- Writer of stories
- Game Master for fellow D&D lovers
- 13+ years in the Sitecore community!

# The Plan for Today

The benefits of **Sitecore XM Cloud** vs. Sitecore Experience Platform (XP).

Why **serverless infrastructure** is the right move.

Strategies for navigating the **move to headless** architecture.

# Fishtank at a Glance

**100+**

**Successful Digital Solutions** across  
businesses of every size and vertical

**12**

**Completed** Sitecore XM  
Cloud Launches

**12+**

**Years** of Sitecore experience  
and expertise

**5**

**Sitecore MVPs**  
in 2024

Roadmap

# If You Know, You Know

We continuously invest in thought leadership throughout Fishtank.

We are the reference for many across our industry.

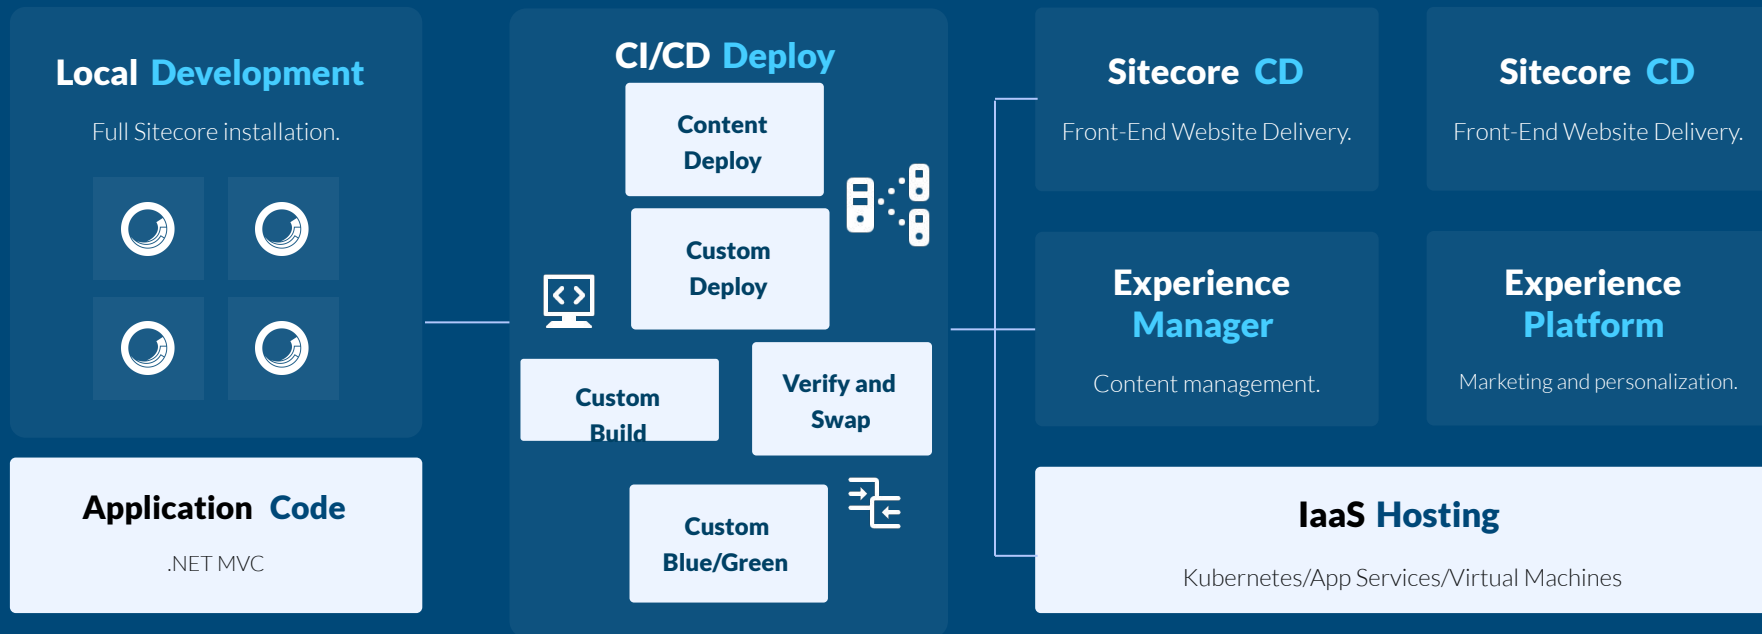

Over +200 articles a year shows our commitment to **learning and education.**

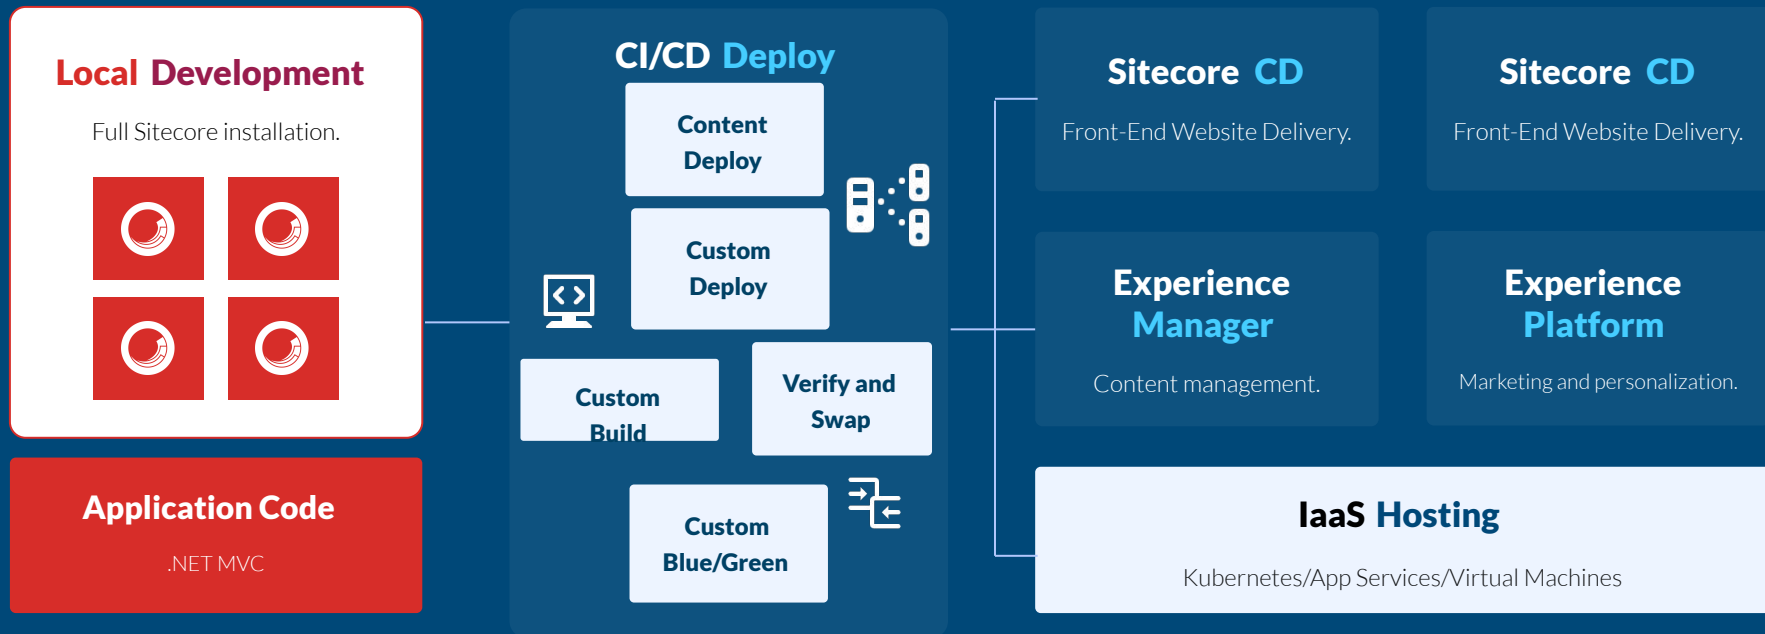

# Facing the Challenge

**Why are customers moving to headless  
and Sitecore XM Cloud?**

# Problems Today on Sitecore XP

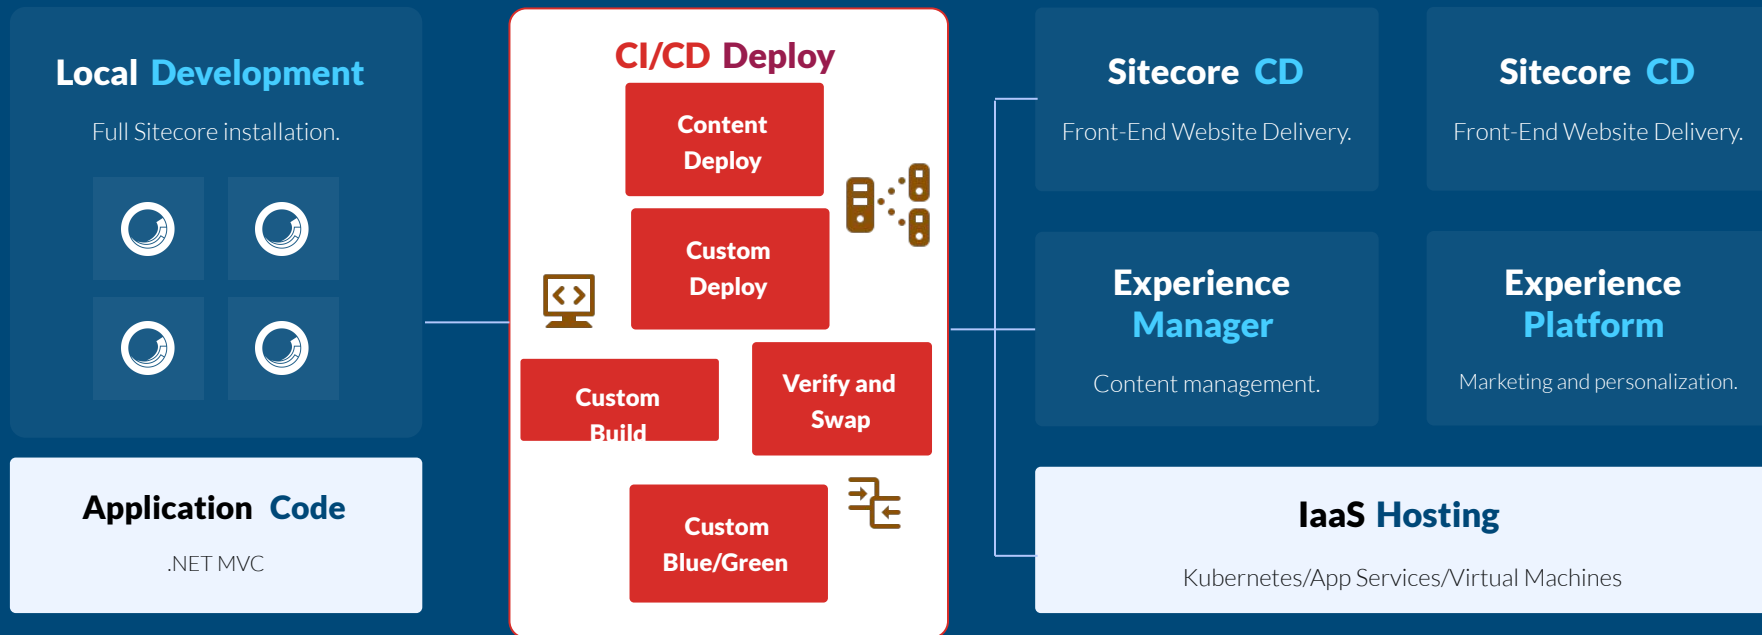

# Problems Today on Sitecore XP

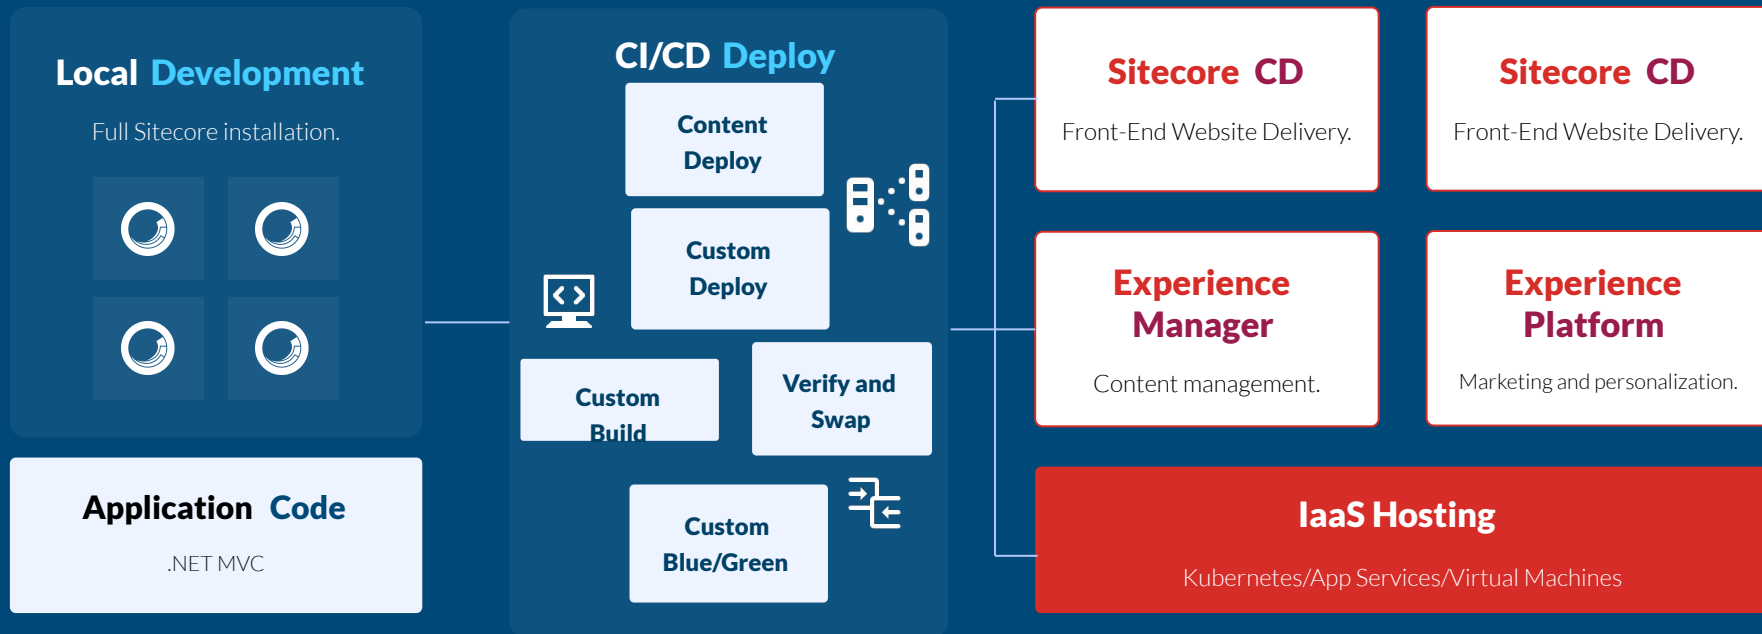

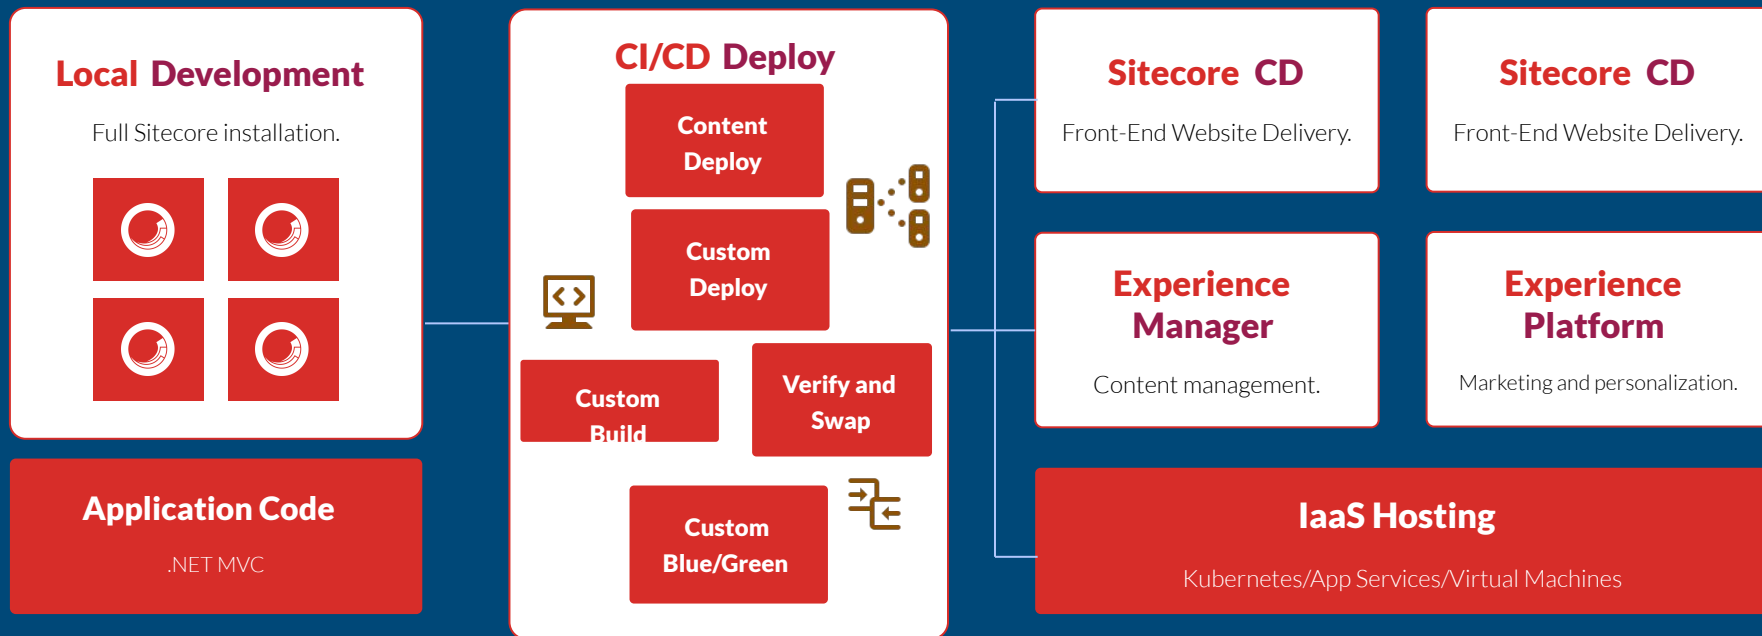

# Problems Today on Sitecore XP

# Problems Today on Sitecore XP

# Problems Today on Sitecore XP

A blue-tinted landscape of rugged mountains and a valley. The scene is dominated by sharp, rocky peaks and deep, shadowed valleys. The overall mood is serene yet powerful, with the blue color scheme creating a sense of depth and tranquility.

**We can do better.**

# Transitioning to Headless — Real Options

1

## Sitecore XP Today

- **Outdated** MVC technology
- Front-end devs are **frustrated with their workflow**
- Responsible for all **infrastructure / upgrades**

2

## Sitecore XP Headless

- Use **modern dev frameworks** and hosting
- More efficient **DevOps flow**
- Offload responsibility for front-end hosting, **but still own CMS and upgrades**

3

## Sitecore XM Cloud

- XP Headless plus **new authoring UX**
- **Global** content delivery index
- Offload responsibility for all **infrastructure / upgrades**

Side-by-Side Comparison	XP Today	XP Headless	XM Cloud
SaaS hosting of front-end application		✓	✓
SaaS hosting of Sitecore CMS backend			✓
Use modern dev frameworks		✓	✓
Improve editing UX for business users		✓	✓
Modern FeaaS editing tools for Pages and Components			✓
Re-use existing licensing	✓	✓	
Aligned with Sitecore roadmap		✓	✓
Global content delivery index (Experience Edge)		(requires additional licensing)	✓
Customize CMS backend	✓	✓	
Personalization	✓	✓	✓ (partial)
Full XP Digital Marketing capabilities	✓	✓	(requires additional licensing)

# The Technology Value

## **Simpler, Faster Development**

Simpler tech stack with less. No re-compiling, re-deploying, no more C# to MVC. Fast, efficient JavaScript-based.

## **Next Gen Web Framework**

Next.js is website framework built specifically to deliver optimized, scalable, sites with industry leading performance.

## **Serverless Delivery & DevOps**

Leverage SaaS technologies like Vercel and Netlify give us global reach, infinite scaling, built-in deployments

## **Decoupled Technology**

Develop without Sitecore. Deliver content to any device.

# The Business Value

## Future Proof

Built on the latest technology and aligns with Sitecore's roadmap.

## Reusability & Efficiency

Headless approach means more options for component sharing and re-usability.

## Less Time Authoring

Dramatically improved authoring experience means more free time and more possibilities for the business.

## Easier To Staff & Support

React / Next.js developers are easier to come by than Sitecore developers. Gives existing Sitecore developers new, modern development tools.

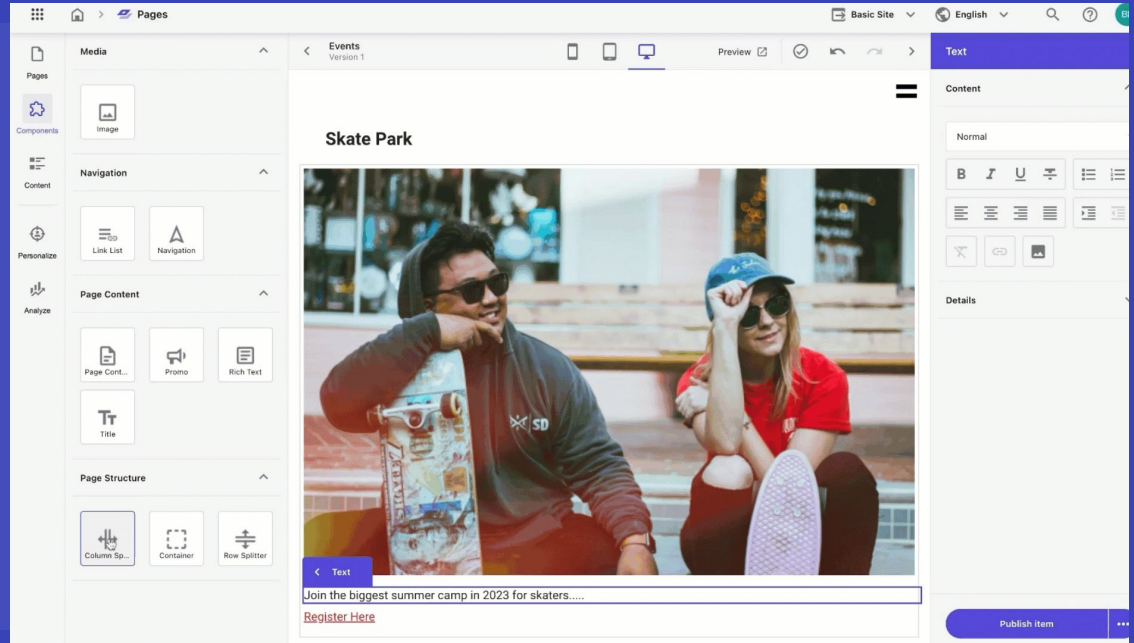

# XM Cloud

**A quick review of the good stuff**

# Why XM Cloud? The Benefits

## The benefits of the enterprise leader in DXP / CMS on SaaS.

- No more upgrade projects
- Next generation frameworks
- Easier to staff and support
- Always up-to-date
- Rapid innovation cycles
- No operational footprint
- Lower total cost of ownership
- New modern authoring UX

# Why XM Cloud? The Benefits

## A low-code / no-code way of creating new site features.

- Front-End as a Service (FEaaS)
- Bring your own design system
- Drag-and-drop builder
- Pull in data from other sources and re-use on other platforms

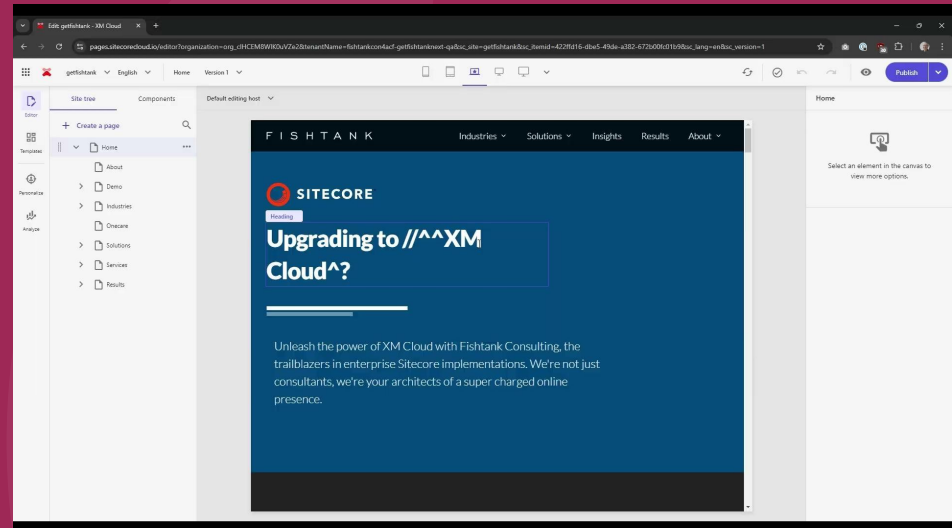

# The New Authoring UX

Stay in your flow.

- Create new pages
- Access everything in one place
- Build it out yourself with a library
- Design your own components

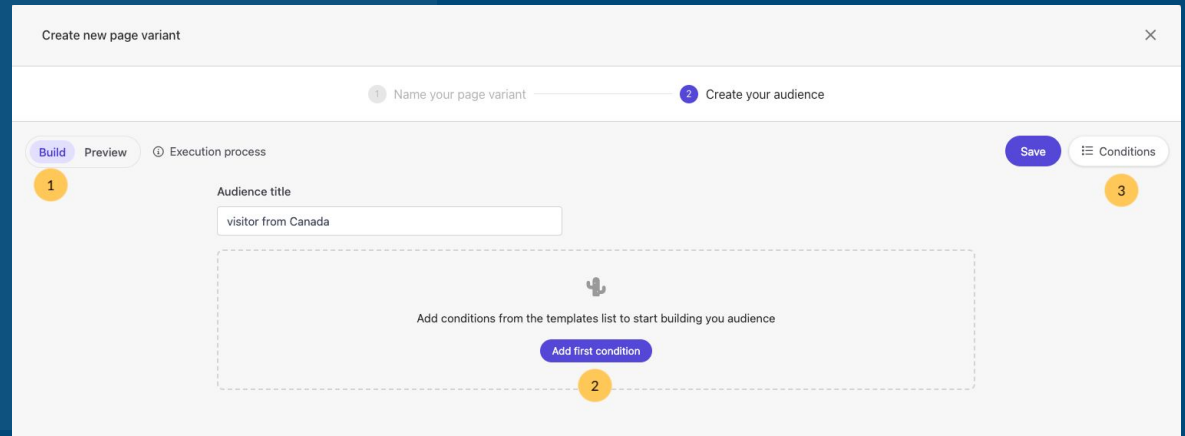

**Let's see it action!**

# XM Cloud Personalization

Sitecore XM Cloud allows you define and audiences and deliver **page-level personalizations** .

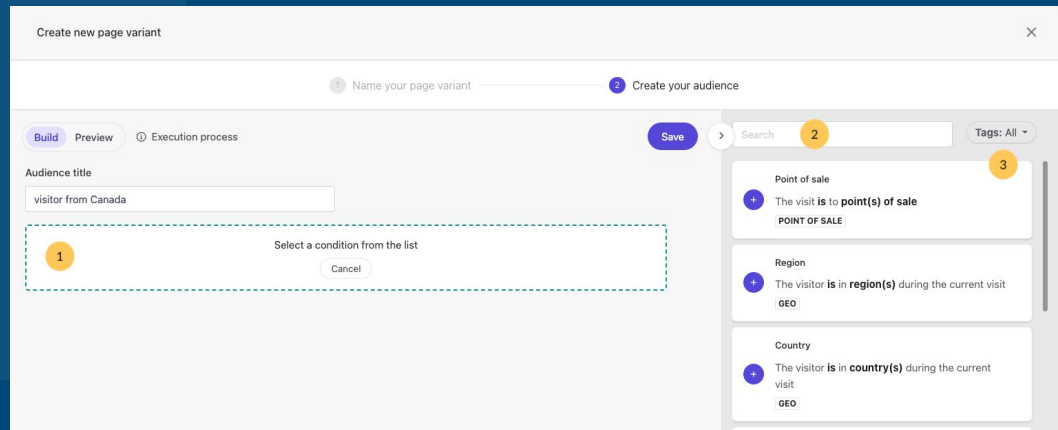

1. Create a page variant
2. Define your audience
3. Create your page
4. Personalize!

# XM Cloud Audience Builder

Explore a variety of **predefined condition templates** in the right pane to effectively build your audience. Condition templates:

- Date
- Device
- Geo
- Point of sale
- User interaction
- Visit

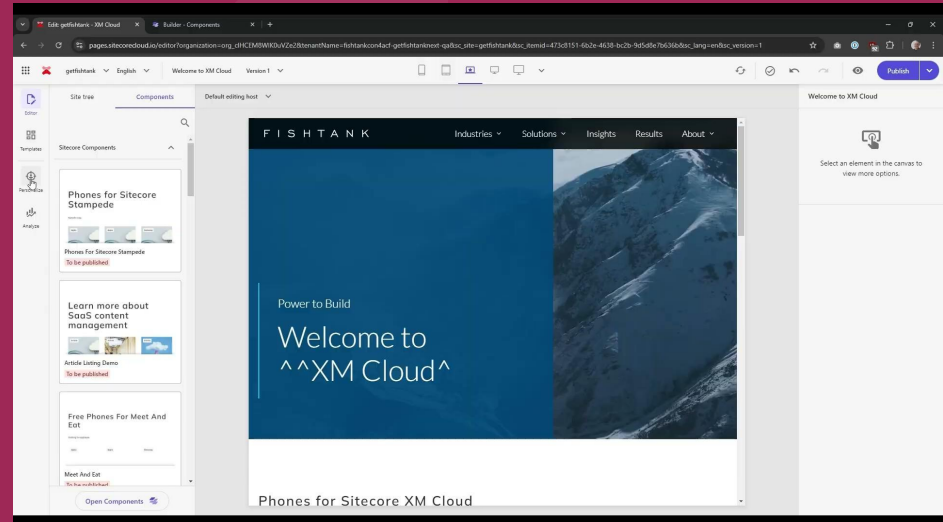

# XM Cloud Personalization

XM Cloud embedded personalization makes it easy to target your audiences, directly in Pages.

- Create variants of entire pages to target your audiences
- Use a library of conditions to create your custom audiences
- Change content for each audience as much or as little as you want

**Let's see it action!**

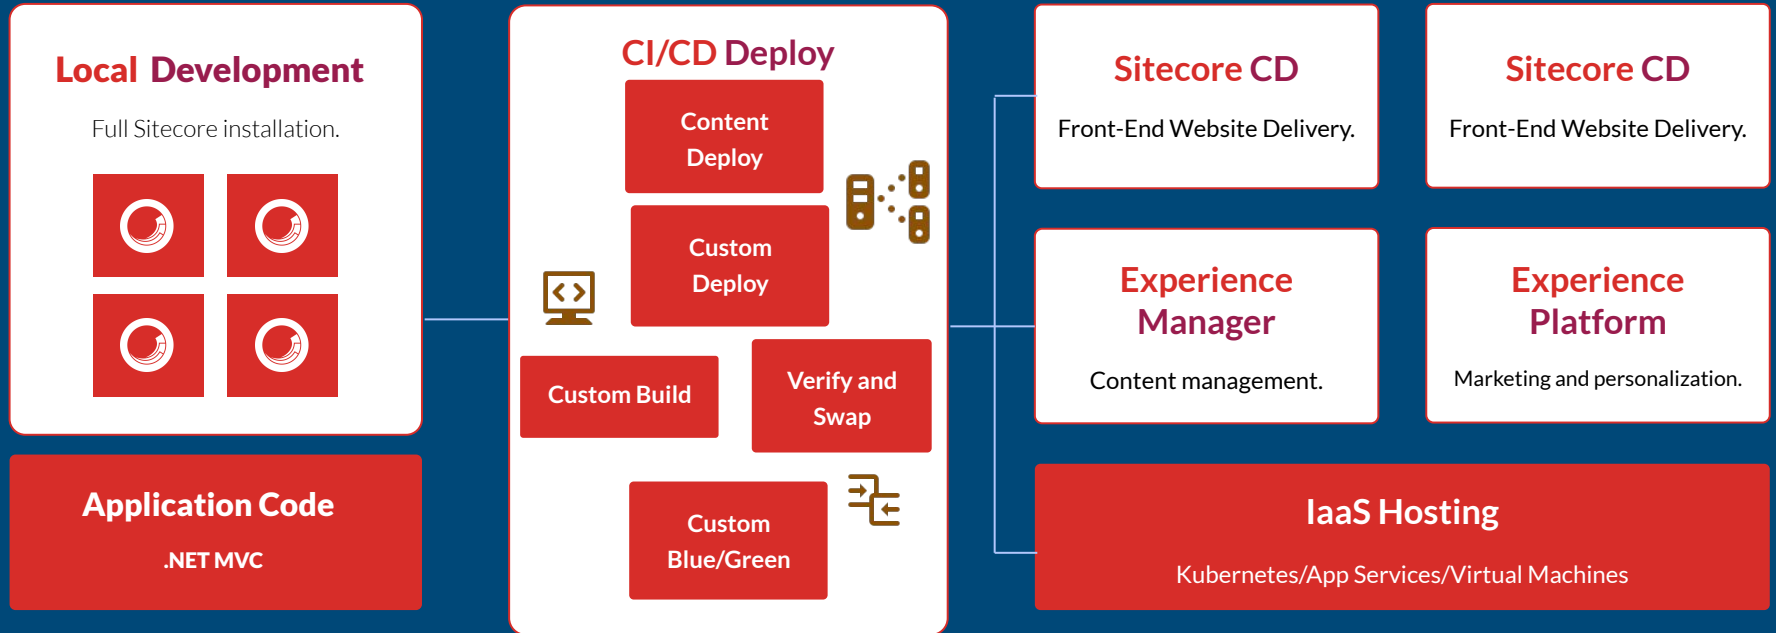

# Move forward

**Building a better tomorrow for your teams**

# Tomorrow on XM Cloud and Serverless

# Tomorrow on XM Cloud and Serverless

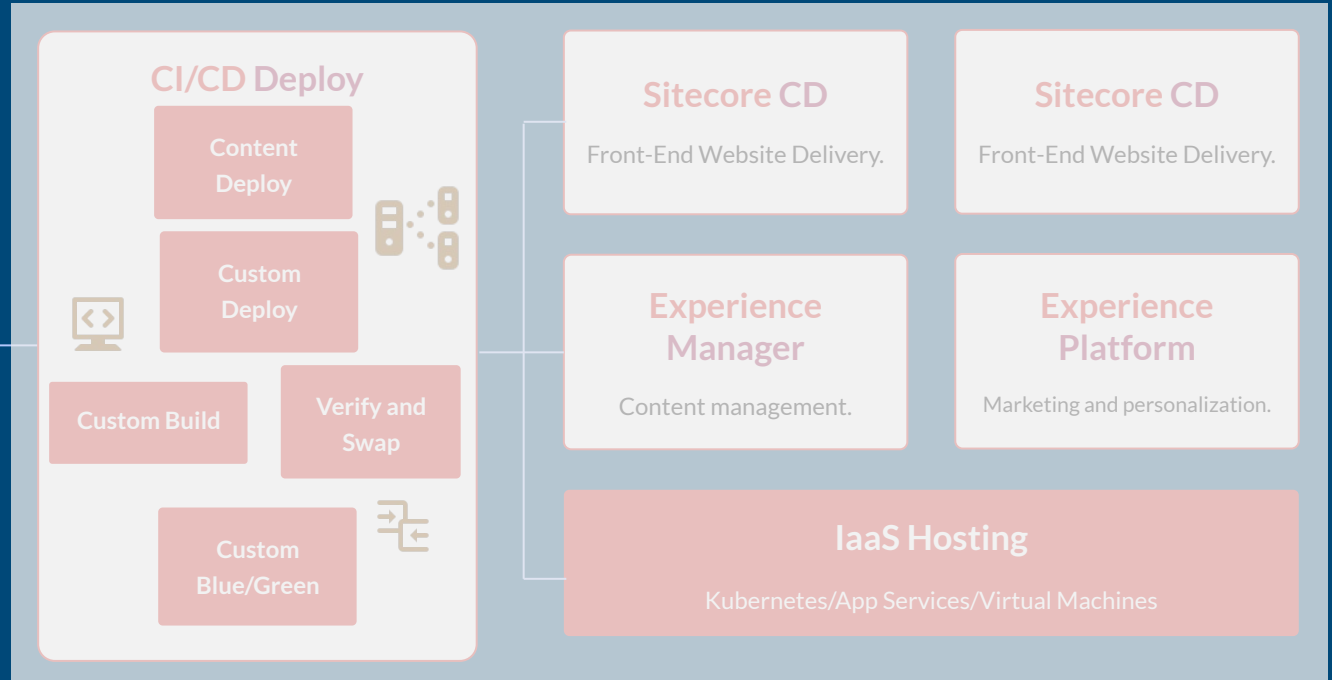

## Local Development

Full Sitecore installation.

## Application Code

.NET MVC

# Tomorrow on XM Cloud and Serverless

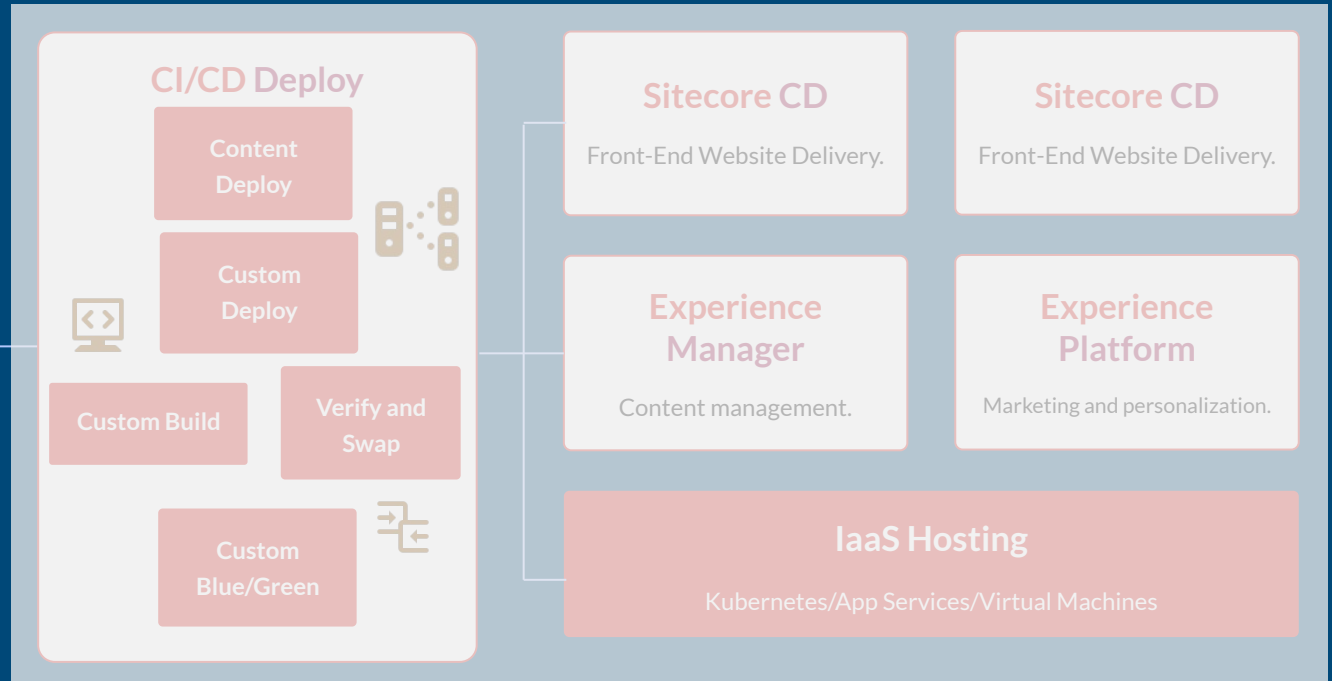

## Local Development

Full Stack or Headless.

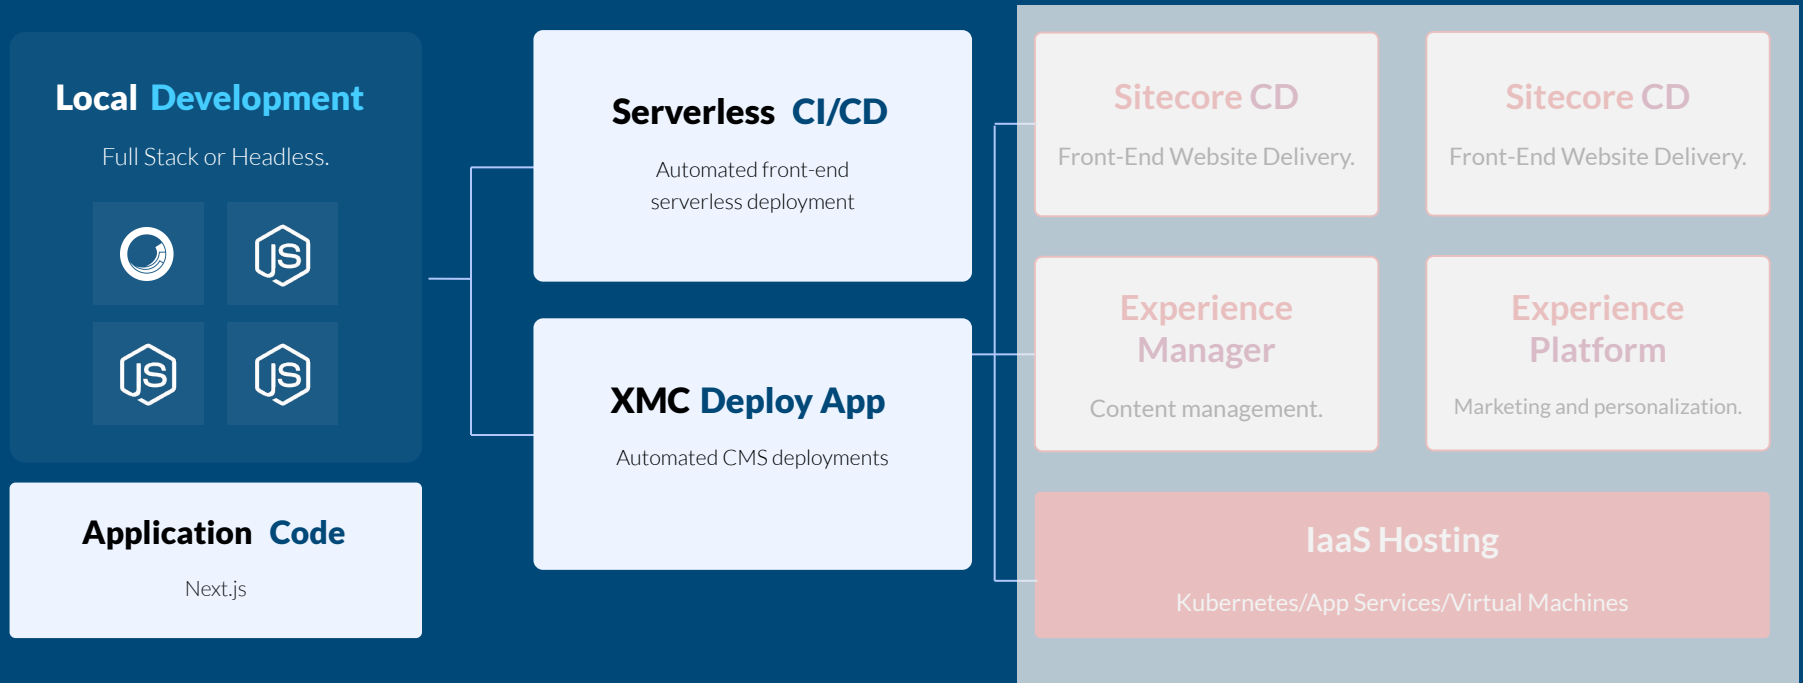

## Application Code

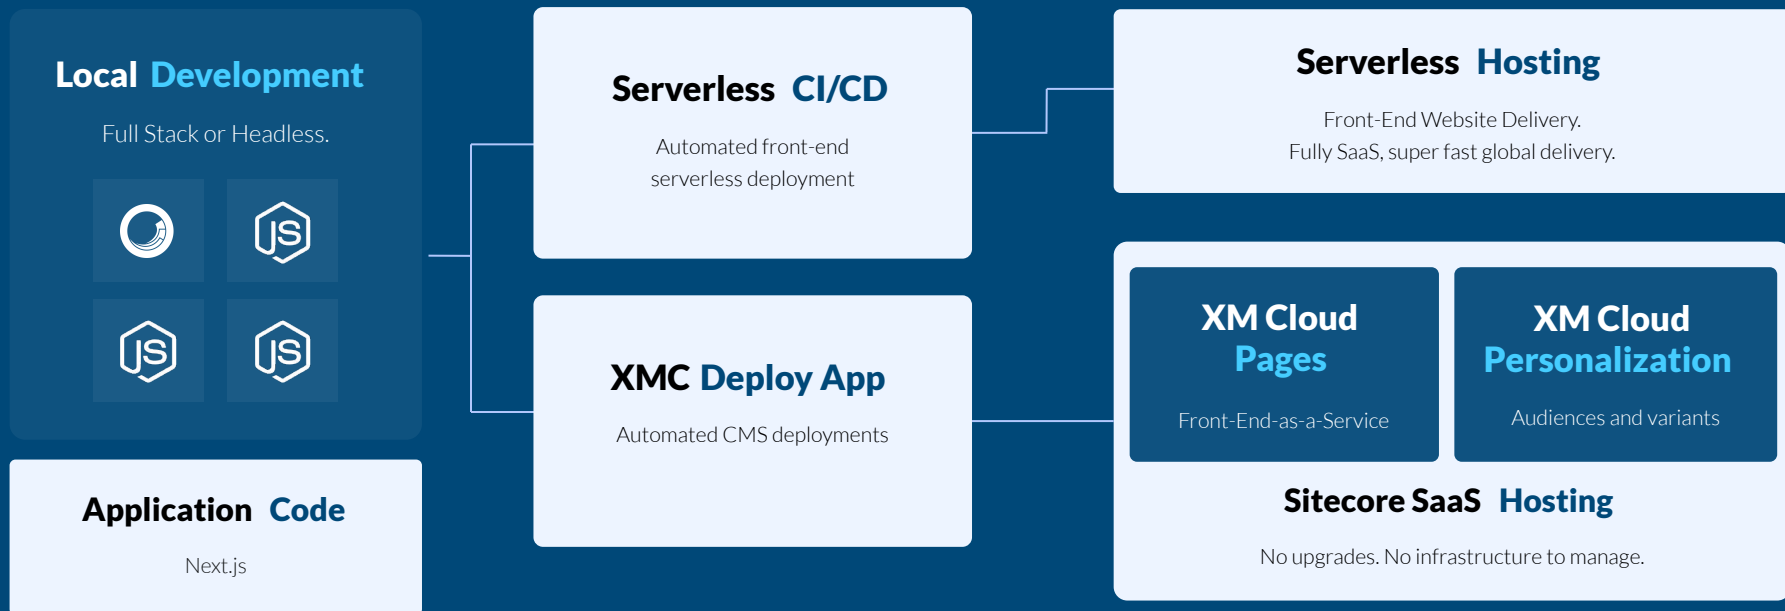

Next.js

# Tomorrow on XM Cloud and Serverless

# Tomorrow on XM Cloud and Serverless

**Sounds like magic. What's the catch?**

# Influencing Factors

**Considerations and strategies for making the move to headless and Sitecore XM Cloud.**

# Considerations Overview

**Cost of  
Cloud Migration**

**Compliance  
and Security**

**Big Bang vs.  
Incremental**

**Search  
and Forms**

**Developer  
Experience**

**XM Cloud  
Personalization**

# Cost of Cloud Migration

## Cost of Cloud Migration

Moving to XM Cloud might be a complex project. Should you upgrade instead? What should you do?

### Out of Compliance With Support?

You need an upgrade, but it might be a big one. **Is it worth it?**

### Time for a Fresh Look?

Already refreshed recently? **Maybe not the time for a move.**

### Aligned with Sitecore Roadmap.

Headless aligns with where **industry and Sitecore are going** .

### Cost of Content Migration?

Analyze what is truly needed and **reduce scope of the project** .

# Compliance and Security

## Compliance and Security

Do you have very rigid infrastructure or data control requirements?

### Validate Compliance Needs

HIPAA, SOC2, ISO 27001, etc.

### How much Control Do You Need?

IaaS options give you more infrastructure control.

### Check Available Regions

Do you have regional privacy or data residency needs?

# Big Bang vs Incremental

## Big Bang vs. Incremental

Some projects might be too large to tackle all at once. However, incremental can cost more in the long run.

### Start Small

Launch one or two sites on XM Cloud, then move others.

### Grow Adoption Iteratively

Gradually spread team **training and upskilling** .

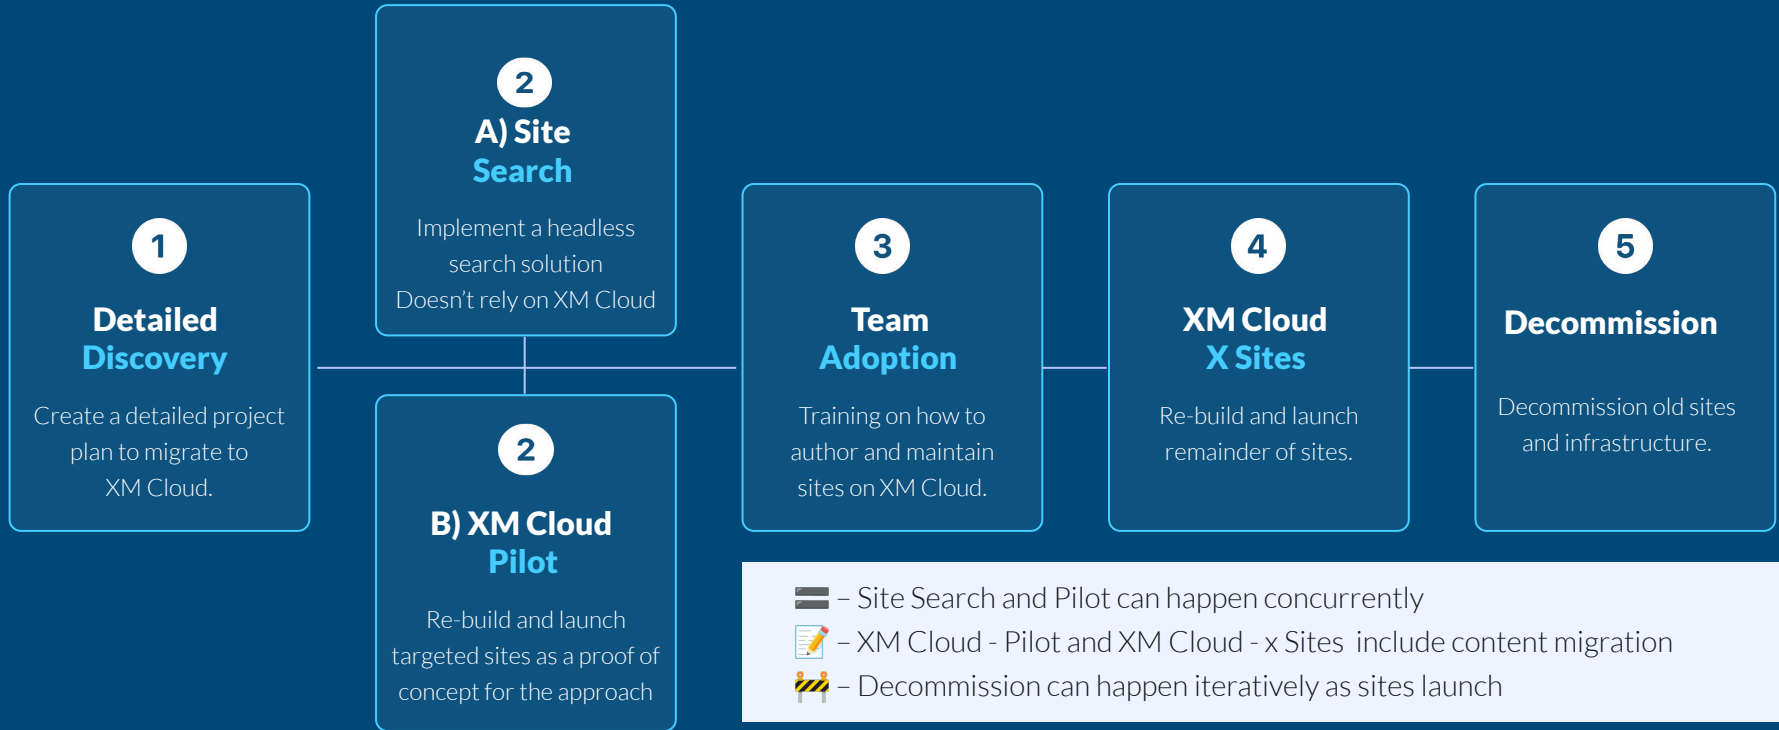

### Plan for Dual Environments

Incremental needs **two production sites running.**

### Identify a Data Strategy

How will you handle **data across multiple systems** ?

# An Example Phased Approach

# Search and Forms

## Search and Forms

Solr search indexes and Sitecore XP's Forms solution are not available in Sitecore XM Cloud

### Pick a Headless Site Search Tool

XMC's API works for listings, but is **not a search engine** .

### Plan for New Forms

**XMC Forms are not compatible** with existing XP Forms.

### Plan a New Strategy

Sources to index?  
Forms to migrate?  
System integration?

# Developer Experience

## Developer Experience

Next.js headless development is not .NET MVC development. And that's a good thing!

### Upskill to Next.js

Traditional .NET MVC teams need to **modernize skills**.

### Learn about Serverless Hosting

Serverless hosting is convenient, but requires adapting.

### Remove CMS Customizations

Sitecore discourages customizing the CMS in XM Cloud.

### Update Serialization

SCS is the path forward right now on XM Cloud.

# XM Cloud Personalization

## XM Cloud Personalization

**Sitecore XM Cloud's  
personalization !=  
Sitecore XP  
personalization**

### Know the Differences

Headless vs server side, **they are not the same engines !**

### Start With Basic XM Cloud

Should meet **80% of most teams' needs .**

### Don't try to Migrate Rules

This is a **rebuild** of the personalization strategy.

### Grow When You Need To

Add **Sitecore Personalize** later as use cases require it.

# Making the Move to **XM Cloud & Serverless**

Stay current with **automatic updates** .

**Turbocharge your performance** with global serverless infrastructure.

**Fortify your digital assets** with solutions that meet compliance needs.

Lower your **Total Cost of Ownership** (TCO) with SaaS solutions.

**Adapt to the latest in technology** with headless and composable architecture.

# Digitally Different
