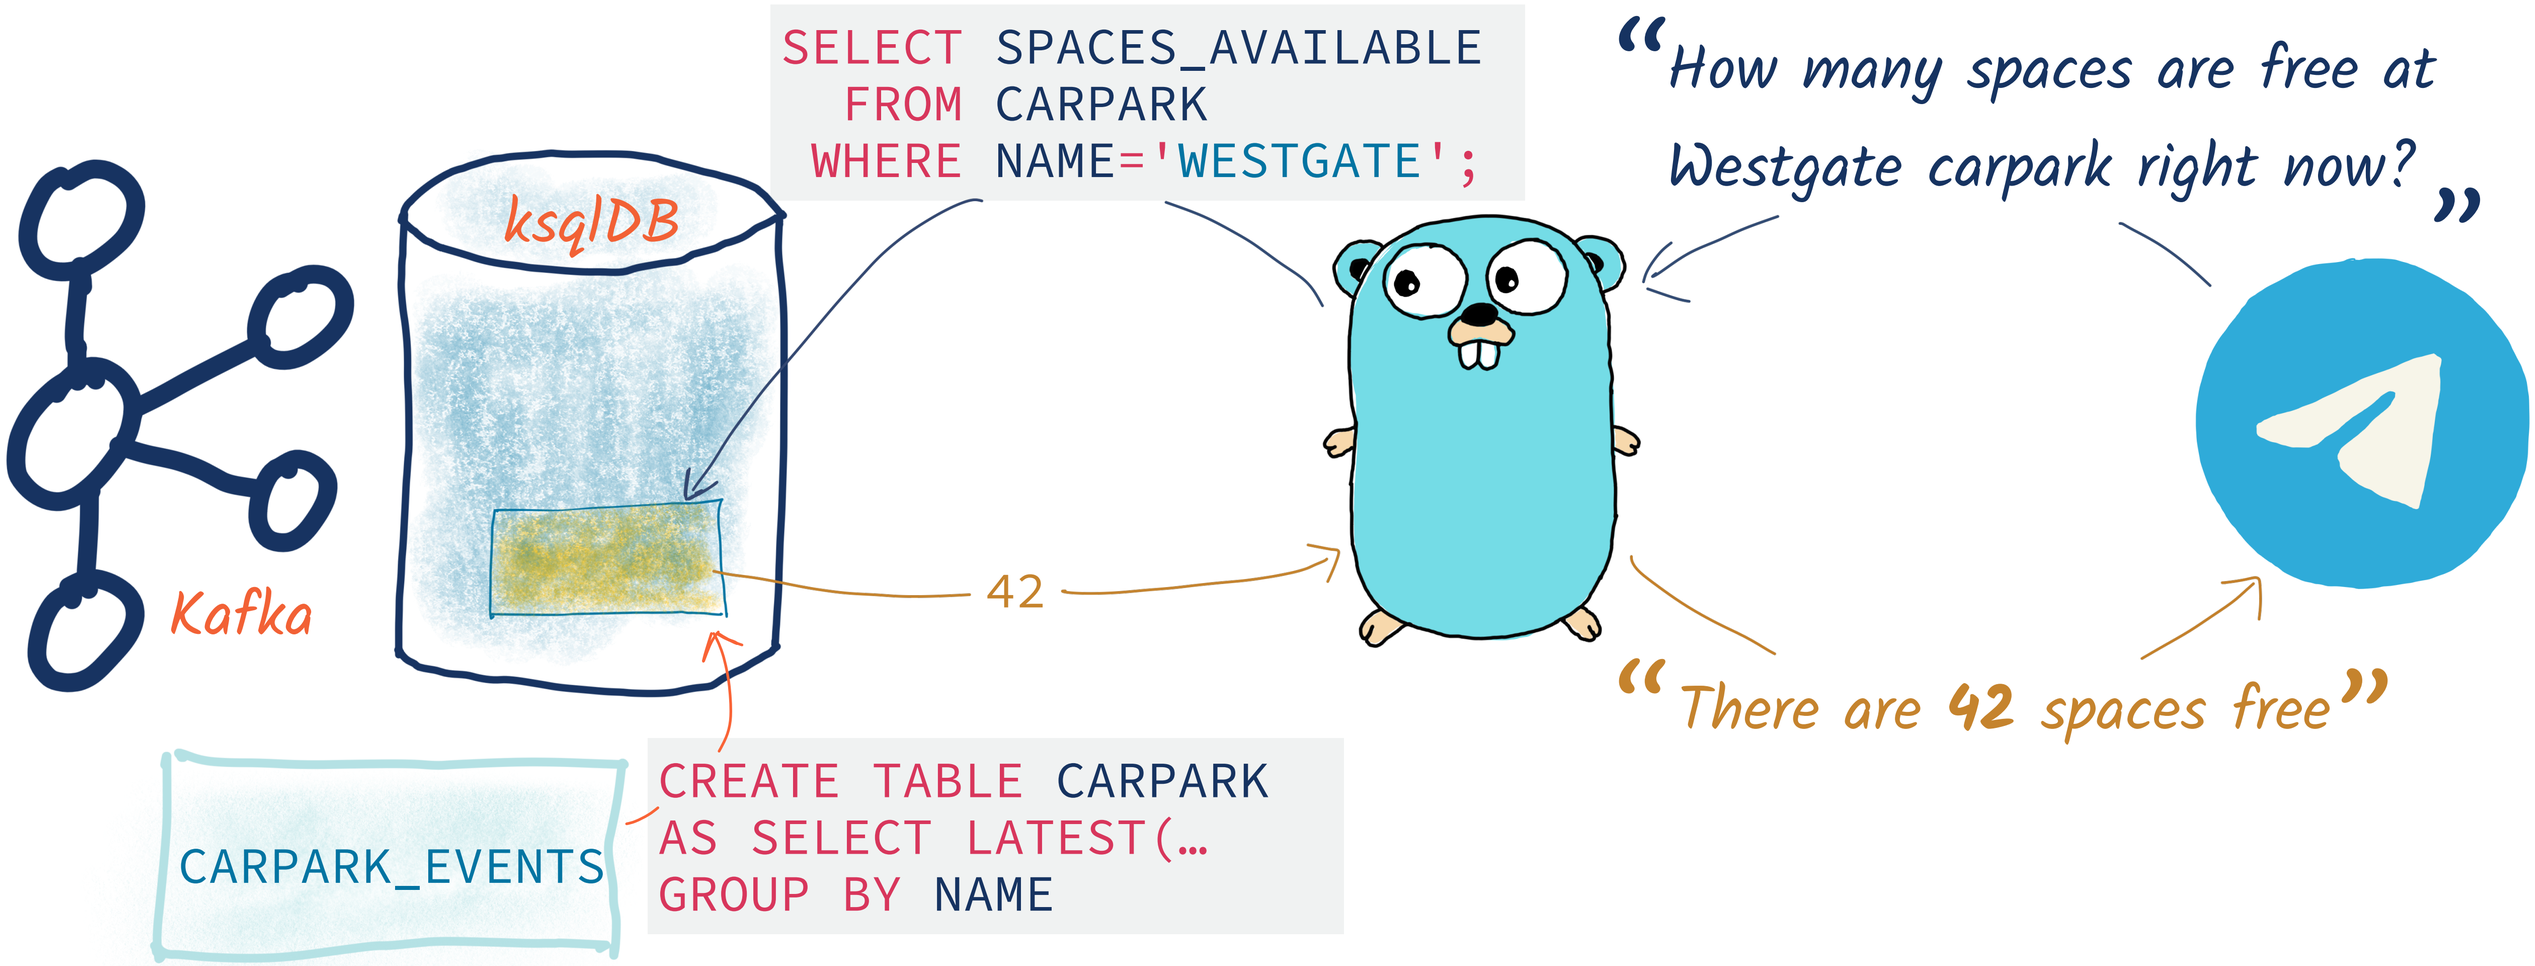
What are the key pieces of the design?

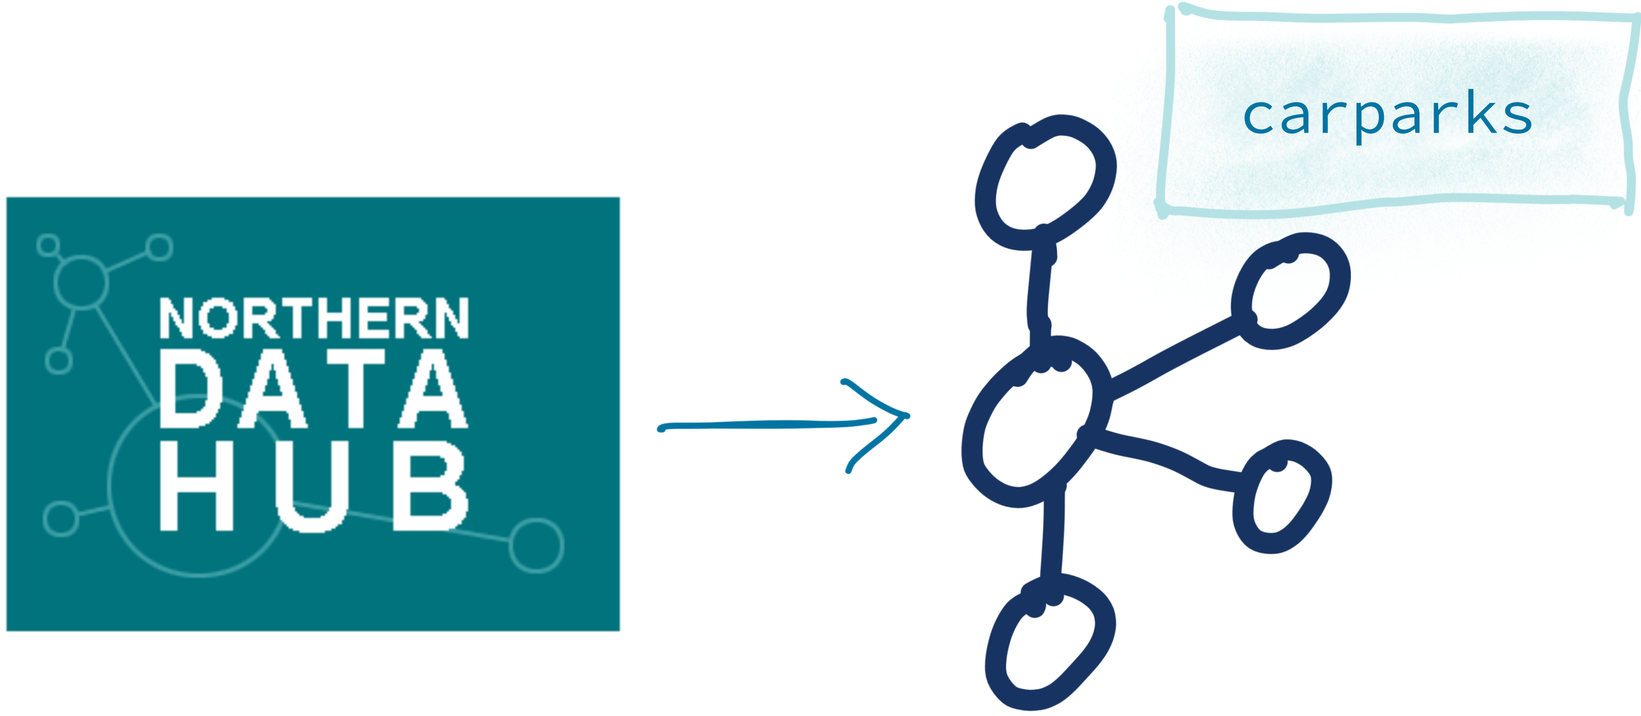
Event Driven Alerts



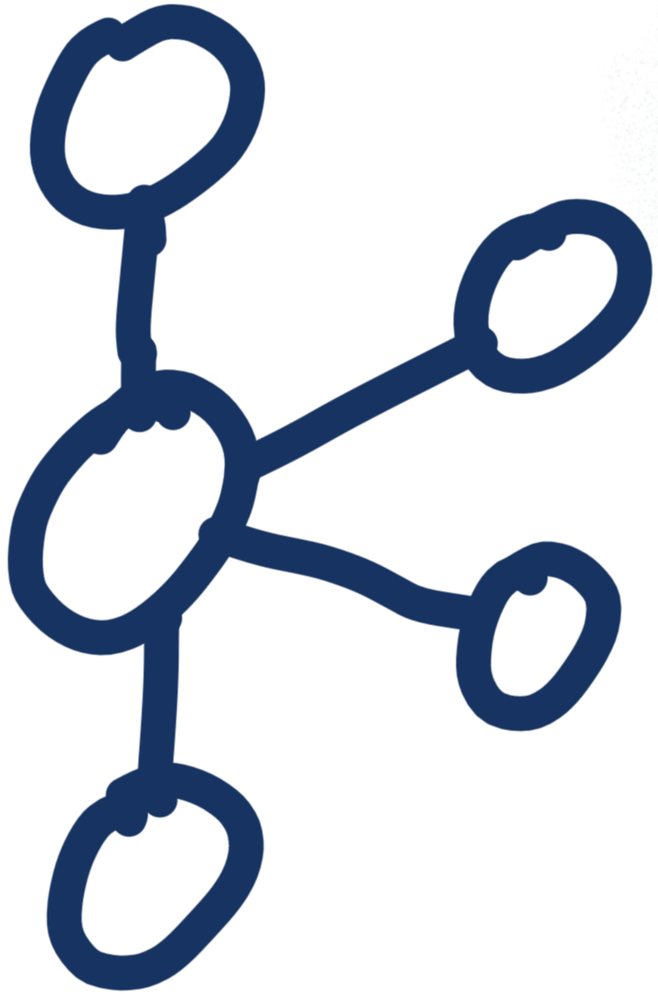
KN Lookups (materialised views)



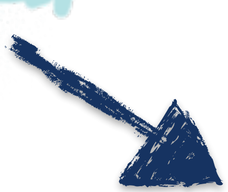
A schema...

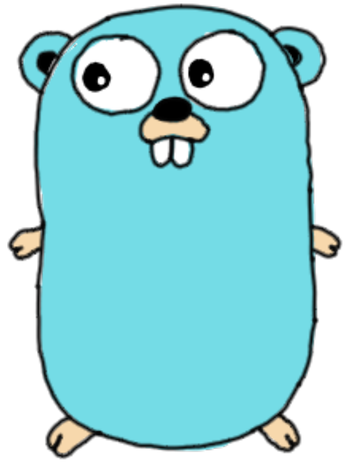


A schema...

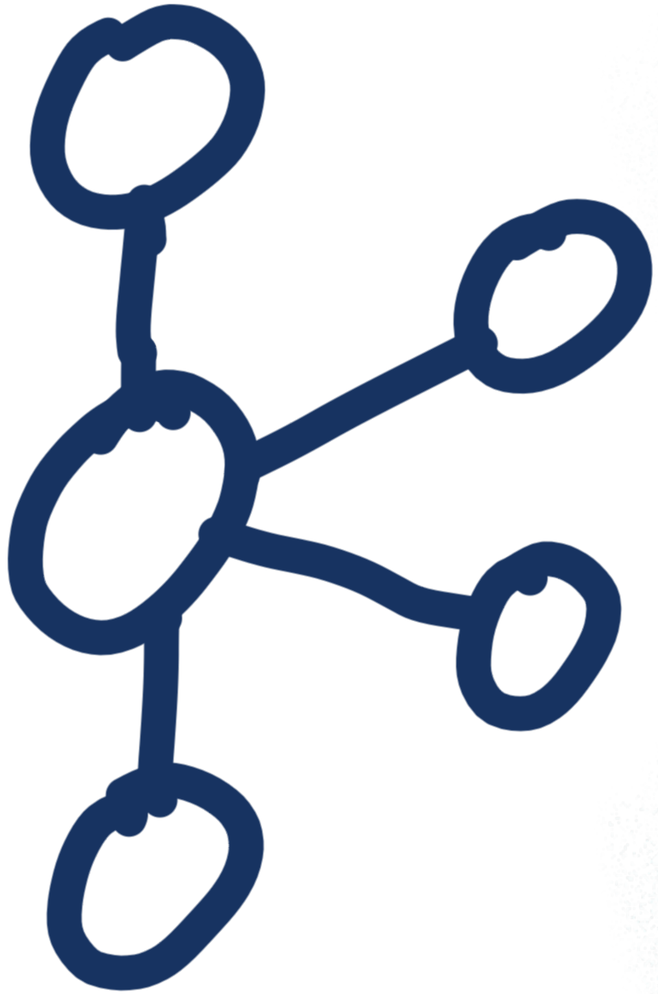


```
2020-10-14,12:28,Broadway,1132,921
2020-10-14,12:28,Kirkgate Centre,611,474
2020-10-14,12:28,Sharpe Street,98,63
```

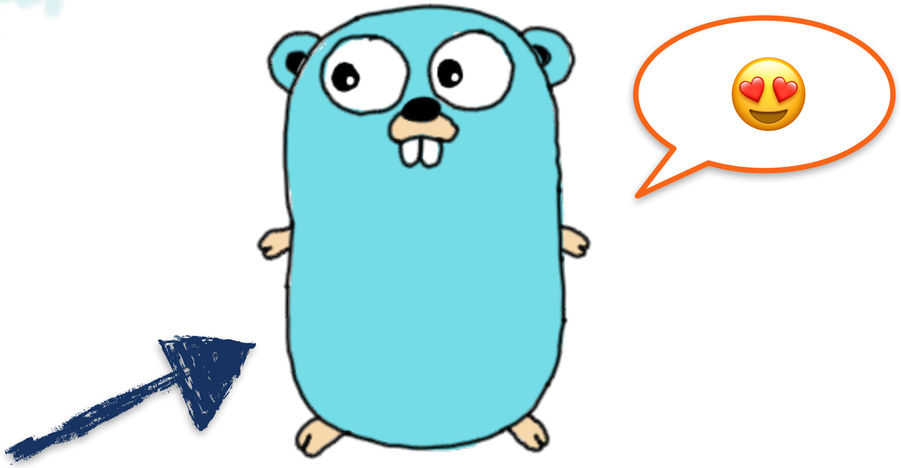




My kingdom for a schema!

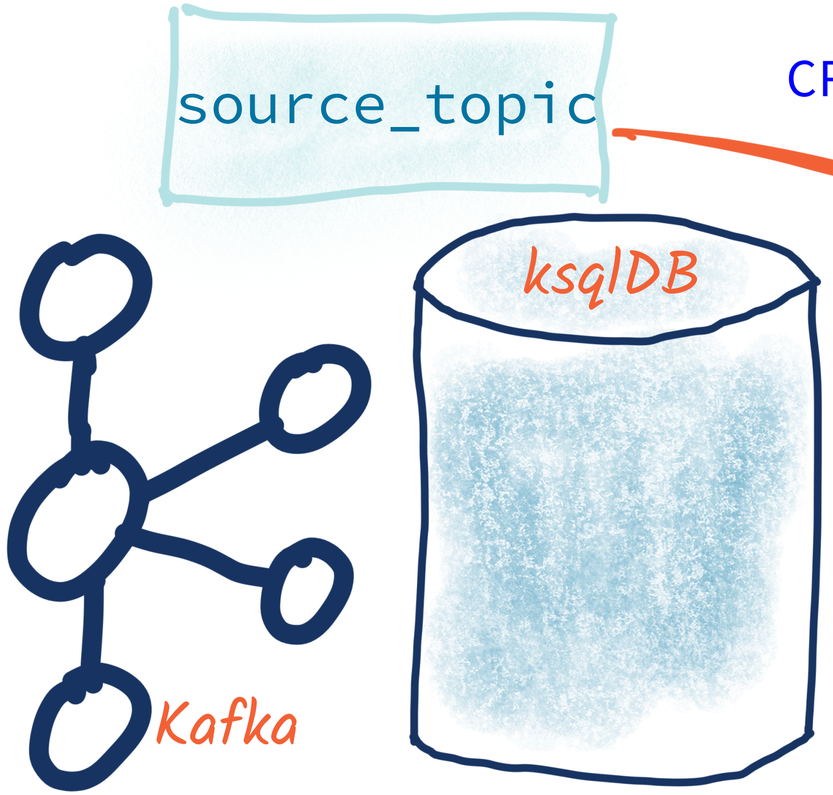


```
2020-10-14,12:28,Broadway,1132,921
2020-10-14,12:28,Kirkgate Centre,611,474
2020-10-14,12:28,Sharpe Street,98,63
```



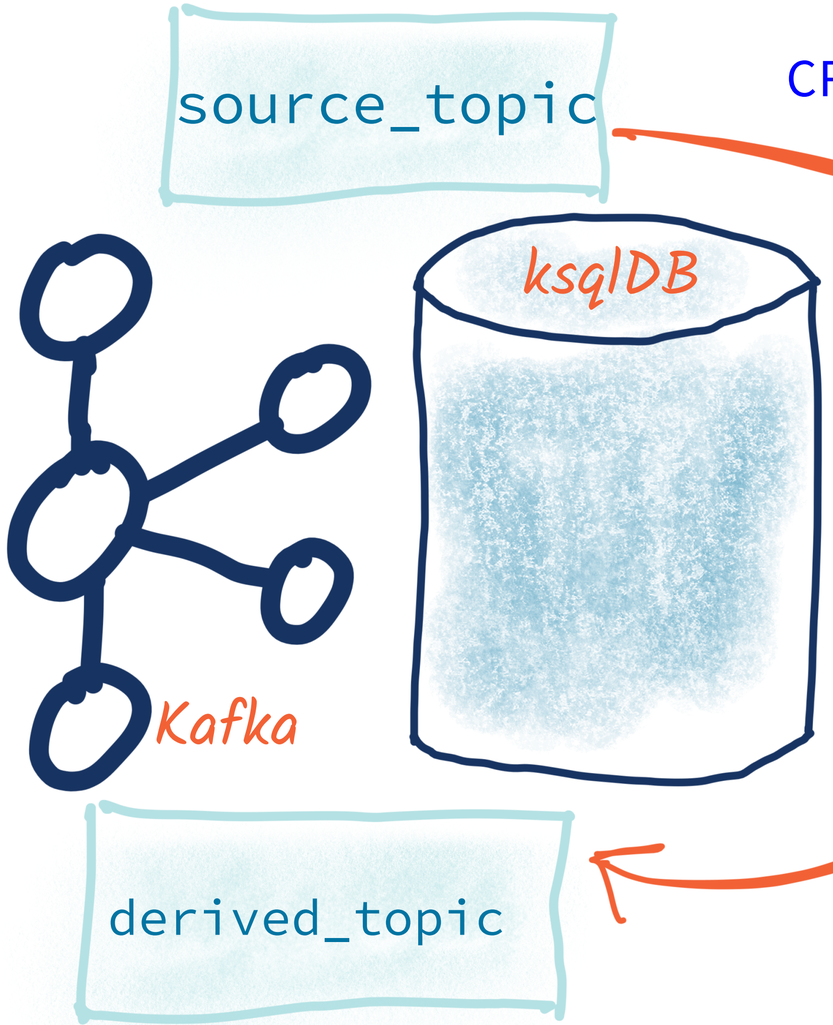
```
{
    "ts": "2020-10-14T12:28 UTC+1",
    "name": "Broadway",
    "capacity": 1132,
    "empty": 921
}
…
```

Applying a schema to streams of data



```
CREATE STREAM mySource (date            VARCHAR ,
                        time            VARCHAR ,
                        name            VARCHAR ,
                        capacity        INT )
  WITH (KAFKA_TOPIC='source_topic',
        VALUE_FORMAT='DELIMITED');
```

Applying a schema to streams of data



```
CREATE STREAM mySource (date            VARCHAR ,
                        time            VARCHAR ,
                        name            VARCHAR ,
                        capacity        INT )
    WITH (KAFKA_TOPIC='source_topic',
          VALUE_FORMAT='DELIMITED');
```

```
CREATE STREAM myTargetStream
WITH (VALUE_FORMAT='PROTOBUF',
      KAFKA_TOPIC='derived_topic') AS
SELECT  *
   FROM mySource;
```

Why build it this way?

Events

Streams of Events

We want to react to them as they happen

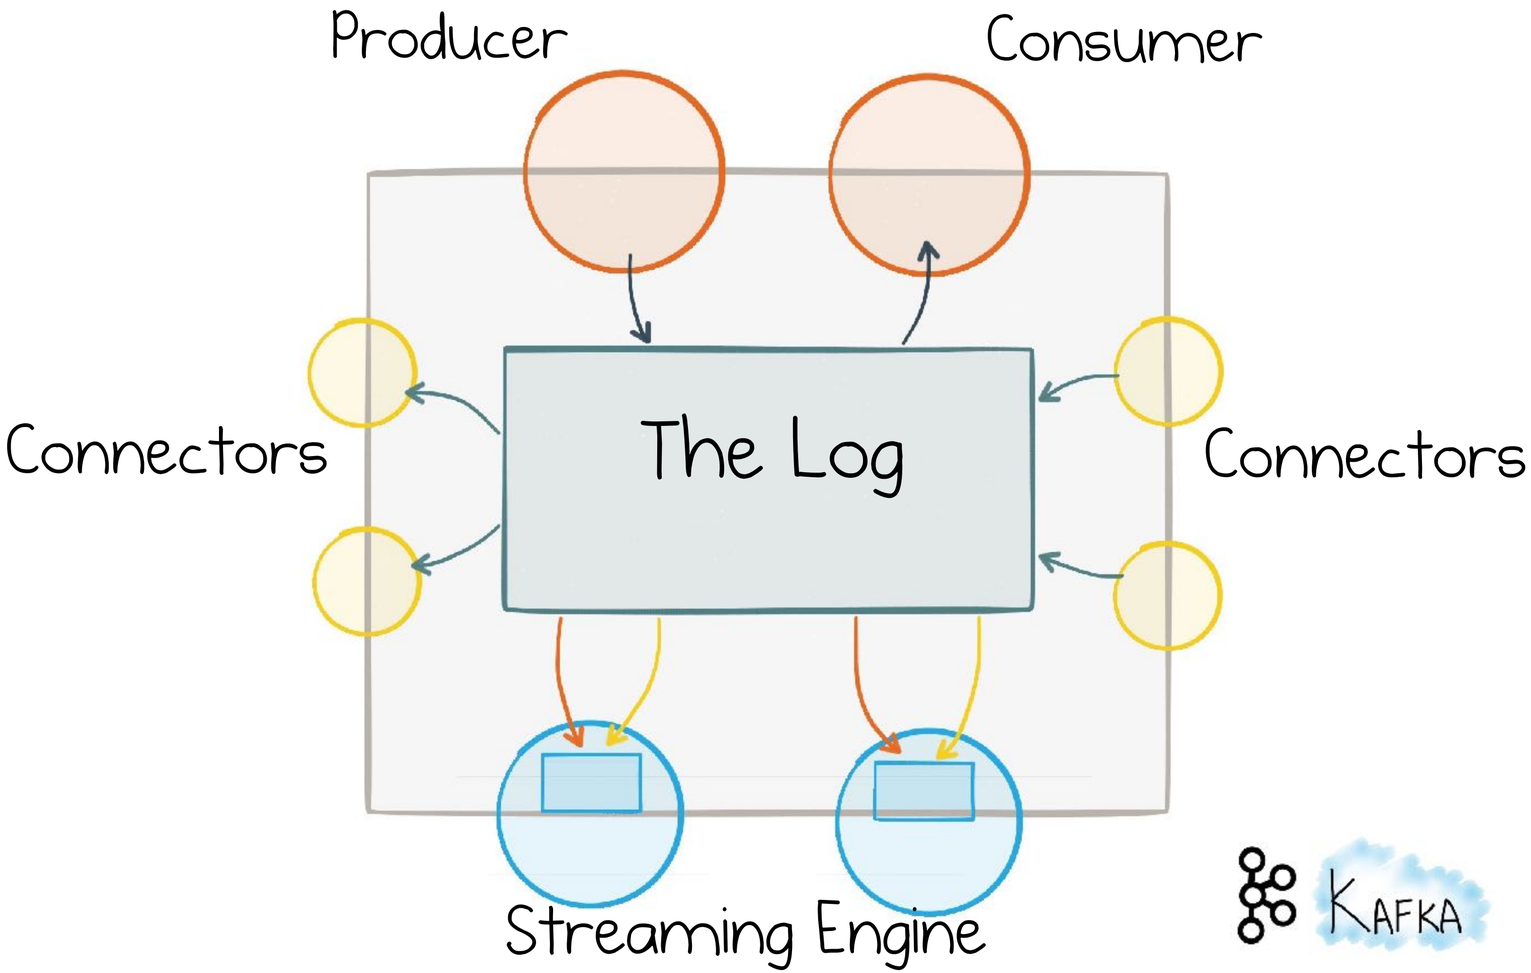
We want to build

state from a stream

of events

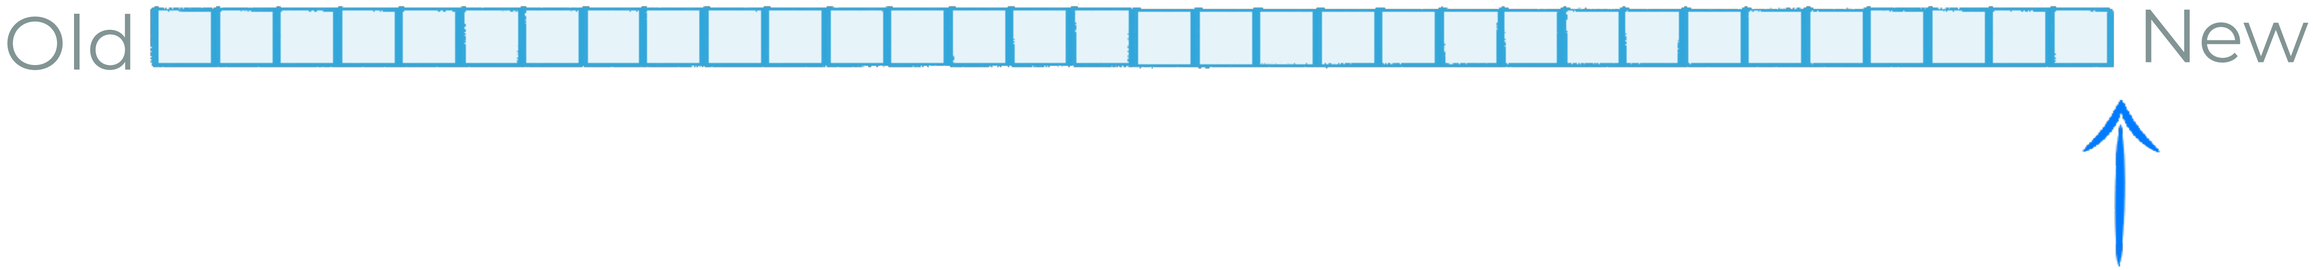
We want to provide the **latest** data in our analytics

Apache Kafka - an Event Streaming Platform



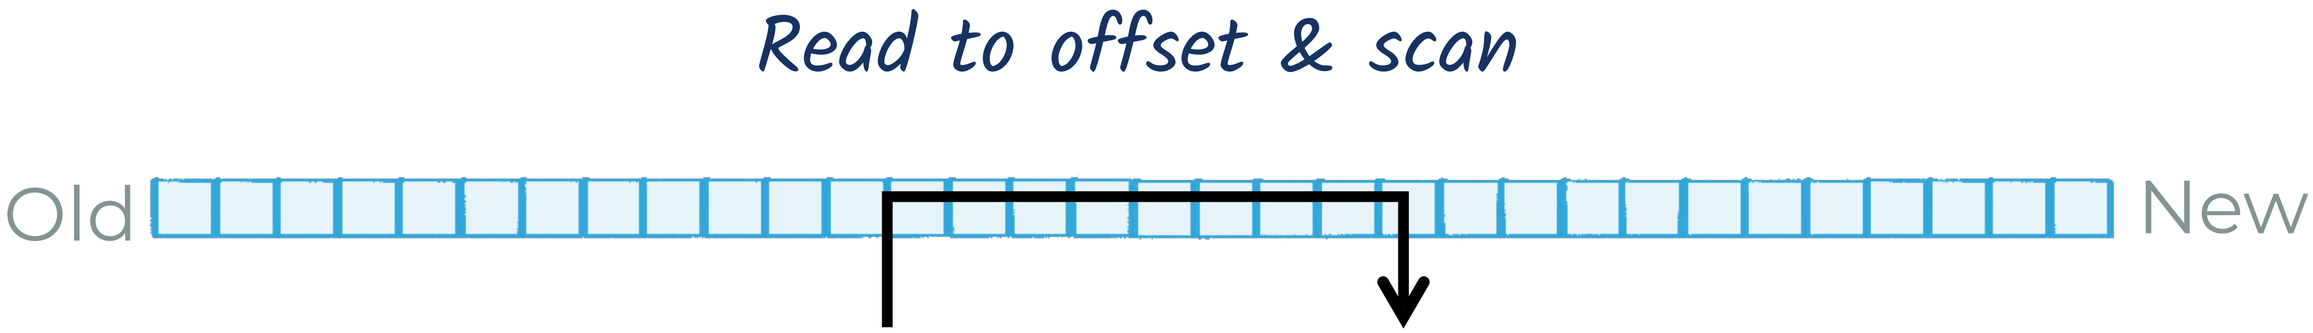
Why Kafka?

Distributed, Immutable, Event Log

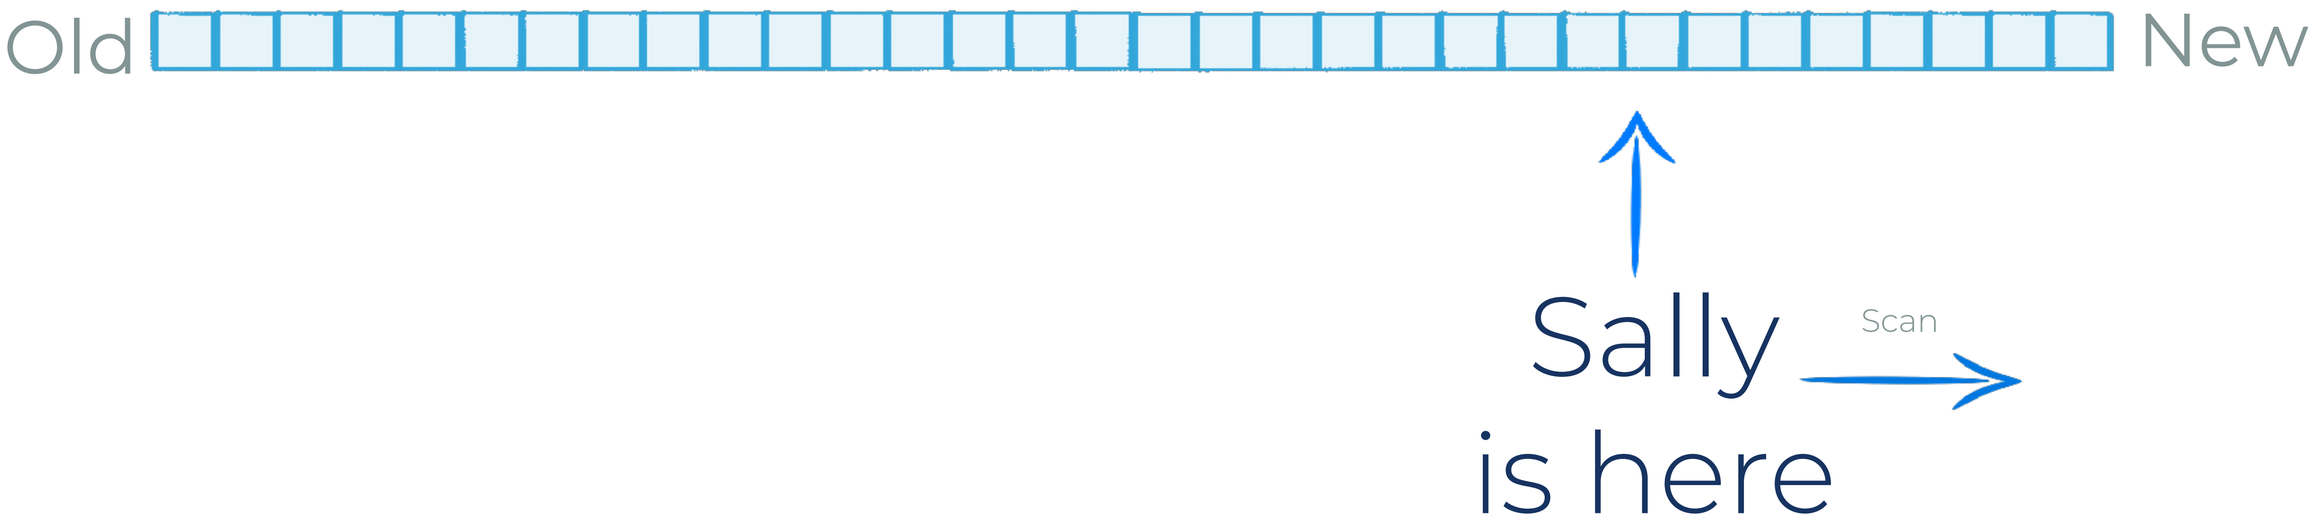


Events are added at the end of the log

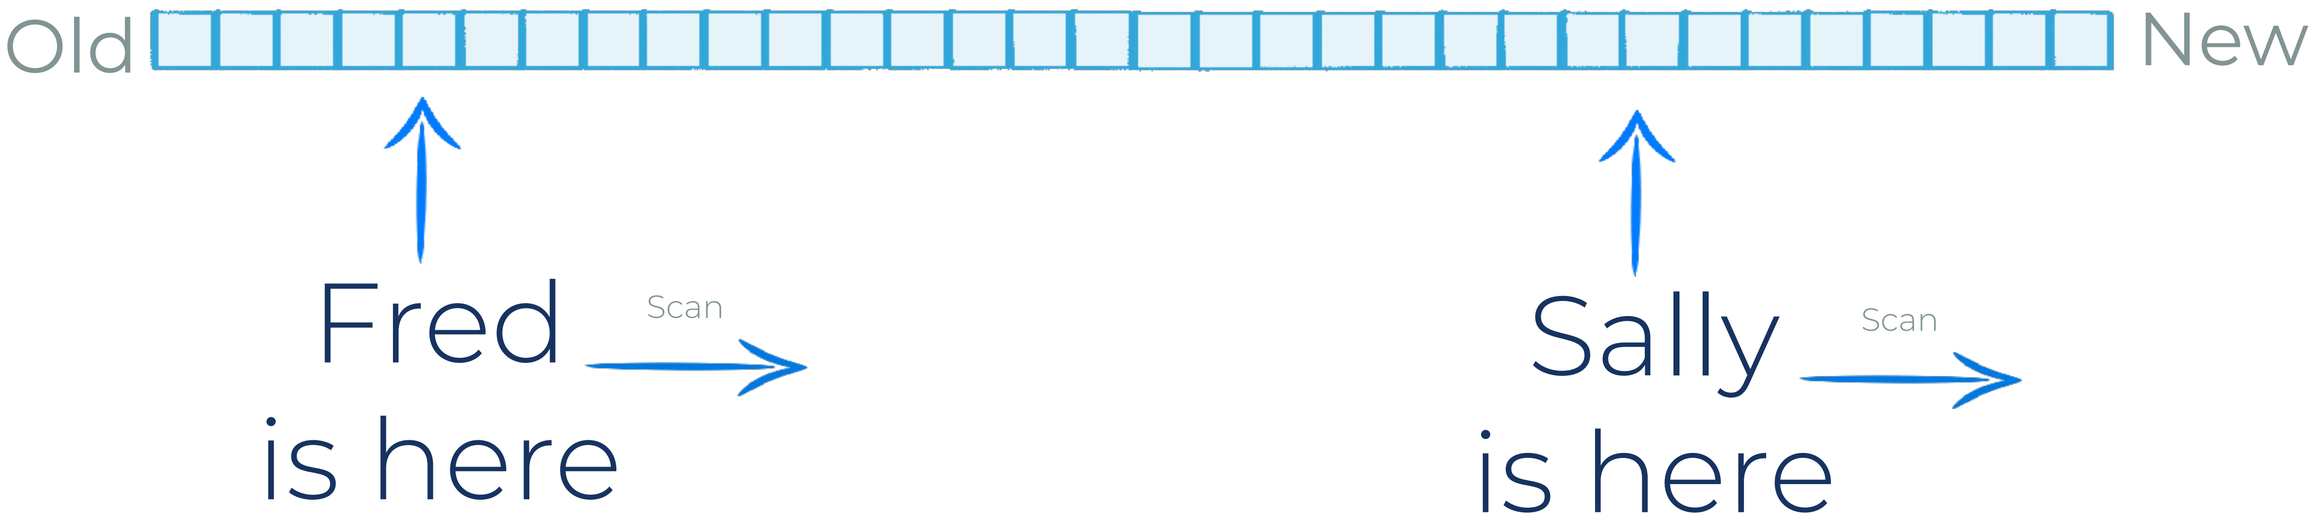
Consumers can seek to any point



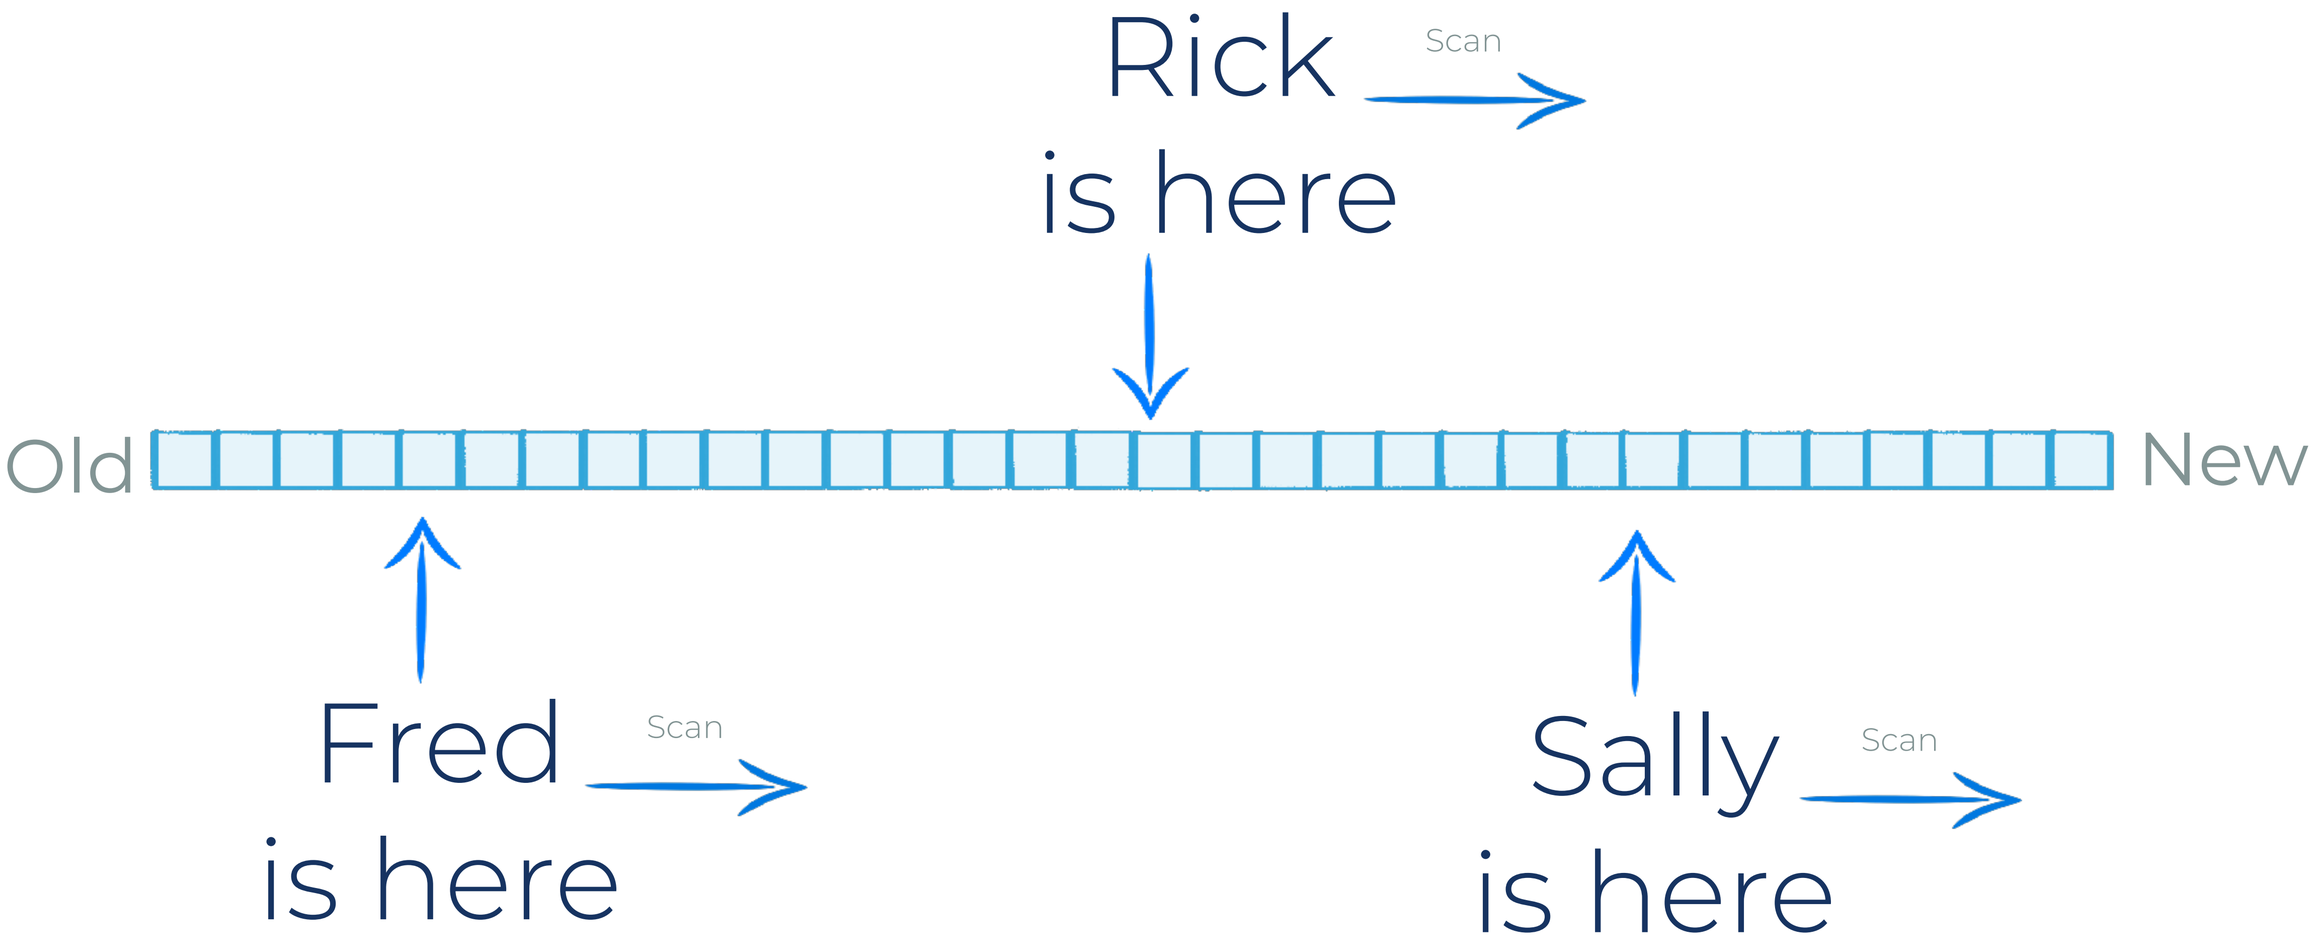
Data is not deleted once read



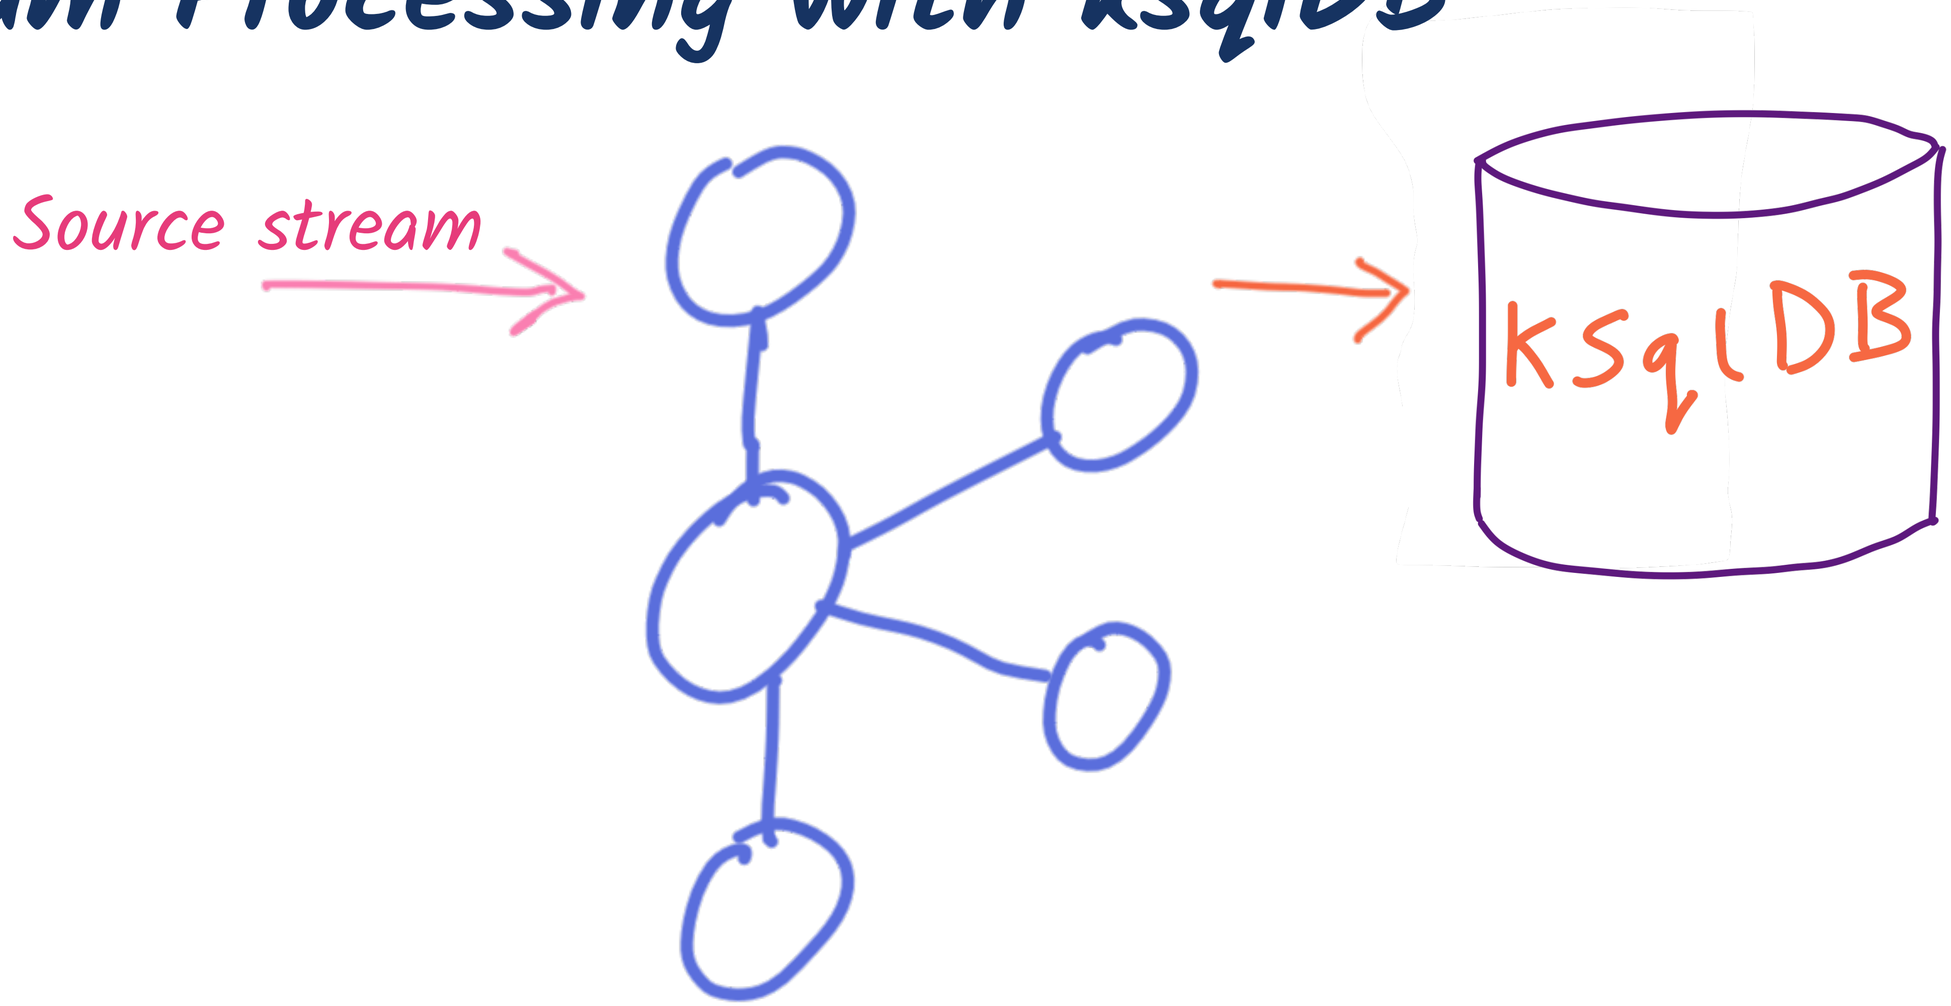
Consumers are independent of each other



Consumers can be added later



Stream Processing with ksqlDB



Stream Processing with ksqlDB
