## Mechanism Action of Malegra Tablets

Malegra 200 consists of **Sildenafil Citrate** in its specifications. Sildenafil citrate is an inhibitor of an enzyme identified as Phosphodiesterase type 5, which is in many parts of the body, including male reproductive organ areas like the penis and the prostate gland.

... When Sildenafil Citrate Essence is performed in the body, it will fight against this enzyme to prevent it from degrading cGMP and causing it to accumulate in the penis. Therefore, when a person is sexually stimulated, nitric oxide is produced, which reacts with cGMP to relax the muscles of the cavernous body.

It allows sufficient blood to flow to the penis and softens the muscles of the penis, thereby making erections more likely to occur. In addition, the drug also exerts its effect, recovering faster after ejaculation. This drug works best when a person has been sexually stimulated.

Considering a recent examination, 2 out of 3 men who suffered erectile problems have noticed that applying a PDE-5 inhibitor contributed to the erection improvement. Doctors command taking Sildenafil 30 minutes before the intended physical intercourse.
