

# Template Overrides

Hans Kuijpers  
2Value & Jira ICT

[hans2103](#)

# What are template overrides

- Changing the way Joomla! shows something without changing the core files
- Comes in handy when upgrading Joomla!

# How do Template Overrides work in Joomla?

- 1.Joomla! assembles the information needed to show a web page
- 2.Joomla! uses a template to position that information and show it

# Example 1

## BEEZ with and without

# BEEZ template

## using no template override

- lots of tables in source
- Google is blind

```
</div><!-- left -->

<a name="content"></a>
<div id="wrapper">
<div id="main2">

    <div class="componentheading">
        Welcome to the Frontpage</div>

**JOOMLA! COMMUNITY PORTAL**

Last Updated on Saturday, 07 July 2007 09:54  
Written by Administrator  
Saturday, 07 July 2007 09:54

The [Joomla! Community Portal](#) is now online. There, you will find a constant source of information about the activities of contributors powering the Joomla! Project. Learn about [Joomla! Events](#) worldwide, and see if there is a [Joomla! User Group](#) nearby.

The [Joomla! Community Magazine](#) promises an interesting overview of feature articles, community accomplishments, learning topics, and project updates each month. Also, check out [JoomlaConnect™](#). This aggregated RSS feed brings together Joomla! news from all over the world in your language. Get the latest and greatest by clicking [here](#).

## BEEZ template

- locate code in template override
- select code and cut

The screenshot shows the MAMP application window. The title bar says "default\_item.php - MAMP". The menu bar includes "MAMP", "Sites", "Wijzig", "Voorvertoning", "CSS", "Terminal", and "Boeken". The left sidebar shows the local file structure under "Joomla": logs, media, modules, plugins, robots.txt, templates (with beezez selected), component.php, css, favicon.ico, html (with com\_contact, com\_content, article, category, frontpage selected), default\_item.php (selected), default\_links.php, default.php, index.html, index.html, section, com\_newsfeeds, com\_poll, com\_search, com\_user, com\_weblinks, editor\_content.css, index.html, and mod\_latestnews. The main pane displays the PHP code for default\_item.php, with line numbers 21 through 60 visible. The code handles various Joomla item parameters like show\_intro, show\_pdf\_icon, show\_email\_icon, etc. A status bar at the bottom indicates "Hints" and provides information about programming language support.

```
<?php if (!$this->item->params->get('show_intro')) :  
    echo $this->item->event->afterDisplayTitle;  
endif; ?>  
  
<?php if ($this->item->params->get('show_pdf_icon') || $this->item  
|| $this->item->params->get('show_email_icon')) : ?>  
<p class="buttonheading">  
    item->params->get('show_pdf_icon')) :  
    echo JHTML::_('icon.pdf', $this->item, $this->item->params  
endif;  
if ($this->item->params->get('show_print_icon')) :  
    echo JHTML::_('icon.print_popup', $this->item, $this->item

# Example 3 Joomla! 1.5.11 bug solved using template override

because we can

## Joomla! 1.5.11

- In components/com\_content/views/category tmpl/default\_items.php line 68 there's is a ; ?> too many.
- This causes the output on category list layout output is wrong.

The screenshot shows the Joomla! 1.5.11 homepage with a sidebar containing three boxes: "Main Menu", "Key Concepts", and "Example Pages". The "Main Menu" box lists various links. The "Key Concepts" box lists "Extensions", "Content Layouts", and "Example Pages". The "Example Pages" box lists "Section Blog", "Section Table", "Category Blog", and "Category Table". The main content area displays a category list titled "FAQs/Languages category". An arrow points to a closing tag in the output of the "Category Table" list item, indicating a bug in the template file. The page also features a sidebar with a "Title Filter" and a "Display # 20" dropdown, and a promotional section for Joomla! gear.

With a library of thousands of free [Extensions](#), you can add what you want to your site today. Visit the [Joomla! Extensions](#) library today.

# Solving

in this case two options

1. core hack
2. template override

since this presentation is about template override

- Locate the component or module
- Copy the relevant file to override
- Paste into template
- Modify file

note: core hack is better in this case.

note: bug will be solved in Joomla! 1.5.12

## Modify file

- locate row 68
- delete "; ?>"
- save file

default\_items.php - MAMP

## Joomla! 1.5.11

- refresh page and view the result of this rocket science

The screenshot shows the Joomla! 1.5.11 homepage with a blue header bar. The header features the Joomla! logo and the tagline "...because open source matters". A navigation menu with tabs for "About Joomla!", "Features", "News", and "The Community" is visible. Below the header, a breadcrumb trail shows "Home >> Category Table". On the left side, there are three blue-bordered boxes: "Main Menu" (listing Home, Joomla! Overview, Joomla! License, More about Joomla!, FAQ, The News, Web Links, News Feeds, and Eventlist), "Key Concepts" (listing Extensions, Content Layouts, and Example Pages), and "Example Pages" (listing Section Blog, Section Table, Category Blog, and Category Table). The main content area is titled "Example of Category Table layout (FAQs/Languages category)" and contains a list of five questions related to localization and languages. An arrow points upwards from the bottom right towards the "Category Table" link in the main content. The footer includes copyright information (Copyright © 2009 JD09NL. All Rights Reserved. Joomla! is Free Software released under the GNU/GPL License.) and a "Feed Your Brain" section featuring book covers for "Beginning Joomla!" and "Source Joomla!". The footer also features a cartoon illustration of a windmill and a house.

# Steps to using Template Overrides

- Locate the component or module
- Copy the relevant file to override
- Paste into template
- Modify file

## Original code

```
<?php // no direct access
defined('_JEXEC') or die('Restricted access'); ?>
<div>
    <strong><?php echo JText::_('More Articles...'); ?></strong>
</div>
<ul>
<?php foreach ($this->links as $link) : ?>
    <li>
        <a class="blogsection" href="<?php echo
JRoute::_('ContentHelperRoute::getArticleRoute($link->slug, $link->catslug, $link->sectionid)); ?>">
            <?php echo $this->escape($link->title); ?></a>
        </li>
<?php endforeach; ?>
</ul>
```

## New code

```
<?php // no direct access
defined('_JEXEC') or die('Restricted access'); ?>

<ul>
<?php $current_date = ""; ?>
<?php $max_chars = 70; ?>
<?php foreach ($this->links as $link) : ?>

    <?php
        $item_date = JHTML::_('date', $link->created, JText::_('DATE_FORMAT_LC1'));

        if( $current_date != $item_date ) {
            $current_date = $item_date ;
            ?>
            <li class="date"><?php echo $item_date ?></li>
            <?php
            }
            ?>

    <?php
        $introtext = strip_tags( $link->introtext ) ;
        if( strlen( $link->title ) > $max_chars ) {
            $link->title = substr( $link->title, 0, $max_chars ) . '...';
            $introtext = " ";
        } elseif( strlen( $introtext ) + strlen( $link->title ) ) > $max_chars ) {
            $introtext = substr( $introtext, 0, $max_chars - strlen( $link->title ) ) . '...';
        }
        ?>

    <ul>
        <li class="item"><a class="blogsection" href="<?php echo
JROUTE::_('ContentHelperRoute::getArticleRoute($link->slug, $link->catslug, $link->sectionid)); ?>"><?php
echo $link->title; ?></a>
