

Search & Al: a new era

David Pilato | @dadoonet

Agenda

"Classic" search and its limitations
ML model and usage
Vector search or hybrid search in Elasticsearch
OpenAl's ChatGPT or LLMs with Elasticsearch

Elasticsearch

You Know, for Search

These are not the droids you are looking for.

GET / analyze { "char filter": ["html strip"], "tokenizer": "standard", "filter": ["lowercase", "stop", "snowball"], "text": "These are not the droids you are looking for."

```
These are <em>not</em> the droids you are looking for.
{ "tokens": [{
      "token": "droid",
      "start offset": 27, "end offset": 33,
      "type": "<ALPHANUM>", "position": 4
    },{
      "token": "you",
      "start offset": 34, "end offset": 37,
      "type": "<ALPHANUM>", "position": 5
    }, {
      "token": "look",
      "start offset": 42, "end offset": 49,
      "type": "<ALPHANUM>", "position": 7
    }]
```

Semantic search ≠ Literal matches S similar

YOU'RE COMPARING APPLES TO NECTARINES

TODAY

TOMORROW

What ships and crews do I need to destroy an Q almost finished death star? Or is there a secret weakness?

What is a **Vector**?

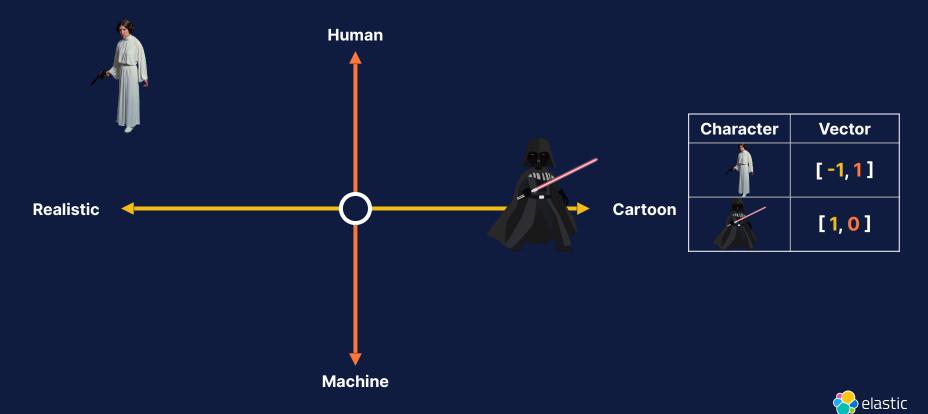

Embeddings represent your data Example: 1-dimensional vector

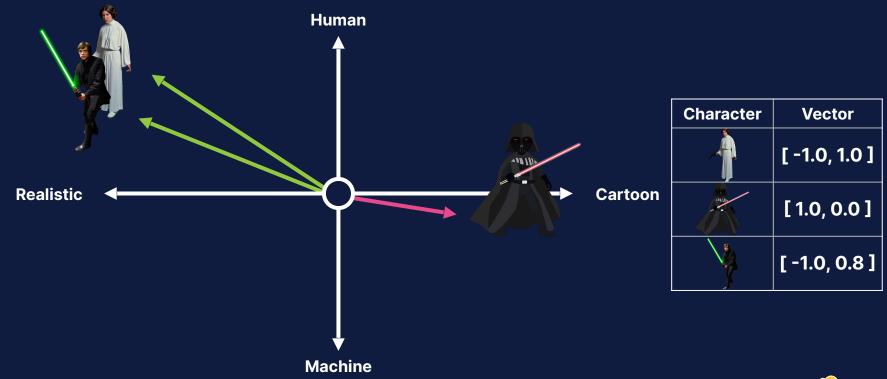

Multiple dimensions represent different data aspects

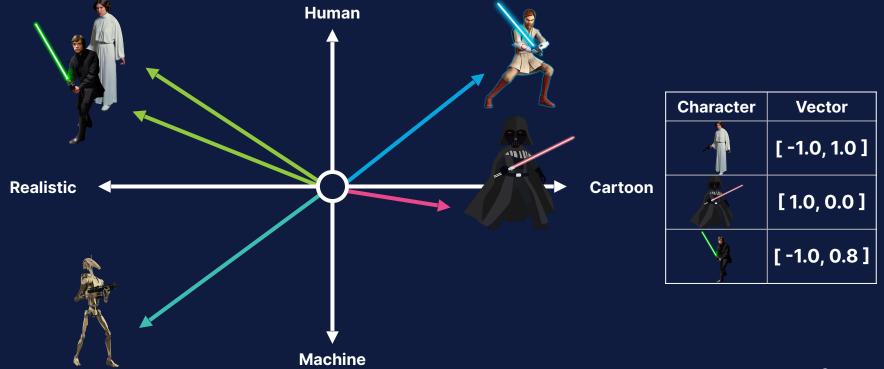

Similar data is grouped together

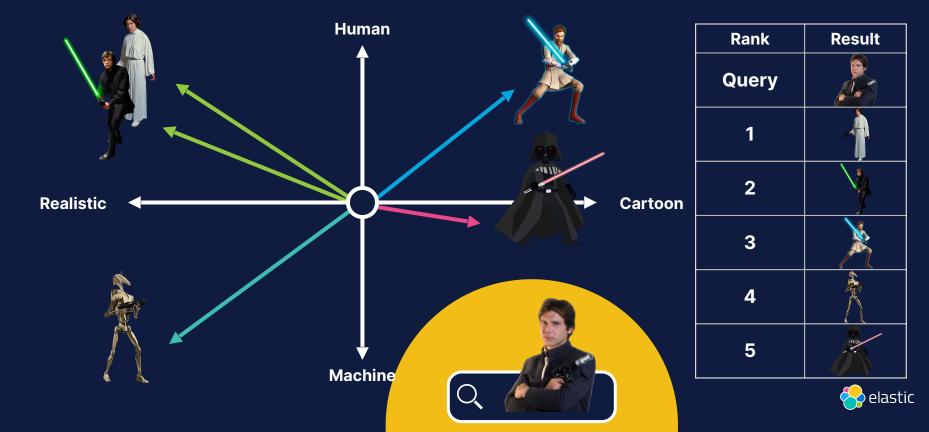

Similar data is grouped together

Vector search ranks objects by similarity (~relevance) to the query

Choice of Embedding Model

Start with Off-the Shelf Models

Extend to Higher Relevance

Text data: Hugging Face (like Microsoft's E5)

Images: OpenAl's CLIP

 Apply hybrid scoring
 Bring Your Own Model: requires expertise + labeled data

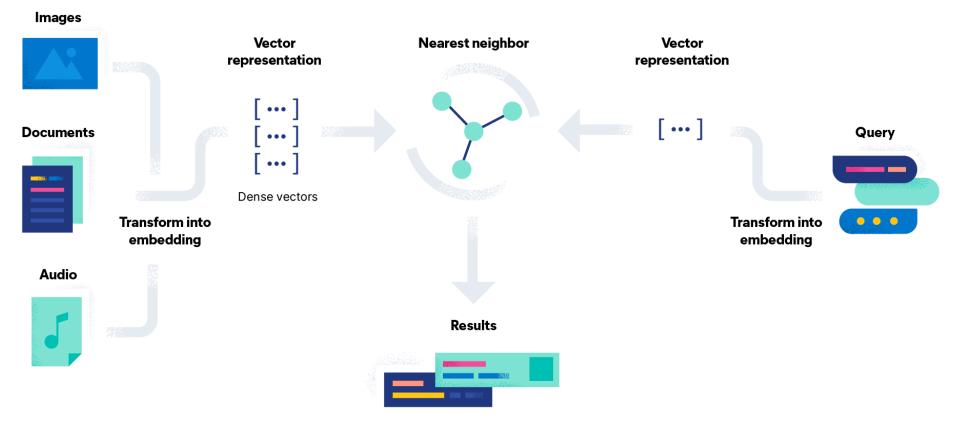

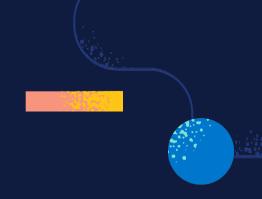

Problem training vs actual use-case

Architecture of Vector Search

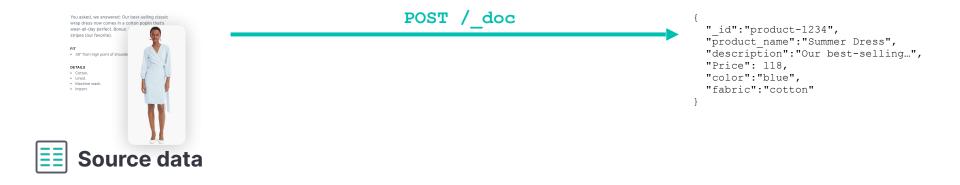

How do you index vectors?

Elastic's range of supported NLP models

Fill mask model

Mask some of the words in a sentence and predict words that replace masks

Named entity recognition model

NLP method that extracts information from text

• Text embedding model

Represent individual words as numerical vectors in a predefined vector space

Text classification model

Assign a set of predefined categories to open-ended text

Question answering model

Model that can answer questions given some or no context

Zero-shot text classification model

Model trained on a set of labeled examples, that is able to classify previously unseen examples

Third party fill-mask models . How do you search vectors?

Vector Search components

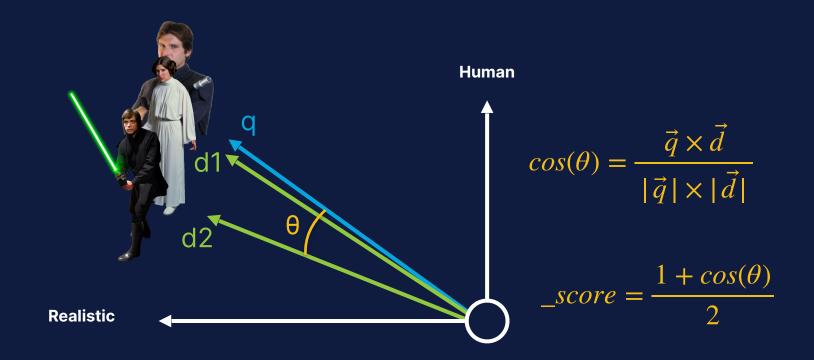

But how does it

really work?

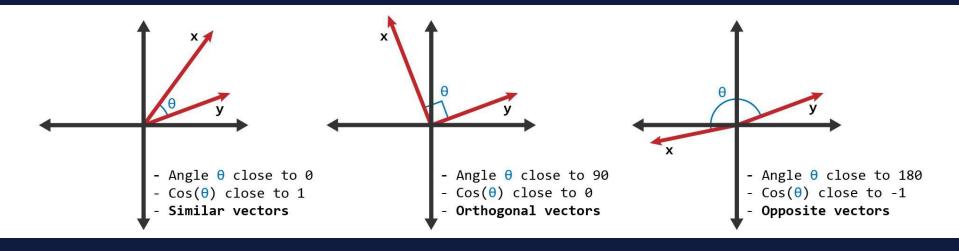

Similarity: cosine (cosine)

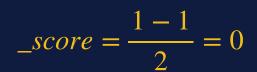

Similarity: cosine (cosine)

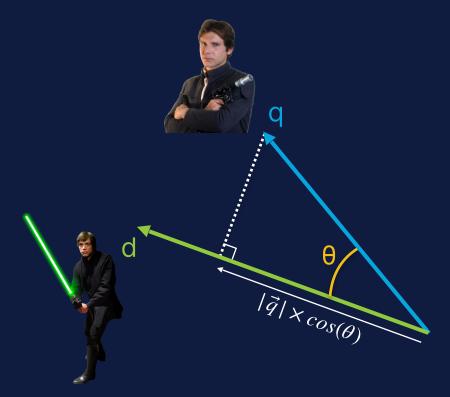

$$_score = \frac{1+1}{2} = 1$$

$$_score = \frac{1+0}{2} = 0.5$$

Similarity: Dot Product (dot_product)

 $\vec{q} \times \vec{d} = |\vec{q}| \times cos(\theta) \times |\vec{d}|$

$$_score_{float} = \frac{1 + dot_product(q, d)}{2}$$
$$_score_{byte} = \frac{0.5 + dot_product(q, d)}{32768 \times dims}$$

Similarity: Euclidean distance (12_norm)

$$l2_norm_{q,d} = \sqrt{\sum_{i=1}^{n} (x_i - y_i)^2}$$
$$_score = \frac{1}{1 + (l2_norm_{q,d})^2}$$

Brute Force

Hierarchical Navigable Small Worlds (HNSW) One popular approach

HNSW: a layered approach that simplifies access to the nearest neighbor

Tiered: from coarse to fine approximation over a few steps

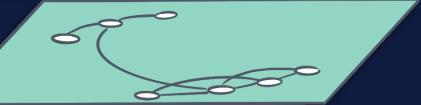

Balance: Bartering a little accuracy for a lot of scalability

Speed: Excellent query latency on large scale indices

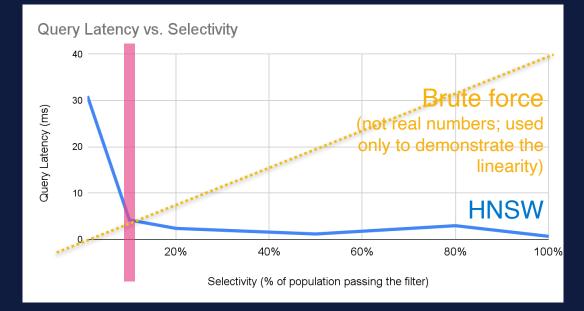

Filtering KNN Vector Similarity Automatically choose between brute force and HNSW

Bound worst case to 2*(brute force)

- Brute force scales O(n) of filtered
- HNSW scales ~O(log(n)) of all docs

Elasticsearch + Lucene = fast progress 🤎

Increase max number of vector dims to 2048 #95257 °∿ № Increase the max vector dims to 4096 #99682 °⊷ Merged mayya-sharipova merged 2 commits into elastic:main from mayya-sharipova:increase_vector_dims_4096 [or D) D Conversation 5 -O- Commits 2 🗊 Checks 0 Files changed 8 mayya-sharipova commented on Sep 19 Contributor . . . Scaling Vector Search

Vector search

- 1. Needs lots of memory
- 2. Indexing is slower
- 3. Merging is slow
- * Continuous improvements in Lucene + Elasticsearch

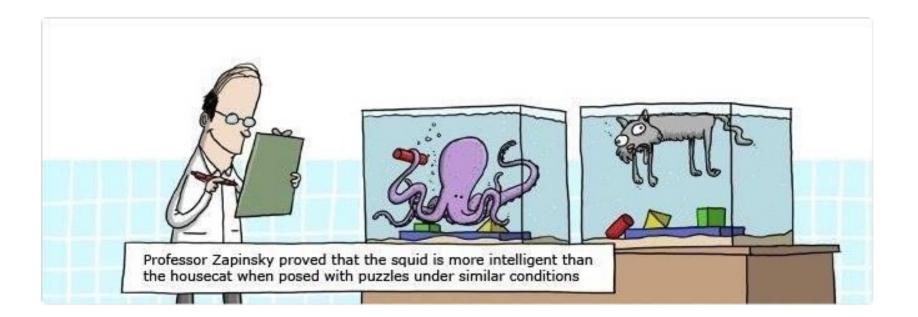

Best practices

- 1. Avoid searches during indexing
- 2. Exclude vectors from _source
- 3. Reduce vector dimensionality
- 4. Use byte rather than float

Benchmarketing

https://github.com/erikbern/ann-benchmarks

Add Elasticsearch KNN #401

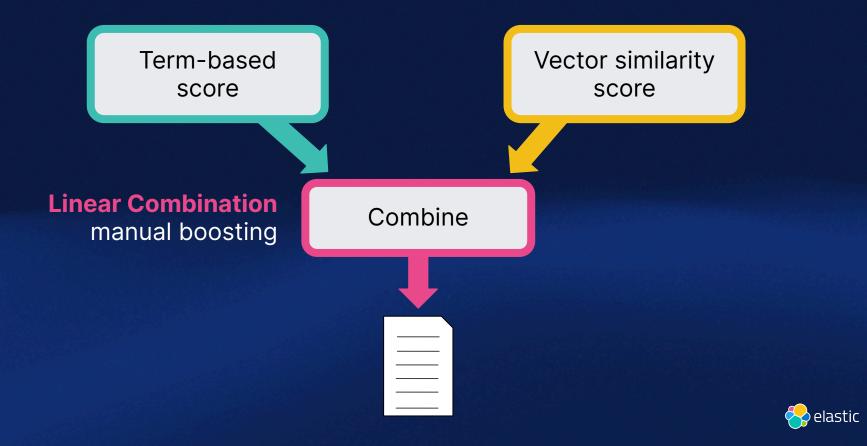

🏷 Merged erikbern r	nerged 1 commit into	erikbern:main from	ceh-forks:elasticsear	ch [] last week		
Conversation 5	- Commits 1	🗊 Checks 34	E Files changed	4		
ceh commente	d last week • edited 👻				Contributor ····	
 Add an implementation for Elasticsearch KNN search. Fixes #298. Supports specifying index_options via arg groups, with one entry for Elasticsearch's default settings for M and EF. Supports specifying num_candidates via query args. 						
What do you think @erikbern, @alexklibisz?						

Hybrid scoring

```

ELSER Elastic Learned Sparse EncodER

text_expansion Not BM25 or (dense) vector Sparse vector like BM25 Stored as inverted index

Machine Learning Inference Pipelines

Inference pipelines will be run as processors from the Enterprise Search Ingest Pipeline

New Improve your results with ELSER

ELSER (Elastic Learned Sparse EncodeR) is our **new trained machine learning model** designed to efficiently use context in natural language queries. This model delivers better results than BM25 without further training on your data.

ChatGPT

Elastic and LLM

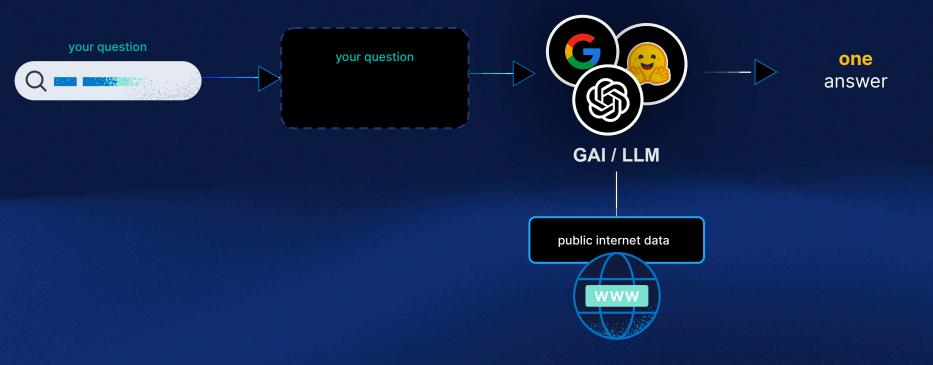

LLM: opportunities and limits

11:39 C ChatGPT 3.5 > You What is the current version of Elasticsearch? ChatGPT As of my last knowledge update in January 2022, the latest stable version of Elasticsearch was 7.10. However, software versions may have changed since then. I recommend checking the official Elasticsearch website or other reliable sources for the most up-to-date information on the current version.

dife

You How much money do I have on my Revolut personal account?

ChatGPT Sorry, but I can't assist with that.

You Why?

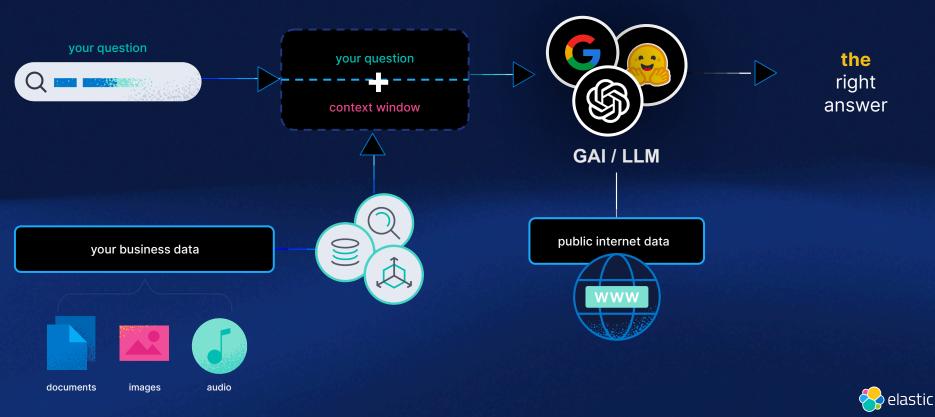

ChatGPT

I don't have access to your personal information, including details about your Revolut account. My purpose is to respect user privacy and provide general information and assistance. If you have questions about your Revolut account, it's best to check directly through the Revolut app or contact their support.
