# ★ puppeteer public

## API | FAQ | Contributing

Puppeteer is a Node library which provides a high-level API to control **headless** Chrome over the **DevTools Protocol**. It can also be configured to use full (non-headless) Chrome.

### What can I do?

Most things that you can do manually in the browser can be done using Puppeteer! Here are a few examples to get you started:

- Generate screenshots and PDFs of pages.
- Crawl a SPA and generate pre-rendered content (i.e. "SSR").
- Scrape content from websites.
- Automate form submission, UI testing, keyboard input, etc.
- Create an up-to-date, automated testing environment. Run your tests directly in the latest version of Chrome using the latest JavaScript and browser features.
- Capture a **timeline trace** of your site to help diagnose performance issues.

## Getting Started

### We ♥ your boss

Selectively mirror the npm registry inside your firewall. Filter packages based on security, licensing, code quality and more. Build awesome stuff faster.

[Try npm Enterprise for free...](#)

📄 `npm install puppeteer`

12.
13.  const usernames = await page.evaluate(function() {
14.    return Array.from(document.querySelectorAll('.fa-github'))
15.      .map(x => x.parentNode.href)
16.      .map(x => x.replace('https://github.com/', ''));
```

**execute JS on the client**

```
19.  const topUser = await githubService.getTopUser(usernames);
```

```
3.
4. init();
5.
6. async function init() {
7.   const browser = await puppeteer.launch();
8.
9.   const page = await browser.newPage();
10.  const url = 'https://summit2017.reversim.com/speakers';
11.  await page.goto(url);
12.
13.  const usernames = await page.evaluate(function() {
14.    return Array.from(document.querySelectorAll('.fa-github'))
15.      .map(x => x.parentNode.href)
16.      .map(x => x.replace('https://github.com/', ''));
17.  });
18.
```

fetch github usernames with DOM manipulation

```
21.  const { username, followerscount } = topuser;
```

```
7.   const browser = await puppeteer.launch();
8.
9.   const page = await browser.newPage();
10.  const url = 'https://summit2017.reversim.com/speakers';
11.  await page.goto(url);
12.
13.  const usernames = await page.evaluate(function() {
14.      return Array.from(document.querySelectorAll('.fa-github'))
15.          .map(x => x.parentNode.href)
16.          .map(x => x.replace('https://github.com/', ''));
17.  });
18.
19.  const topUser = await githubService.getTopUser(usernames);
20.
21.  const { username, followersCount } = topUser;
22.  console.log(`${username} has ${followersCount} followers!`);
```

get follower counts via the github API

```
25. }
```

```
10. const url = 'https://summit2017.reversim.com/speakers';
11. await page.goto(url);
12.
13. const usernames = await page.evaluate(function() {
14.     return Array.from(document.querySelectorAll('.fa-github'))
15.         .map(x => x.parentNode.href)
16.         .map(x => x.replace('https://github.com/', ''));
17. });
18.
19. const topUser = await githubService.getTopUser(usernames);
20.
21. const { username, followersCount } = topUser;
22. console.log(`${username} has ${followersCount} followers!`);
23.
24. await browser.close();
25. }
```

print the result

shlomi-noach has 208 followers!

```
11.   await page.goto(url);
12.
13.   const usernames = await page.evaluate(function() {
14.       return Array.from(document.querySelectorAll('.fa-github'))
15.           .map(x => x.parentNode.href)
16.           .map(x => x.replace('https://github.com/', ''));
17.   });
18.
19.   const topUser = await githubService.getTopUser(usernames);
20.
21.   const { username, followersCount } = topUser;
22.   console.log(`${username} has ${followersCount} followers!`);
23.
24.   await browser.close();
25. }
```

close the browser

```
1 const browser = await puppeteer.launch();
2 const page = await browser.newPage();
3 const url = 'https://summit2017.reversim.com';
4 await page.goto(url);
5 await page.screenshot();
6 await browser.close();
```

▶ RUN IT

**Note:** There's no need to `require('puppeteer')` in the editor. It's done for you!

## General Info

### About Reversim Summit

Reversim summit is our intention to create a conference for developers by developers. Like in the podcast, we bring you the content we are interested in, and we hope you will be too

This is the fifth(!) Reversim Summit. The summits of 2013 and 2014 (TLV Campus), 2015 (Technion) and 2016 (Weizmann Institute of Science) also featured community content. Watch previous years' sessions to get the general feel of the Revesim Summit spirit

The **Chrome DevTools Protocol** allows for tools to instrument, inspect, debug and profile Chromium, Chrome and other Blink-based browsers. Many existing projects [currently use](#) the protocol. The [Chrome DevTools](#) uses this protocol and the team maintains its API.

Instrumentation is divided into a number of domains (DOM, Debugger, Network etc.). Each domain defines a number of commands it supports and events it generates. Both commands and events are serialized JSON objects of a fixed structure. You can either [debug over the wire](#) using the raw messages as they are described in the corresponding domain documentation, or use [extension JavaScript API](#).

## Protocol API Docs

### [The latest \(tip-of-tree\) protocol \(tot\)](#)

It [changes](#) frequently and can break at any time. However it captures the full capabilities of the Protocol, whereas the stable release is a subset. There is no backwards compatibility support guaranteed for the capabilities it introduces.

### [v8-inspector protocol \(v8\)](#)

It is available in [node 6.3+](#) and enables [debugging & profiling](#) of Node.js apps.

### [stable 1.2 protocol \(1-2\)](#)

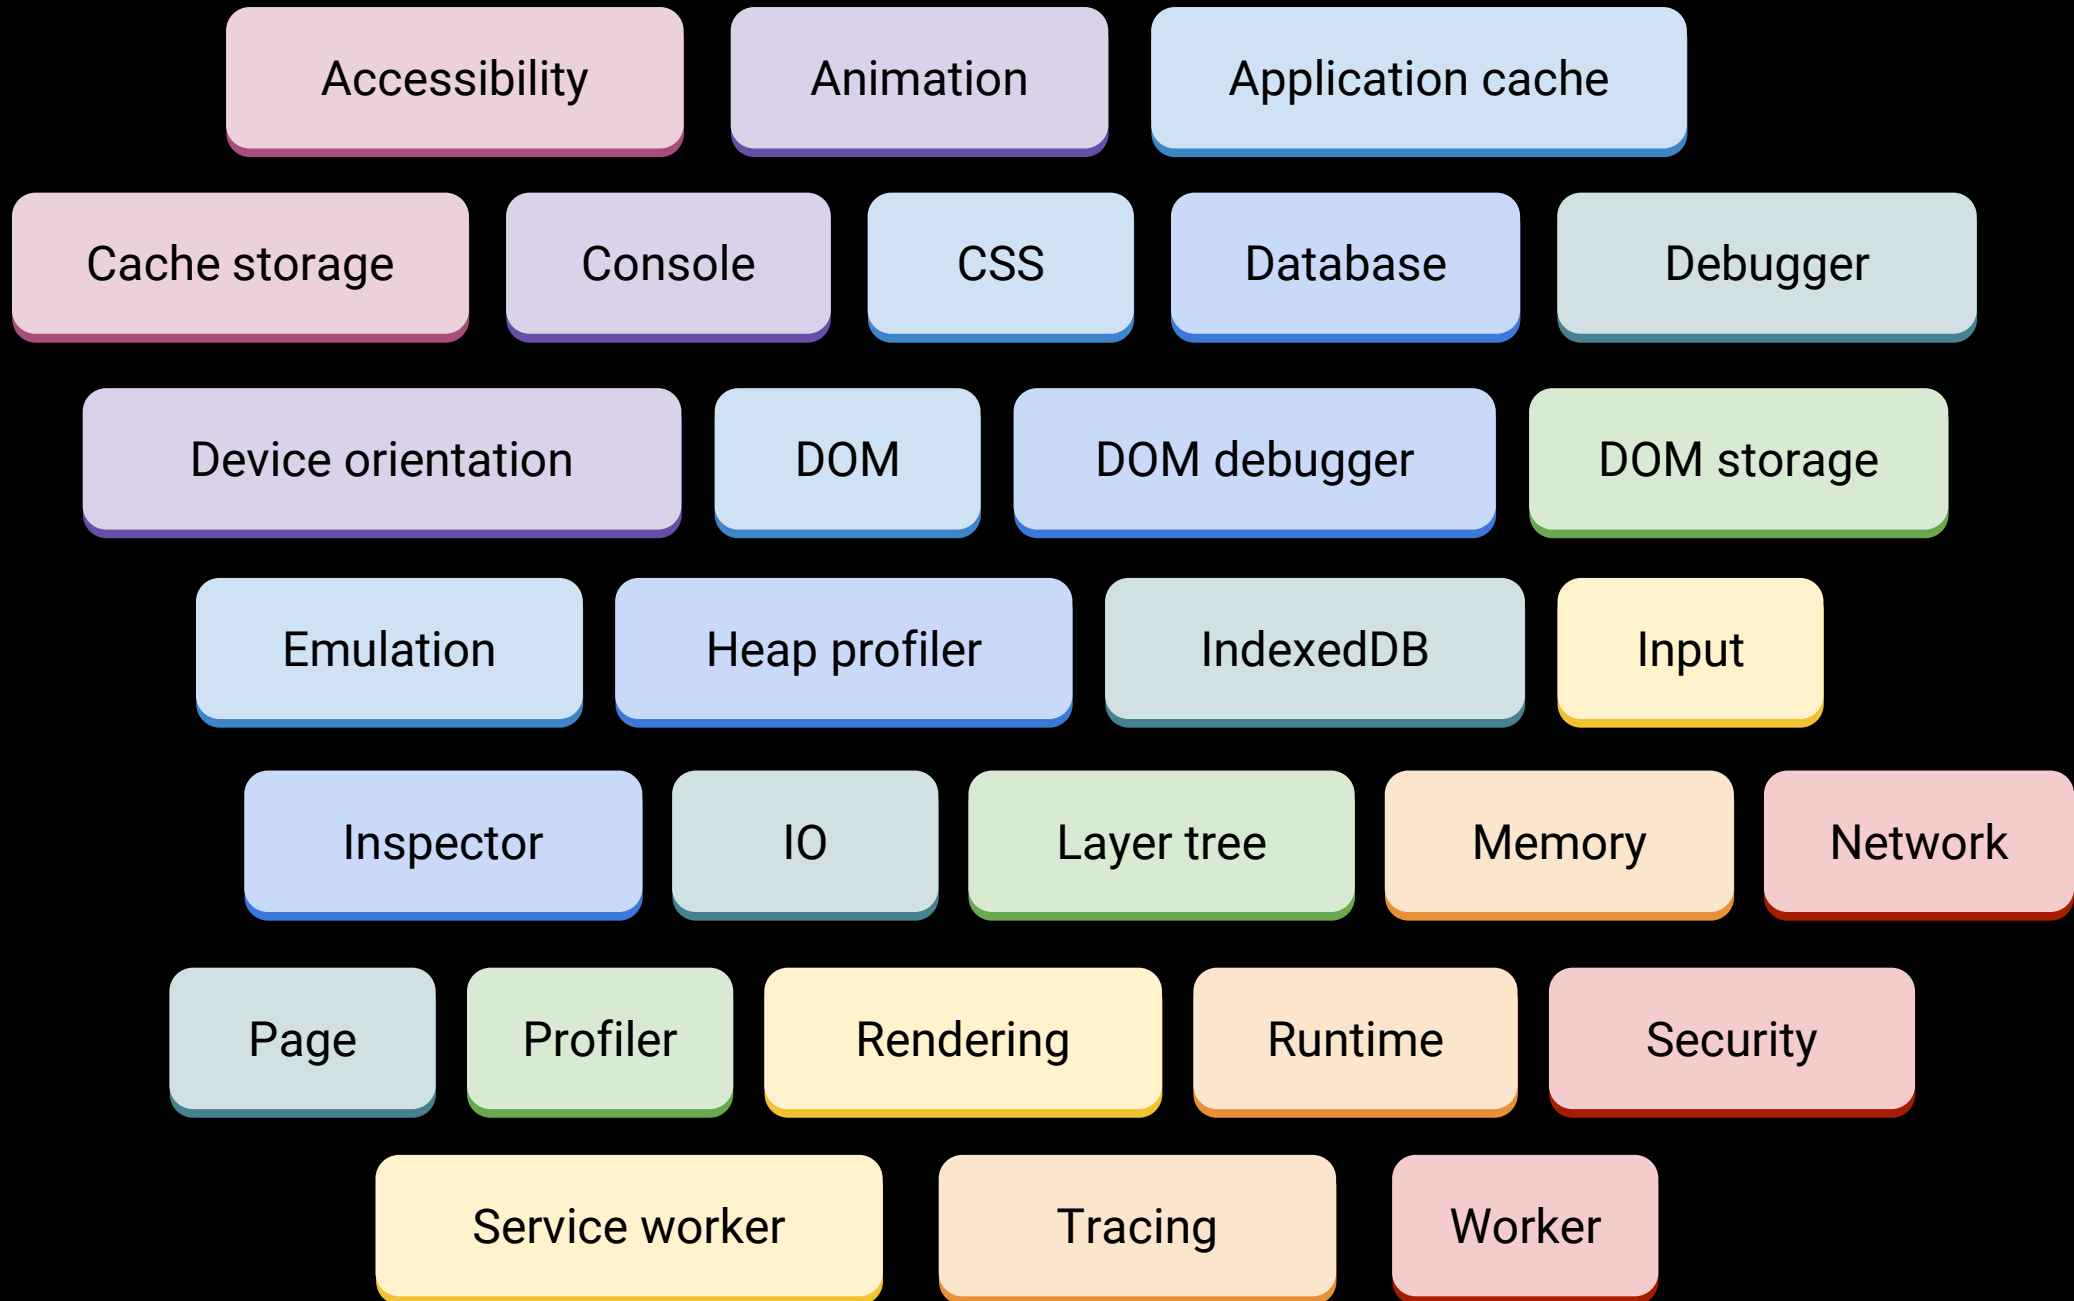

The stable release of the protocol, tagged at Chrome 54. It includes a smaller subset of the complete protocol compatibilities.

## Resources

Consider subscribing to the [chrome-debugging-protocol](#) mailing list.

The [devtools-protocol repo](#) issue tracker can also be used for concerns with the protocol. It also hosts the canonical copy of the json files.

A Venn diagram illustrating the relationship between three web automation tools. It consists of three overlapping circles. The largest circle, at the top, is labeled 'DevTools Protocol'. A medium-sized circle, labeled 'Selenium', overlaps with the bottom of the 'DevTools Protocol' circle. A smaller circle, labeled 'Puppeteer', overlaps with the bottom of the 'Selenium' circle. The 'Puppeteer' circle is entirely contained within the 'Selenium' circle, and the 'Selenium' circle is entirely contained within the 'DevTools Protocol' circle.

## Best Practices

62

We've compiled some recommendations for modernizing your web app and avoiding performance pitfalls. These audits do not affect your score but are worth a look.

### 5 failed audits

- ▶ Does not use HTTPS: 1 insecure request found ✗
- ▶ Does not use HTTP/2 for all of its resources: 20 requests were not handled over HTTP/2 ✗
- ▶ Does not use passive listeners to improve scrolling performance ✗
- ▶ Does not open external anchors using rel="noopener" ✗
- ▶ Manifest's short\_name will be truncated when displayed on homescreen  
No short\_name found in manifest. ✗

14.
15. async function fetchUnusedCssPercentage(browser) {
16.   const page = await browser.newPage();
17.
18.   const cp = page._client;
19.   await cp.send('Page.enable');
20.   await cp.send('DOM.enable');
21.   await cp.send('CSS.enable');
22.
23.   await cp.send('CSS.startRuleUsageTracking');
24.
25.   const stylesheets = [];
```

start tracking CSS usage

```
15. async function fetchUnusedCssPercentage(browser) {
16.     const page = await browser.newPage();
17.
18.     const cp = page._client;
19.     await cp.send('Page.enable');
20.     await cp.send('DOM.enable');
21.     await cp.send('CSS.enable');
22.
23.     await cp.send('CSS.startRuleUsageTracking');
24.
25.     const stylesheets = [];
26.     cp.on('CSS.styleSheetAdded', stylesheet => {
27.         stylesheets.push(stylesheet.header);
28.     });
```

listen for when a stylesheet is loaded

```
31.     await page.goto(url);
```

```
21.   await cp.send('CSS.enable');
22.
23.   await cp.send('CSS.startRuleUsageTracking');
24.
25.   const stylesheets = [];
26.   cp.on('CSS.styleSheetAdded', stylesheet => {
27.     stylesheets.push(stylesheet.header);
28.   });
29.
30.   const url = 'https://example-site-izvafmtnha.now.sh/';
31.   await page.goto(url);
32.   await page.click('.tab.type2');
33.   await page.click('.tab.type3');
34.   await page.click('.tab.type4');
```

interact with the page (load the page and click tabs)

```
37.
```

```
24.  
25.  const stylesheets = [];  
26.  cp.on('CSS.styleSheetAdded', stylesheet => {  
27.    stylesheets.push(stylesheet.header);  
28.  });  
29.  
30.  const url = 'https://example-site-izvafmtnha.now.sh/';  
31.  await page.goto(url);  
32.  await page.click('.tab.type2');  
33.  await page.click('.tab.type3');  
34.  await page.click('.tab.type4');  
35.  
36.  const {ruleUsage} = await cp.send('CSS.stopRuleUsageTracking');  
37.  
38.  return calcUsedCssPercentage(stylesheets, ruleUsage);
```

stop tracking CSS usage and fetch used rules

```
41.  function calcUsedCssPercentage(stylesheets, ruleUsage) {
```

```
26. cp.on('CSS.stylesheetAdded', stylesheet => {
27.     stylesheets.push(stylesheet.header);
28. });
29.
30. const url = 'https://example-site-izvafmtinha.now.sh/';
31. await page.goto(url);
32. await page.click('.tab.type2');
33. await page.click('.tab.type3');
34. await page.click('.tab.type4');
35.
36. const {ruleUsage} = await cp.send('CSS.stopRuleUsageTracking');
37.
38. return calcUnusedCssPercentage(stylesheets, ruleUsage);
39. }
40.
```

crunch the numbers

```
43. stylesheets.forEach(function(stylesheet) {
```

```
1. const puppeteer = require('puppeteer');
2.
3. init();
4.
5. async function init() {
6.   const browser = await puppeteer.launch();
7.
8.   const unusedCSS = await fetchUnusedCssPercentage(browser);
9.
10.  console.log(`${unusedCSS}% of your CSS is unused`);
11.
12.  await browser.close();
13. }
```

print the result and close the browser

```
16.   const page = await browser.newPage();
```

# Make it generic

```
1. const puppeteer = require('puppeteer');
2.
3. init();
4.
5. async function init() {
6.   const browser = await puppeteer.launch();
7.
8.   const unusedCSS = await fetchUnusedCssPercentage(
9.     browser,
10.    async function(page) {
11.      const url = 'https://example-site-izvafmtnha.now.sh/';
12.      await page.goto(url);
13.      await page.click('.tab.type2');
14.      await page.click('.tab.type3');
15.      await page.click('.tab.type4');
16.    }
```

pass case-specific interaction instructions as callback

```
19.   console.log(`${unusedCSS}% of your CSS is unused`);
```
