a complete list of side effects and there may be others.

## What Precautions Are Needed To Use Tadalista 20?

If you plan to take this drug, as would be the case with any other medication, you may be interested in learning about the side effects of this drug, which are:

This medication has in it **Generic Tadalafil**. Therefore, if you happen to be suffering from high blood pressure and are taking Tadalafil or other doses of this drug, such as Tadalafil 40 mg or any other form of PDE5 inhibitors such as **Sildenafil** or **Vardenafil**, be sure not to take this drug.

This drug gives no protection against STDs (sexually transmitted diseases) of the likes of HIV and AIDS. It requires the use of contraceptives during sexual stimulation, to protect oneself from STDs.

It is important that you first inform your doctor that you will be taking this drug, as in the unlikely event that you need immediate treatment for heart problems, it is important that you inform your doctor when you last took this drug.

If you suffer from dizziness, **high blood pressure**, fainting spells, if you have benign prostatic symptoms or heart problems, it is not advisable for you to take this drug.

## What Is The Best Time To Take Tadalista 20?

The best time to take this medication is about 30 minutes before you want to have sex. If you choose this medication immediately before having sex, you may find that it will not work.

You can take the medication without **food** 🍽️ or after meals. It is in tablet form and should be taken whole, NOT by crushing, splitting or breaking. It is likely that the drug effects may last as much as 36 hours. There are men all over the world who have taken this drug and found it very long lasting, as when they took it on Friday night, they could still feel the effects, until Sunday morning.
