

Testing & Releasing Elasticsearch & the Elastic Stack

Alexander Reelsen
@spinscale
alex@elastic.co

Branch: master

Commits on Oct 26, 2019

Wrap ResponseException in AssertionError in ILM/CCR tests (#48489) ... Verified 94fe480

gwbrown committed 2 days ago

Commits on Oct 25, 2019

Refresh should not acquire readLock (#48414) ... Verified 379e847

dnhatn committed 2 days ago

Add slices to delete and update by query in HLRC (#48420) ... Verified 27c1902

hub-cap committed 2 days ago

[DOCS] Remove extraneous comma in Enrich Stats API's JSON response (#...) ... 93ecb9b

ycombinator authored and jrodewig committed 2 days ago

Mute RestClientMultipleHostsIntegTests.testCancelAsyncRequests (#48535) ... Verified 1744f1f

tlrx committed 2 days ago

Upgrade to Netty 4.1.43 (#48484) ... Verified d084b93

tbrooks8 committed 2 days ago

Download Elasticsearch

Want it hosted? Deploy on Elastic Cloud. [Get Started »](#)

Version: 7.4.1

Release date: October 23, 2019

License: **Elastic License**

Downloads: [📄 WINDOWS sha asc](#) [📄 MACOS sha asc](#)
[📄 LINUX sha asc](#) [📄 DEB sha asc](#)
[📄 RPM sha asc](#) [📄 MSI \(BETA\) sha asc](#)

Package Managers: Install with **yum, dnf, or zypper**

Install with **apt-get**

Install with **homebrew**

Containers: Run with **Docker**

Notes: Running on Kubernetes? Try **Elastic Cloud on Kubernetes** (alpha) or the Elasticsearch **Helm Chart (beta)**.

This default distribution is governed by the Elastic License, and includes the **full set of free features**.

View the detailed release notes [here](#).

Not the version you're looking for? View **past releases**.

The pure Apache 2.0 licensed distribution is available [here](#).

The distribution that's not bundled with a JDK is available [here](#).

You can obtain the source code for the bundled JDK [here](#).

Ready? Let's do this thing.

If you're brand new to Elastic, jump to our [quick-start guide](#).
We can [host Elasticsearch and Kibana for you](#), too.

Elasticsearch

Distributed, RESTful search and analytics.

[Launch on Elastic Cloud](#)[Download](#)

Kibana

Visualize your data. Navigate the Stack.

[Launch on Elastic Cloud](#)[Download](#)

Beats

Collect, parse, and ship in a lightweight fashion.

[Download](#)

Logstash

Ingest, transform, enrich, and output.

[Download](#)

APM

Find performance bottlenecks in your applications.

[Launch on Elastic Cloud](#)[Download](#)

App Search

Easily add powerful search to your apps using an intuitive interface.

[Launch on Elastic Cloud](#)[Download](#)

Enterprise Search

Elastic Cloud

Elastic Cloud Enterprise

applications.

using an intuitive interface.

[Download](#)

[Launch on Elastic Cloud](#)

[Launch on Elastic Cloud](#)

[Download](#)

[Download](#)

Enterprise Search

Securely search, discover, and organize all of your enterprise knowledge.

[Download](#)

Elastic Cloud

Spin up hosted Elasticsearch, Kibana, and Elastic Stack features.

[Launch](#)

Elastic Cloud Enterprise

Manage a fleet of clusters on any infrastructure.

[Install](#)

Elastic Cloud on Kubernetes

Set up and run Elasticsearch & Kibana on Kubernetes.

[Download](#)

ES-Hadoop

Quickly query and get insight into your big data.

[Download](#)

JDBC Client

A JDBC driver for Elasticsearch

[Download](#)

ODBC Client

An ODBC driver for Elasticsearch

[Download](#)

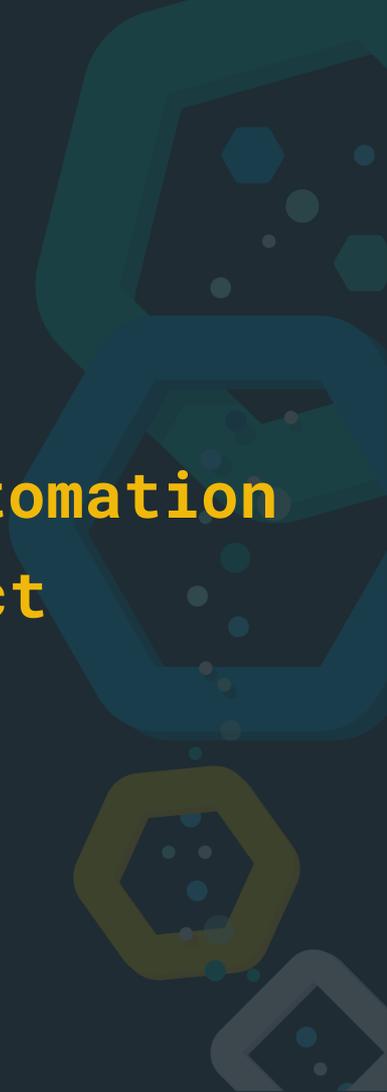

X-Pack

Only for versions 6.2 and older

[Install](#)

Today's goal

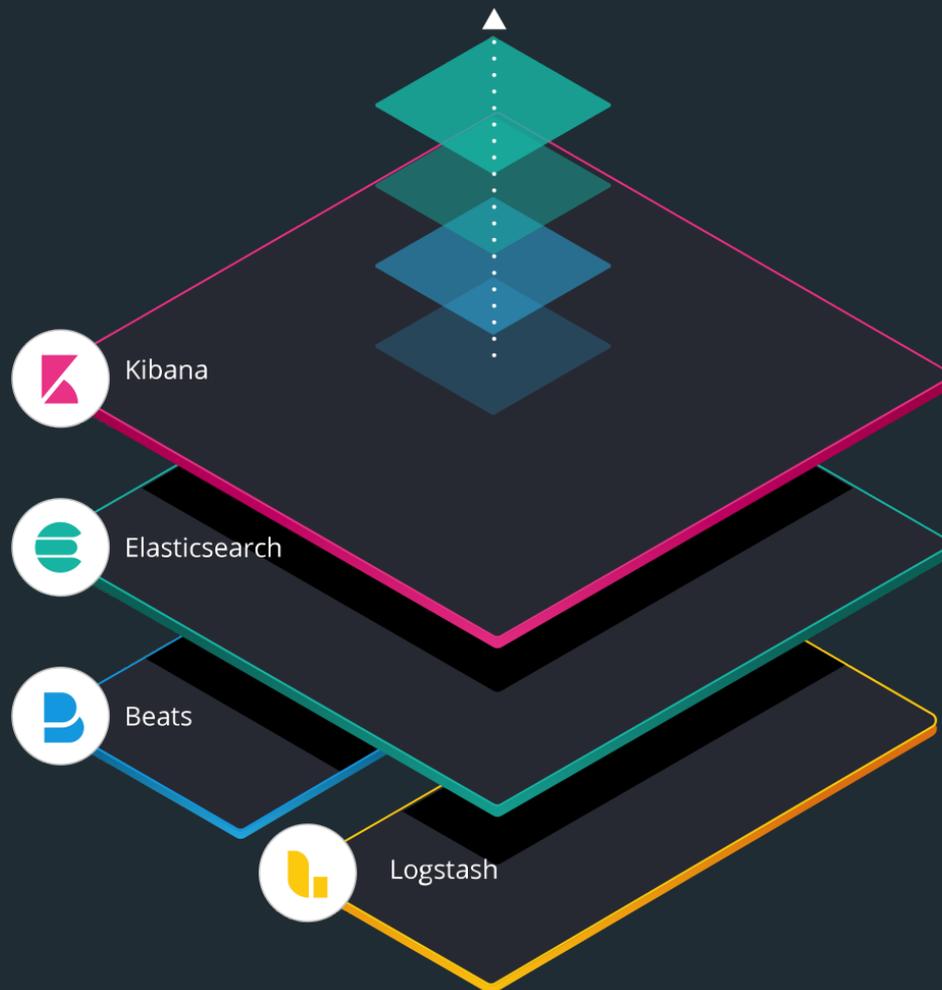

**Transfer Elasticsearch testing & automation
knowledge into your own project**

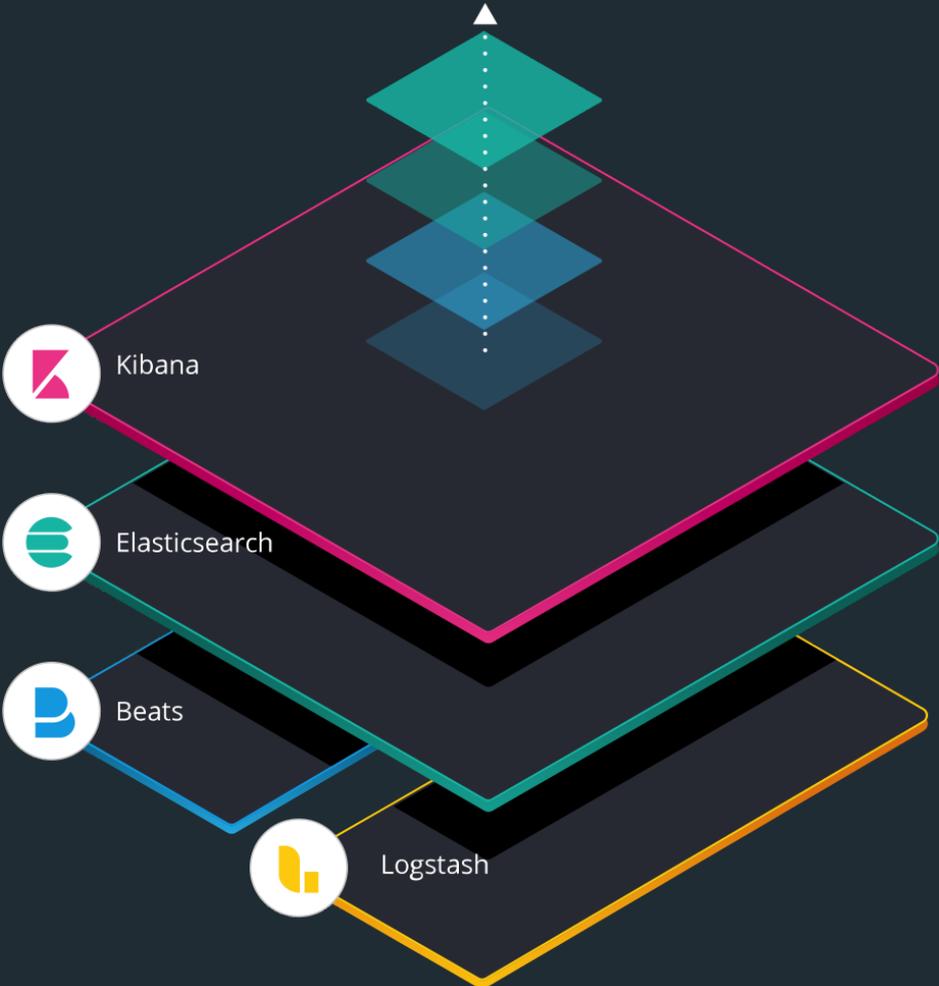

elastic

main topic

Elasticsearch in 10 seconds

- 🌿 Search Engine (FTS, Analytics, Geo), real-time
- 🌿 Distributed, scalable, highly available, resilient
- 🌿 Interface: HTTP & JSON
- 🌿 Heart of the Elastic Stack

Agenda

- 🍷 Unit Testing
- 🍷 Integration Testing
- 🍷 Package Testing
- 🍷 BWC Testing
- 🍷 Documentation Testing
- 🍷 CI: OS/JVM Testing
- 🍷 Releasing

Unit Testing

ESTestcase

ESTestCase

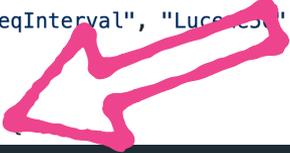

```
41 public class DateFormatterTests extends ESTestCase
42
43     public void testWeekBasedDates() {
44         // as per WeekFields.ISO first week starts on Monday and has minimum 4 days
45         DateFormatter dateFormatter = DateFormatter.forPattern("YYYY-ww");
46
```

ESTestCase

```
41 public class DateFormatterTests extends ESTestCase {
```

```
42
43 pu 153 /**
154      * Base testcase for randomized unit testing with Elasticsearch
155      */
156      @Listeners({
157          ReproduceInfoPrinter.class,
158          LoggingListener.class
159      })
160      @ThreadLeakScope(Scope.SUITE)
161      @ThreadLeakLingering(linger = 5000) // 5 sec lingering
162      @TimeoutSuite(millis = 20 * TimeUnits.MINUTE)
163      @LuceneTestCase.SuppressSysoutChecks(bugUrl = "we log a lot on purpose")
164      // we suppress pretty much all the lucene codecs for now, except asserting
165      // assertingcodec is the winner for a codec here: it finds bugs and gives clear exceptions.
166      @SuppressCodecs({
167          "SimpleText", "Memory", "CheapBastard", "Direct", "Compressing", "FST50", "FST0rd50",
168          "TestBloomFilteredLucenePostings", "MockRandom", "BlockTree0rds", "LuceneFixedGap",
169          "LuceneVarGapFixedInterval", "LuceneVarGapDocFreqInterval", "Lucene5"
170      })
171      @LuceneTestCase.SuppressReproduceLine
172      public abstract class ESTestCase extends LuceneTestCase
```

ESTestCase

```
41 public class DateFormatterTests extends ESTestCase {
```

```
198 @RunWith(RandomizedRunner.class)
199 @TestMethodProviders({
200     LuceneJUnit3MethodProvider.class,
201     JUnit4MethodProvider.class
202 })
203 @Listeners({
204     RunListenerPrintReproduceInfo.class,
205     FailureMarker.class
206 })
207 @SeedDecorators({MixWithSuiteName.class}) // See LUCENE-3995 for rationale.
208 @ThreadLeakScope(Scope.SUITE)
209 @ThreadLeakGroup(Group.MAIN)
210 @ThreadLeakAction({Action.WARN, Action.INTERRUPT})
211 @ThreadLeakLingering(linger = 20000) // Wait long for leaked threads to complete before failure. zk needs this.
212 @ThreadLeakZombies(Consequence.IGNORE_REMAINING_TESTS)
213 @TimeoutSuite(millis = 2 * TimeUnits.HOUR)
214 @ThreadLeakFilters(defaultFilters = true, filters = {
215     QuickPatchThreadsFilter.class
216 })
217 @TestRuleLimitSysouts.Limit(
218     bytes = TestRuleLimitSysouts.DEFAULT_LIMIT,
219     hardLimit = TestRuleLimitSysouts.DEFAULT_HARD_LIMIT)
220 public abstract class LuceneTestCase extends Assert {
```

ESTestCase

```
84  /**
85   * A {@link Runner} implementation for running randomized test cases with
86   * predictable and repeatable randomness.
87   *
88   * <p>Supports the following JUnit4 features:
89   * <ul>
90   *   <li>{@link BeforeClass}-annotated methods (before all tests of a class/superclass),</li>
91   *   <li>{@link Before}-annotated methods (before each test),</li>
92   *   <li>{@link Test}-annotated methods,</li>
93   *   <li>{@link After}-annotated methods (after each test),</li>
94   *   <li>{@link AfterClass}-annotated methods (after all tests of a class/superclass),</li>
95   *   <li>{@link Rule}-annotated fields implementing {@link org.junit.rules.MethodRule}
96   *     and {@link TestRule}.</li>
97   * </ul>
98   *
```

```
22072 public abstract class LuceneESTestCase extends AssertLuceneTestCase {
```

Random methods

```
public void testRandomStringLength() {  
    String randomString = randomAlphaOfLength(10);  
    assertThat(randomString.length(), is(10));  
  
    boolean randomBoolean = randomBoolean();  
    assertThat(randomBoolean, is(anyOf(is(true), is(false))));  
  
    final Integer randomInt = randomFrom(1, 22, 11, 41, 58);  
    assertThat(randomInt, is(allOf(greaterThanOrEqualTo(1), lessThanOrEqualTo(58))));  
  
    final int randomIntBetween = randomIntBetween(1, 10);  
    assertThat(randomIntBetween, is(allOf(greaterThanOrEqualTo(1), lessThanOrEqualTo(10))));  
  
    final long nonNegativeLong = randomNonNegativeLong();  
    assertThat(nonNegativeLong, is(greaterThanOrEqualTo(0L)));  
  
    final ZoneId zoneId = randomZone();  
    assertThat(ZoneId.getAvailableZoneIds(), hasItem(zoneId.toString()));  
  
    final Locale locale = randomLocale(random());  
    assertThat(Arrays.asList(Locale.getAvailableLocales()), hasItem(locale));  
}
```

Random methods

```
public void testRandomStringLength() {  
    String randomString = randomAlphaOfLength(10);  
    assertThat(randomString.length(), is(10));  
}
```

Random methods

```
public void testRandomStringLength() {  
    String randomString = randomAlphaOfLength(10);  
    assertThat(randomString.length(), is(10));  
}
```

```
public void testRandomStringLength() {  
    String randomString = randomAlphaOfLength(10);  
    assertThat(randomString.length(), is(Integer.MAX_VALUE));  
}
```

Randomization Example

```
private int add (int a, int b) {  
    assert a > 0;  
    assert b > 0;  
    return a + b;  
}
```

Randomization Example

```
private int add (int a, int b) {  
    assert a > 0;  
    assert b > 0;  
    return a + b;  
}
```

```
public void testAdd() {  
    assertThat(add(1, 1), is(2));  
    assertThat(add(2, 2), is(4));  
}
```

Randomization Example

```
private int add (int a, int b) {  
    assert a > 0;  
    assert b > 0;  
    return a + b;  
}
```

```
public void testAdd() {  
    final int a = randomIntBetween(0, Integer.MAX_VALUE);  
    final int b = randomIntBetween(0, Integer.MAX_VALUE);  
    assertThat(add(a, b), allOf(greaterThanOrEqualTo(a), greaterThanOrEqualTo(b)));  
}
```

Randomization Example

```
private int add (int a, int b) {  
    assert a > 0;  
    assert b > 0;  
    return a + b;  
}
```

```
@Repeat(iterations = 1000)  
public void testAdd() {  
    final int a = randomIntBetween(0, Integer.MAX_VALUE);  
    final int b = randomIntBetween(0, Integer.MAX_VALUE);  
    assertThat(add(a, b), allOf(greaterThanOrEqualTo(a), greaterThanOrEqualTo(b)));  
}
```

Randomization Example

```
private int add (int a, int b) {  
    assert a > 0;  
    assert b > 0;  
    return a + b;  
}
```

```
@Repeat(iterations = 1000)  
public void testAdd() {  
    final int a = randomIntBetween(0, Integer.MAX_VALUE);  
    final int b = randomIntBetween(0, Integer.MAX_VALUE);  
    assertThat(add(a, b), allOf(greaterThanOrEqualTo(a), greaterThanOrEqualTo(b)));  
}
```

java.lang.AssertionError:

```
Expected: (a value equal to or greater than <1667057423>  
and a value equal to or greater than <1800656534>)  
but: a value equal to or greater than <1667057423>  
<-827253339> was less than <1667057423>
```

Randomization Example

```
private int add (int a, int b) {  
    assert a > 0;  
    assert b > 0;  
    return a + b;  
}
```

```
@Repeat(iterations = 1000)  
public void testAdd() {  
    final int a = randomIntBetween(0, Integer.MAX_VALUE);  
    final int b = randomIntBetween(0, Integer.MAX_VALUE);  
    assertThat(add(a, b), allOf(greaterThanOrEqualTo(a), greaterThanOrEqualTo(b)));  
}
```

```
REPRODUCE WITH: ./gradlew ':server:test'  
--tests "de.spinscale.MyTest.testAdd"  
-Dtests.seed=EC29A319F9128F9A  
-Dtests.locale=pl-PL  
-Dtests.timezone=America/St_Kitts
```

Randomization Example

```
private int add (int a, int b) {  
    assert a > 0;  
    assert b > 0;  
    return a + b;  
}
```

```
@Seed("EC29A319F9128F9A")  
public void testAdd() {  
    final int a = randomIntBetween(0, Integer.MAX_VALUE);  
    final int b = randomIntBetween(0, Integer.MAX_VALUE);  
    assertThat(add(a, b), allOf(greaterThanOrEqualTo(a), greaterThanOrEqualTo(b)));  
}
```

ESTestCase goodies

- 🍷 Thread leak detection
- 🍷 Change log level for single test/package
- 🍷 Checks for excessive sysout/err writes
- 🍷 Test method order is randomized
- 🍷 Test class order is randomized
- 🍷 Deprecation logging checks
- 🍷 No inflight search contexts

Integration Testing

YAML ftw!

HTTP Integration tests

- 🌸 Run tests against Elasticsearch HTTP interface
- 🌸 Tests are written in YAML
- 🌸 API definition is written in JSON
- 🌸 `ESClientYamlSuiteTestCase` to extend
- 🌸 All official clients are using the same spec to guarantee feature parity

API definition

```
{
  "get":{
    "documentation":{
      "url":"https://www.elastic.co/guide/en/elasticsearch/reference/master/docs-get.html",
      "description":"Returns a document."
    },
    "stability":"stable",
    "url":{
      "paths":[
        {
          "path":"/{index}/_doc/{id}",
          "methods":[
            "GET"
          ],
          "parts":{
            "id":{
              "type":"string",
              "description":"The document ID"
            },
            "index":{
              "type":"string",
              "description":"The name of the index"
            }
          }
        }
      ]
    },
    "params":{
      "preference":{
        "type":"string",
        "description":"Specify the node or shard the operation should be performed on (default: random)"
      }
      ...
    }
  }
}
```

Test definition

```
---  
"Basic":  
  - do:  
    index:  
      index: test_1  
      id: 中文  
      body: { "foo": "Hello: 中文" }  
  
  - do:  
    get:  
      index: test_1  
      id: 中文  
  
  - match: { _index: test_1 }  
  - match: { _id: 中文 }  
  - match: { _source: { foo: "Hello: 中文" } }
```

More integration testing

- 🌸 Test against kerberos/samba/openldap/shibboleth-idp using docker and docker-compose
- 🌸 S3 integration testing using minio (via docker-compose)
- 🌸 Testing the docker image via docker-compose

Package Testing

Containers

Elasticsearch: A lot of flavours

- 🍷 tar.gz, zip, deb, rpm
- 🍷 apt / yum repositories
- 🍷 docker images
- 🍷 osx brew tap
- 🍷 Windows MSI
- 🍷 helm chart, ECK (K8s operator)
- 🍷 puppet, ansible, chef

Testing packages

🍷 Use vagrant to download/install distributions

🍷 ubuntu-1604, ubuntu-1804, debian-8,
debian-9, centos-6, centos-7, oel-6,
oel-7, fedora-28, fedora-29, opensuse-42,
sles-12, rhel-8, windows-2012r2,
windows-2016

Testing packages

- 🍄 bats is used for testing
- 🍄 bats: bash automated testing
- 🍄 package installation/start/stop/uninstall
- 🍄 Long term plan: Moving away from bats to java tests

<https://github.com/elastic/elasticsearch/tree/master/qa/os>

BWC Testing

You get an upgrade, everyone gets an upgrade!

BWC Testing

- 🌿 Upgrades must be supported and tested!
- 🌿 Full cluster restart
- 🌿 Rolling restarts between minor versions
- 🌿 Rolling restarts from the latest old major version to the current major version, i.e. **6.8.7** to **7.6.1**

Rolling upgrade tests

6.8.x

6.8.x

7.6.x

Documentation Testing

Y'all doing this, right?

Documentation Testing

- 🌿 All documentation is written in asciidoc
- 🌿 Fire up a test cluster
- 🌿 Extract snippets from documentation
- 🌿 Run snippets against cluster
- 🌿 Optionally: check response contents

Sample snippet

```
[source, console]
```

```
-----  
GET twitter/_doc/0  
-----
```

```
// TEST[setup:twitter]
```

Get API

Retrieves the specified JSON document from an index.

```
GET twitter/_doc/0
```

[Copy as cURL](#)

[View in Console](#)

Sample snippet

```
[source,console-result]
```

```
-----  
{  
  "_index" : "twitter",  
  "_id" : "0",  
  "_version" : 1,  
  "_seq_no" : 10,  
  "_primary_term" : 1,  
  "found" : true,  
  "_source" : {  
    "user" : "kimchy",  
    "date" : "2009-11-15T14:12:12",  
    "likes" : 0,  
    "message" : "trying out Elasticsearch"  
  }  
}
```

```
-----  
// TESTRESPONSE[s/"_seq_no" : \d+/"_seq_no" : $body._seq_no/ s/"_primary_term" :  
1/"_primary_term" : $body._primary_term/]
```

build.gradle FTW

One build system to rule them all

All you need is gradle

- 🌿 Elasticsearch uses gradle for everything
- 🌿 All tests can be triggered via gradle
- 🌿 Try to reduce dependency external tools

PR testing

Immediate feedback...

Github PR testing

- 🌸 Every commit to an open PR triggers a build
- 🌸 Trigger test run via github
- 🌸 Trigger merge and test run via github

Github PR testing

Nightly benchmarks

Elasticsearch

We run benchmarks oriented on spotting performance regressions in metrics such as indexing throughput or garbage collection times.

Geonames

Indexing 11 million location documents and running various full text queries (match, function_score, ...) and aggregations.

Geopoint

Indexing 60 million location documents and running various geo-based queries (polygon, bounding box, distance, ...).

Percolator

Indexing 2 million AOL queries and running percolator queries against them.

PMC

Full text oriented benchmark measuring indexing performance and running queries and aggregations on a corpus of scientific papers.

NYC taxis

2015 taxi rides in New York measuring the performance for a large highly-structured data set.

Nested

Questions and answers from Stackoverflow measuring the performance for a nested data set.

HTTP logs

Web server logs from the 1998 football world cup to evaluate the performance for server logs.

NOAA

Weather data from NOAA measuring the performance of range fields.

Release it!

Shipping products is

Embrace the difference

- 🌿 Every product in the stack will test differently
- 🌿 Java, JRuby, Ruby, Go, Javascript, TypeScript, Scala, .NET, perl, PHP, python, bash, Groovy, C++, Haskell, Clojure
- 🌿 JSON, YAML, terraform, hcl

Everyone be ready!

- 🍷 Releases are time based
- 🍷 Every product's branch should be ready
- 🍷 Build of release candidate artifacts
- 🍷 Testing of these artifacts
- 🍷 Repeat until done across products: Fix all blockers
- 🍷 Releasing of those artifacts

Release manager

- 🌸 A person responsible for the release
- 🌸 Triggers the build of all artifacts
- 🌸 Performs follow up tasks for each team after a release

Trust the process!

- 🌿 Staged artifacts are the final release artifacts, no rebuilds!
- 🌿 Push artifacts to their final destinations
- 🌿 Official links, OSS sonatype, rubygems, docker images, package repositories

Trust the process!

- 🌸 +200 artifacts are promoted to release bucket
- 🌸 Using Tekton Pipelines instead of single process started on release manager machine
- 🌸 promoting artifacts: 4x faster
- 🌸 3rd party promotion: 6x faster
- 🌸 > 40 pods are doing a single release

More Work begins after releasing

- 🌿 website
- 🌿 communication
- 🌿 release blog posts
- 🌿 ensuring everything has been published

Support it!

Don't forget to phase out...

Products have a lifecycle

- 🌱 Stop supporting old products
- 🌱 Be consistent with support guarantees
- 🌱 Provide maintenance policy
- 🌱 Distinguish between end of life & fixing bugs

Elastic product end of life dates

We love all our products, but sometimes we must say goodbye to a release so that we can continue moving forward on future development and innovation. Our End of Life policy defines how long a given release is considered supported, as well as how long a release is considered still in active development or maintenance. We provide more information about **support policy**, **platform support**, and **support SLAs** separately.

Summary

The upshot is that we support each major release of our products for 18 months from the General Availability date, and we actively maintain the last minor release of the two most recent major branches of Elasticsearch, and compatible releases of Kibana, Beats, and Logstash. The rest of this document describes this philosophy in more details and provides concrete examples. Tables at the bottom of this page detail maintenance schedule for each of our supported products.

Types of releases

Major versions, such as 1.0.0, 2.0.0, 5.0.0, 6.0.0, and 7.0.0, provide us with an opportunity to introduce features and break backwards compatibility. Minor versions, such as 7.1.0 and 7.2.0, provide us with an opportunity to introduce features. Maintenance releases, such as 7.1.1 and 7.1.2, fix bugs only. Maintenance activity occurs on all releases, but we focus on the minor release stream (e.g., 7.1.x) to define how long we maintain a particular code line. Active maintenance of a minor release implies that we are fixing bugs and backporting some number of fixes into that code branch.

Maintenance policy

Our goal is to maintain the most recent minor release from the current major release stream and the most recent minor release from the prior major release stream. We have observed that some users upgrade frequently and stay up to date with our release stream. These users can stay with the latest minor release stream and obtain fixes with the maintenance releases they choose to deploy. For example, these users would follow our Elasticsearch releases with 7.0.0, 7.0.1, 7.2.0, etc.

We know that not all users upgrade as quickly as we release. For these users, we maintain the last minor of the prior major release series. For example, with Elasticsearch 6.x, we are maintaining the 6.8.x series. This allows these users to obtain fixes while making only minor changes to their running software. This last minor will be maintained until the release of the second subsequent major version. For example, Elasticsearch 6.8.x will be maintained until the GA release of Elasticsearch 8.0.0. At the release of Elasticsearch 8.0.0, we will continue to maintain the last 7.x series, and begin maintaining the 8.0.x minor series, then 8.1.x series, then 8.2.x series of minor releases.

From time to time we may backport fixes to other minor release streams. For example, a very serious security bug might be ported to multiple branches. We will use our discretion in deciding to do this, but expect it to be very infrequent.

Maintenance tables

5.3.x	2018-08-28	5.4.0
5.4.x	2018-11-04	5.5.0
5.5.x	2019-01-06	5.6.0

7.3.x	2021-01-31	7.4.0
7.4.x	2021-04-01	7.5.0

Logstash forwarder

Logstash forwarder	EOL date	Maintained until
0.4.0	2016-11-07	Beats 1.0.0

Summary

Automate all the things!

Summary

- 🍷 Automate early, automate often
- 🍷 Automate your tests, all of them
- 🍷 Manual testing will still find bugs
- 🍷 Automate your releases
- 🍷 Ensure everyone can do a release
- 🍷 Non-technical aspects are much harder to automate

Thanks for listening!
