

NEED TO JUMP START YOUR CAR? HERE'S WHAT TO DO (AND WHAT NOT TO)

1. Which car do you put jumper cables on first?

As you're probably aware, you need two cars to successfully use jumper cables. Start by popping the hoods of both cars open. You must then connect the red and black clamps to the dead battery.

2. HOW LONG SHOULD YOU RUN A CAR AFTER A JUMP?

Once the car has started, let it run for a couple of minutes to generate enough charge for the battery. After that's done, you should unhook the clamps in the reverse order of how you had applied them.

3. DOES JUMP STARTING A CAR DAMAGE THE COMPUTER?

Getting the support of flat battery experts like Service My Car can be immensely beneficial in reducing the risk of electronic damage after a jump start.

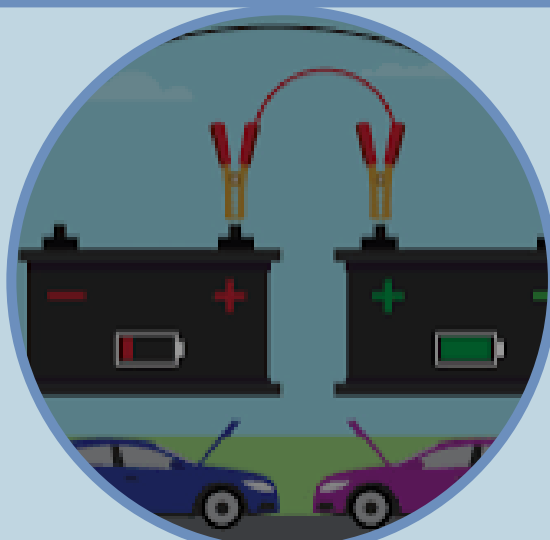

4. WHAT TO DO WHEN JUMP STARTING YOUR CAR?

Before you do anything, go through the owner's manual. It's vital to understand the battery terminals and how they interact with jumper cables.

5. WHAT NOT TO DO WHEN JUMP STARTING YOUR CAR?

Ensure that you never lean over, or stay too close to the batteries of both

6. What to do once you've successfully jump started your car?

If you've reached this stage after successfully jump starting your car, then congratulations! Your next few steps are absolutely crucial.

- Once you've successfully jump started your car, let it sit and idle for anywhere between 5-10 minutes. This will help charge the dead battery.
