

Having fun with login forms

HIDDE DE VRIES

30.03.2018

MozTW Labs, Taipei

The image shows a screenshot of a login form for the website moderator.mozilla.org. The form is titled "moz://a" and includes the URL "moderator.mozilla.org". Below the URL, it says "Log In with email or third-party". There is a text input field labeled "Email address" with a small icon on the right. Below the input field is a black button labeled "ENTER". Below the "ENTER" button, there are two buttons for third-party login: "Log in with GitHub" (with the GitHub logo) and "Log in with Google" (with the Google logo).

The IAM Project

identity

The IAM Project

access

identity

— proving/verifying who you are

access

- allowing you to see things when you have been identified

The IAM Project facilitates group curation: if you're in a group, you can see the things that group has access to.

Our users

- Mozilla IAM is used by staff as well as by some contributors
- people sometimes have various identities with differences in access rights
- some people want to use specific identities on specific sites

The “Lock” / NLX

The image shows a screenshot of the Mozilla login page. At the top is the 'moz://a' logo. Below it is the URL 'moderator.mozilla.org'. The text 'Log in with email or third-party' is followed by an input field labeled 'Email address' with a search icon on the right. Below the input field is a black button with the text 'ENTER'. Further down are two buttons: 'Log in with GitHub' with the GitHub logo and 'Log in with Google' with the Google logo. At the bottom of the page are links for 'Legal', 'Privacy', and 'Need help?'.

Experience
considerations

“Smart Lock”

or NLX

Keep business logic
away from users

No jargon

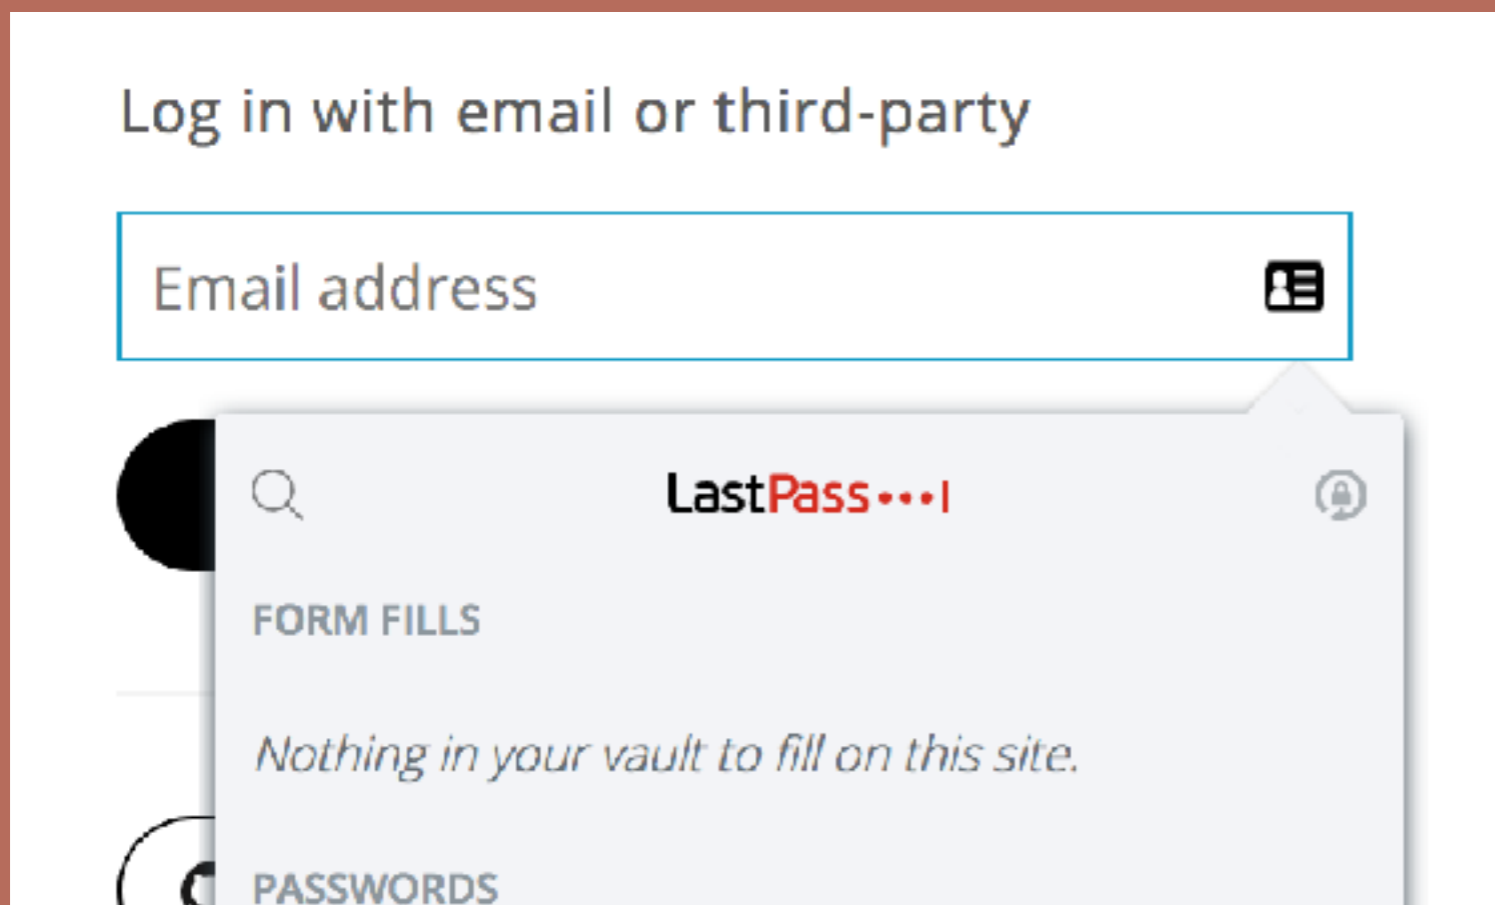

User testing

Accessibility

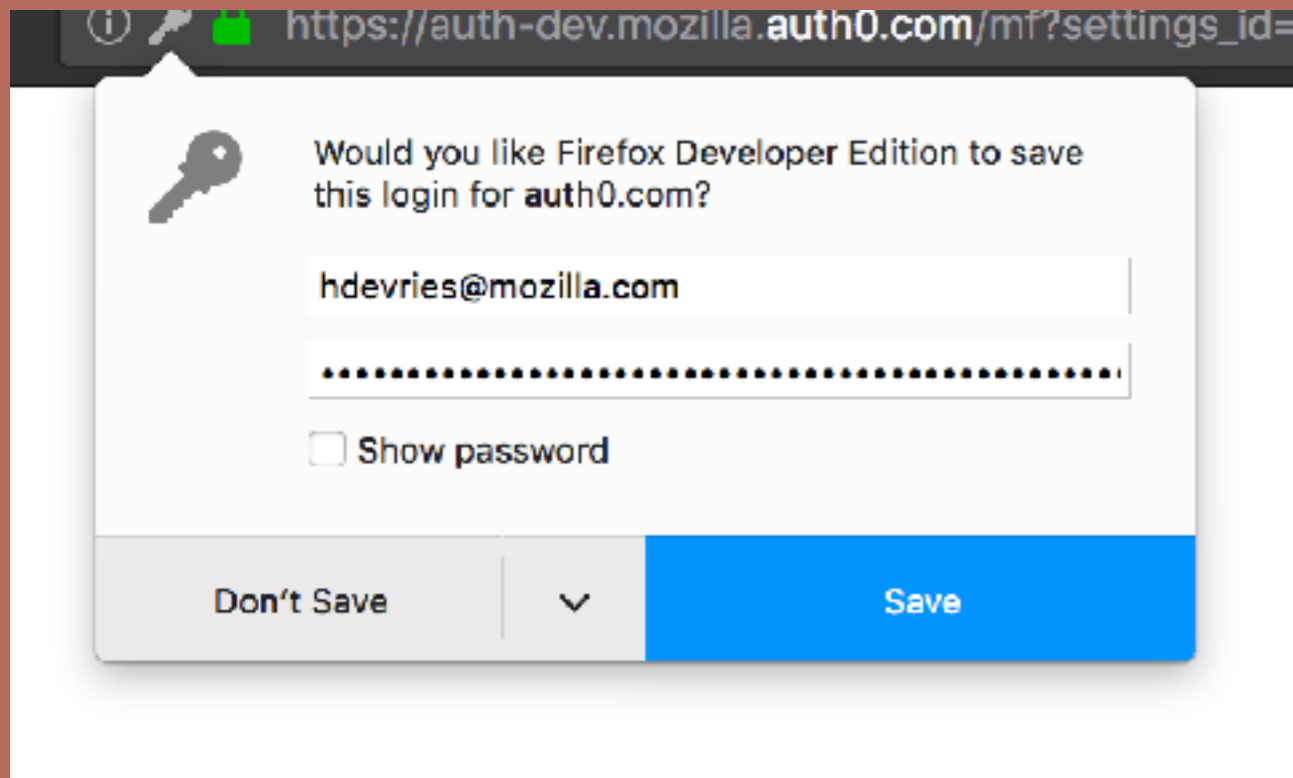

Password managers

The most secure passwords
are long and unique. And
therefore hard to remember

*making it work (1):
recognise the login screen*

*making it work (2): trigger
the 'Would you like to save
this password' prompt*

*making it work (3): have
the password manager fill
in the fields*

Lessons learned

Use web
standards

Avoid clever
tricks

Multipage is
hard

It's open source!
