Web Design for Startups

This page is JANKY (Framerate is below 50 FPS)

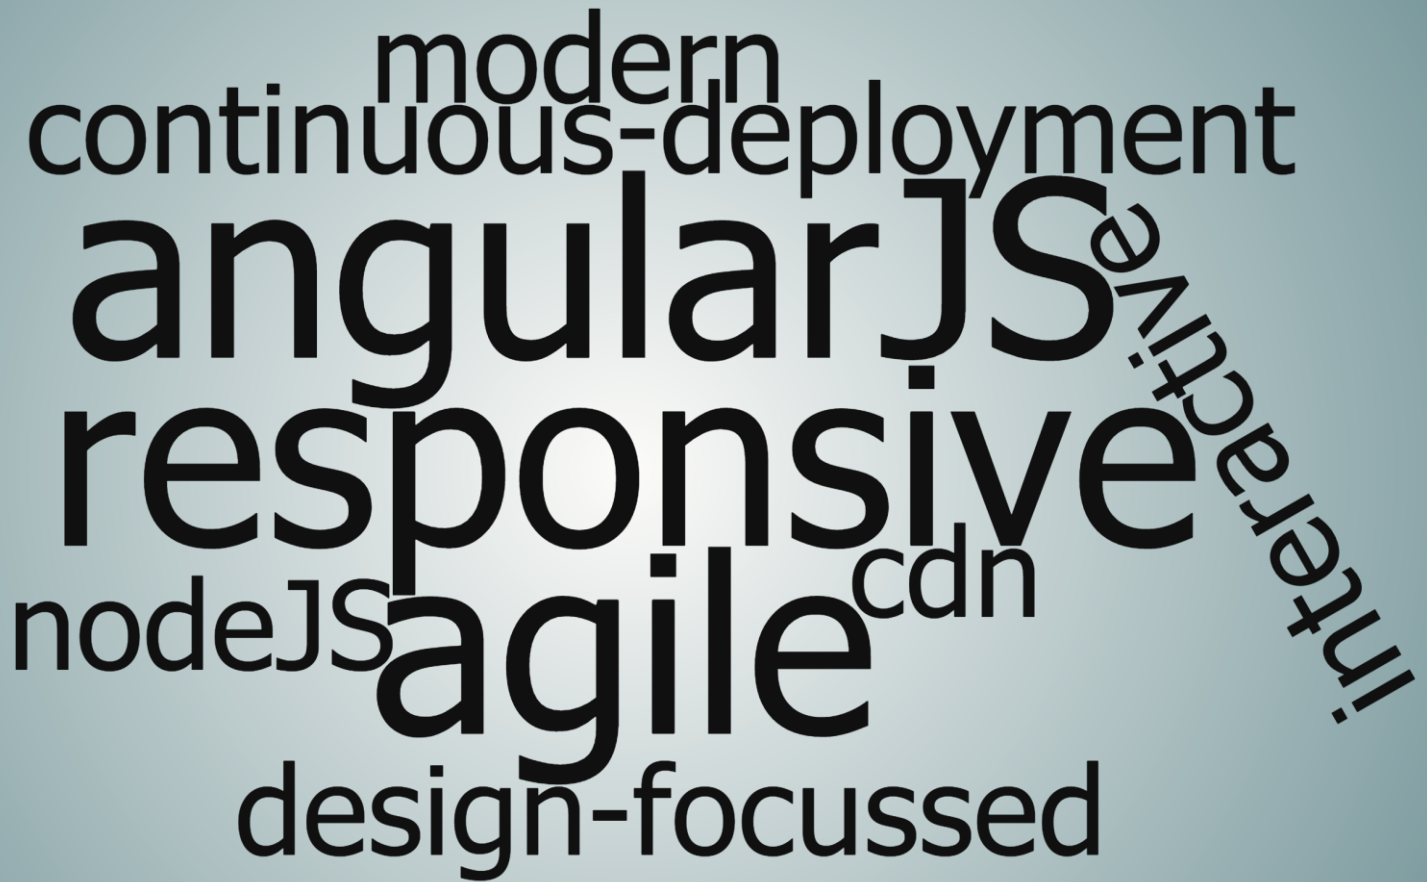

What's this? | Hide this.

1. Device Diversity
2. Developer Convenience
3. Unpredictable Hardware
4. JavaScript Performance is Critical to User Experience
5. We Don't Have the Tools
6. So What Do We Do?

We're launching a new site!

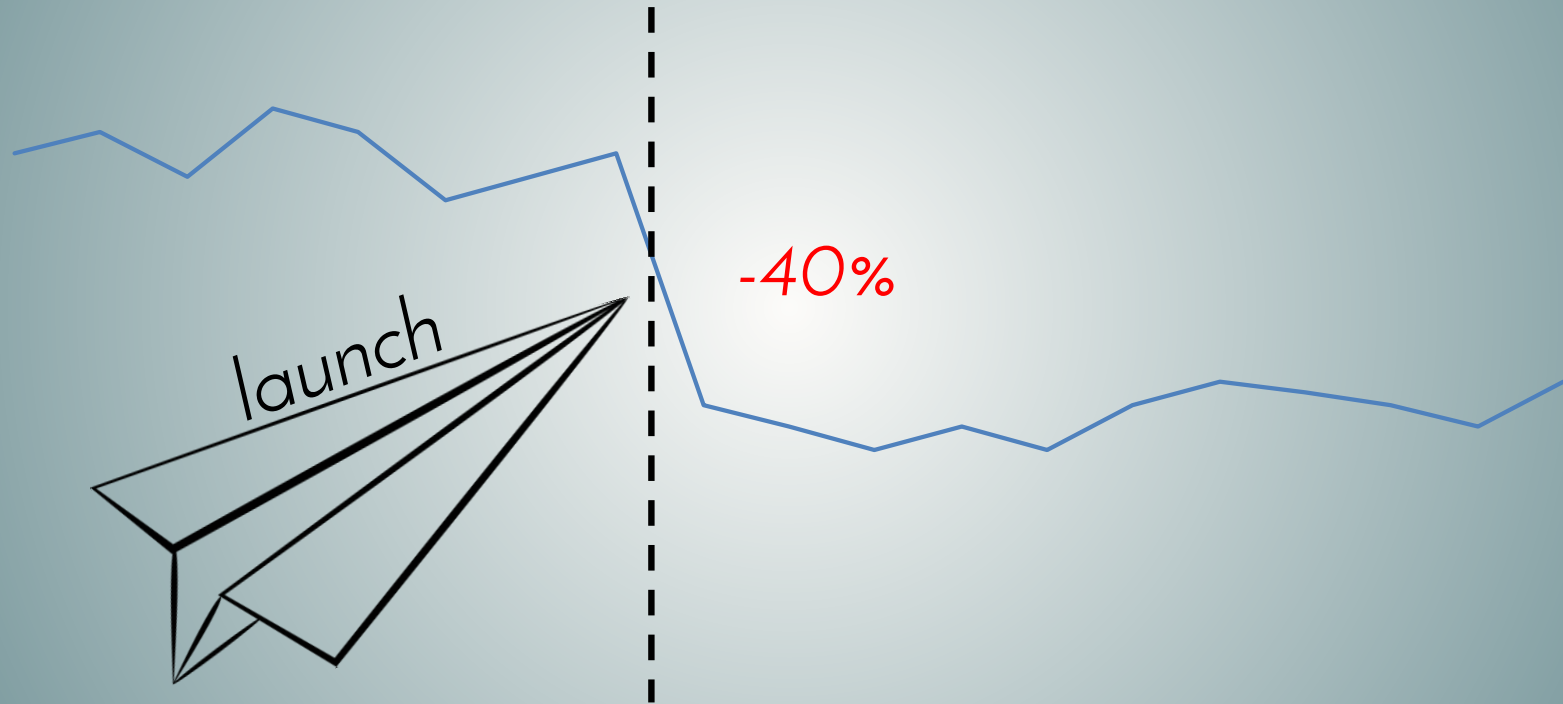

A word cloud of web development and deployment terms. The words are arranged in a roughly circular pattern, with 'angularJS' and 'responsive' being the largest and most prominent. Other terms include 'modern', 'continuous-deployment', 'agile', 'design-focussed', 'nodeJS', 'cdn', and 'interactive'. The words are in various orientations and sizes, creating a dynamic visual effect.

modern
continuous-deployment
angularJS
responsive
agile
design-focussed
nodeJS
cdn
interactive

Performance was 'the same'

High conversion rate expectations...

CEO

User feedback was poor

"old-fashioned"

"hard to use"

"clunky"

"frustrating"

"tired"

"slow"

RUM

Smartphone experience slower than desktop

“

people on mobile
expect a slower experience

”

A Customer

**Your users' expectations are set
by their most recent interactions.**

**Your users' expectations are set
by their most recent interactions.**

**On mobile, that means you're competing
with the OS and native applications**

Mobile users are not patient.

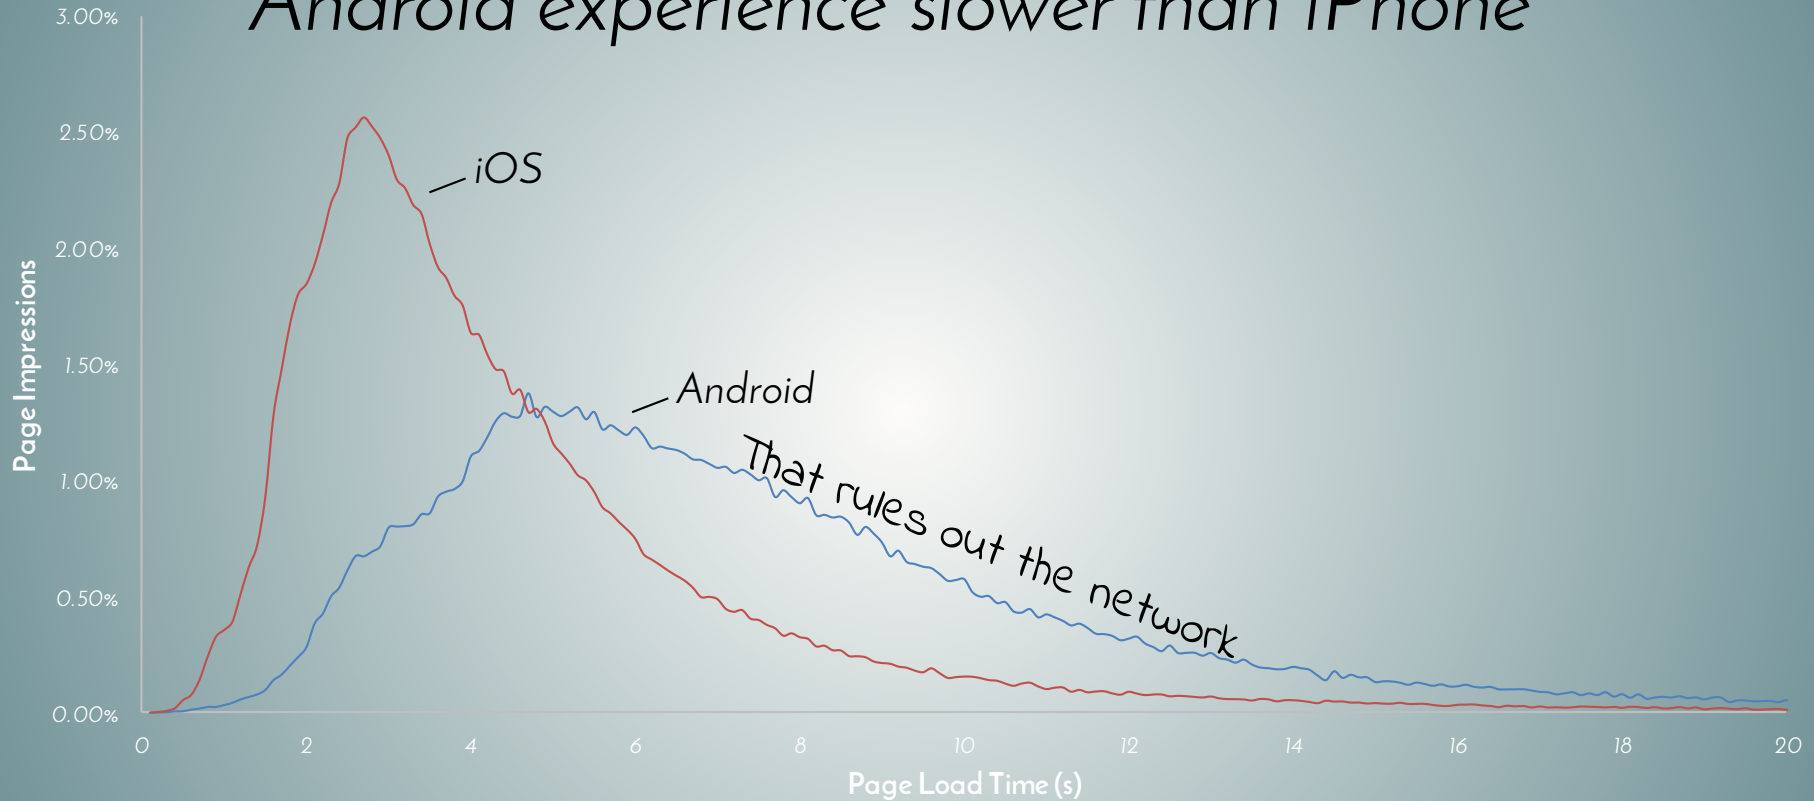

Mobile users are not patient.

53%

*of visits are abandoned if a mobile
page takes over three seconds*

The need for mobile speed. DoubleClick, September 2016.

Android experience slower than iPhone

1

Device Diversity

*Increasing device diversity has led to a
'great on some, okay on all' attitude*

Media Queries

W3C Candidate Recommendation 6 June 2007

COMING SOON TO A FUTURE NEAR YOU...

WEARABLE WEB BROWSERS

*Responsive (generally) means a
desktop site on non-desktop devices*

RULE 1

Responsive Web Design Is Not Enough

2

Developer Convenience

*We prioritise developer convenience
over user experience*

“Responsive web design is a fluid grid, flexible images and media queries”

Ethan Marcotte
(2010)

i.e.

*develop one code-base &
compromise on most viewports*

the way we consume the web has changed

19%

*of adults in the United States are
Smartphone-dependent*

<http://www.pewinternet.org/2015/04/01/us-smartphone-use-in-2015/>

Mobile revenue share is increasing

16.9%
of digital revenue is mobile

2016 U.S. Cross Platform Future in Focus - ComScore Inc.

the way we develop for the web has changed

ANGULARJS

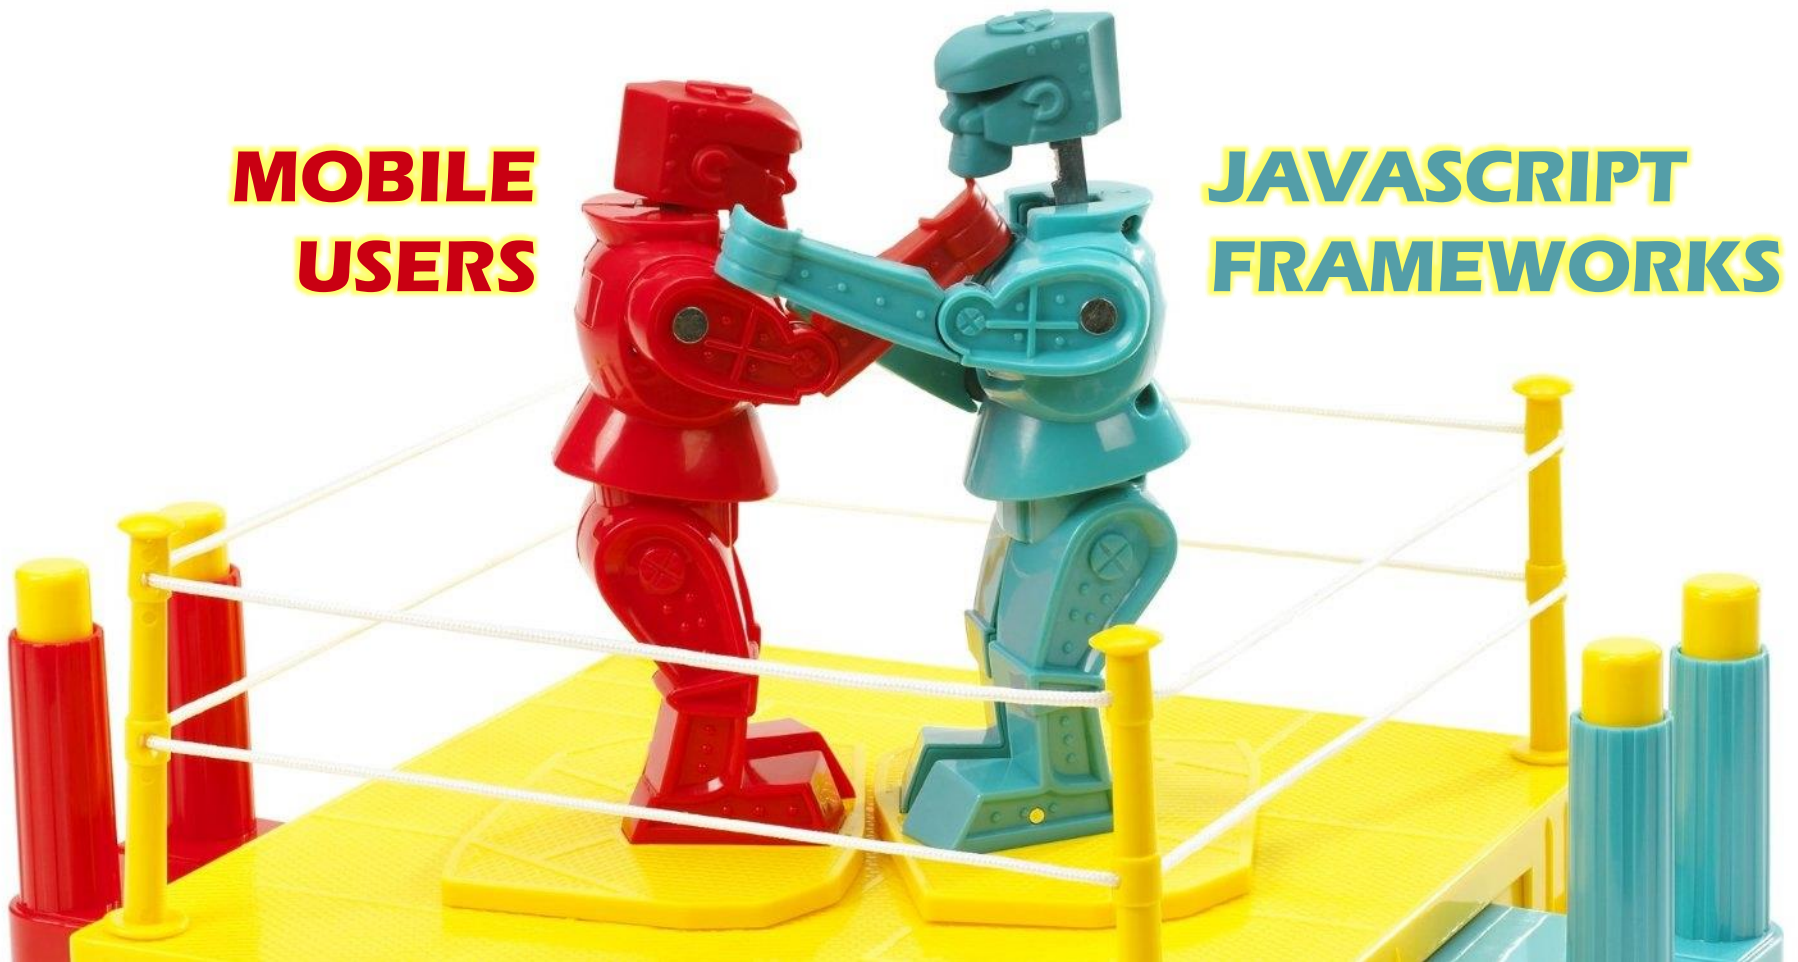

2007

2016

**MOBILE
USERS**

**JAVASCRIPT
FRAMEWORKS**

“among our 5,400 panellists

15%

*do not have JavaScript
enabled devices”*

“BuildingPew Research Center’s American Trends Panel,” April 8, 2015

1.1%

*of UK traffic does not
execute JavaScript*

<https://gds.blog.gov.uk/2013/10/21/how-many-people-are-missing-out-on-javascript-enhancement/>

JavaScript frameworks take our code from a safe and controlled environment (server) to the wild west (client).

RULE 2

Question the Use of JavaScript Frameworks

3

Unpredictable Hardware

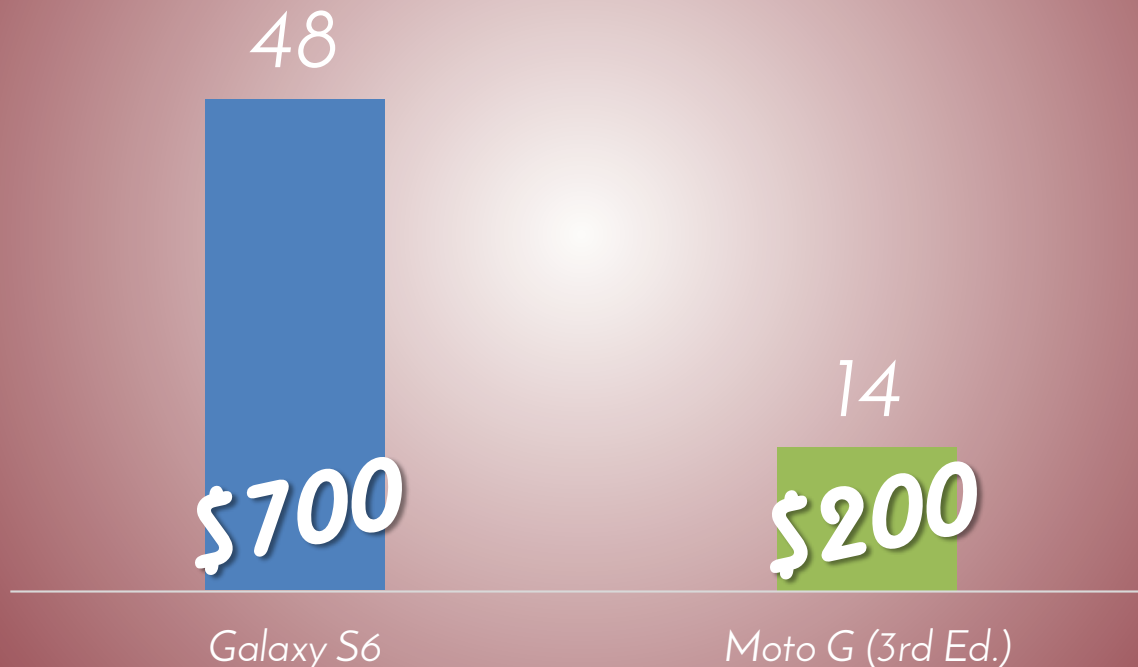

*We can't control our users' devices.
Even high-end devices can perform poorly.*

our customers use iPhones and
“ high-end Android phones,
so performance isn't an issue ”

A Customer

Adapting for the Times

@steveworkman #perfmatters

<https://speakerdeck.com/steveworkman/adapting-for-the-times?slide=22>

RULE 6

Split Your Codebase When Necessary

SUMMARY

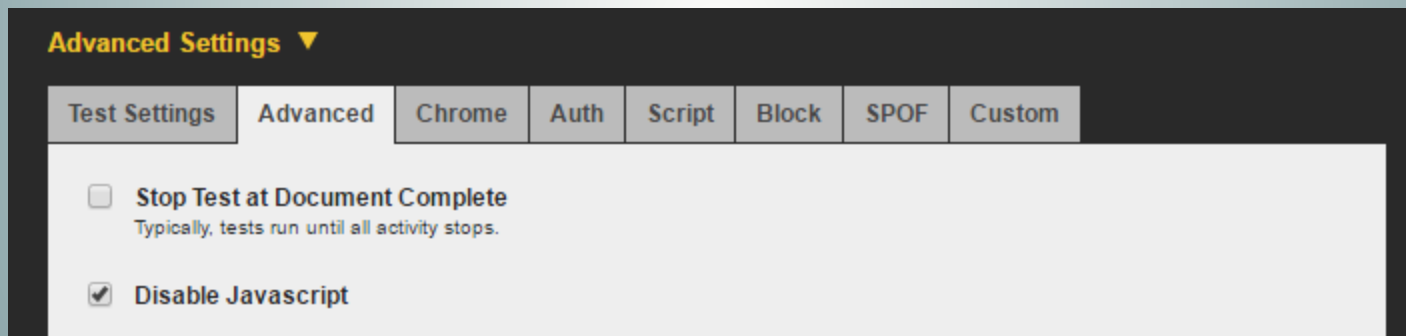

1. *Responsive Web Design is Not Enough*
2. *Question the Use of JavaScript Frameworks - yes, even jQuery*
3. *Test on Low-End Hardware - It's Cheap!*
4. *Measure and Monitor CPU Usage - Including page interactions!*
5. *Understand the Data & Invest in a Mobile Lab*
6. *Split the Codebase When Necessary*

WE HAVEN'T COVERED IT ALL

1. *Mobile networks - 5G is coming*
2. *Third-Party Content*
3. *AMP*
4. *Image Performance*

ONE THING

Test your mobile site in WebPageTest with JavaScript disabled

(using emulation as it doesn't work on devices)

Thank You

Stay in touch!
