Going beyond technical accessibility

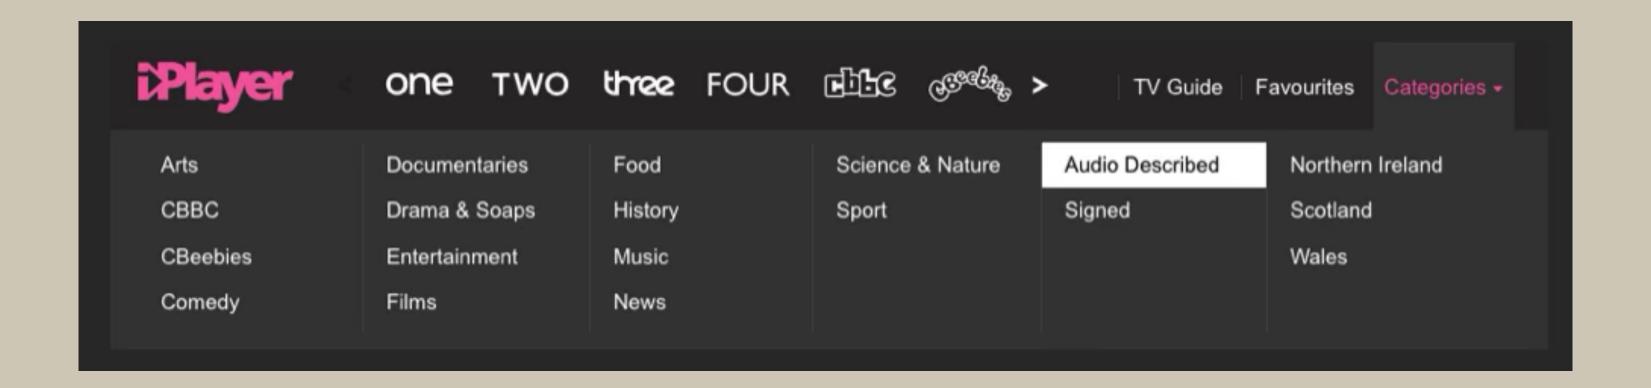

Primary information placed too far down the page

Four UX Principles

- Give users choice.
- Put users in control.
- Design with **familiarity** in mind.
- Prioritize features that **add value**.

British Gardens in Time

3. Biddulph Grange

Biddulph Grange takes the visitor on a journey around the world from China to Egypt.

Known issues (1) Sub-features (5) Resources (7) Feedback

Different browsers have support for different video formats, see sub-features for details.

- 1 The Android browser (before 2.3) requires specific handling to run the video element.
- ² Old Firefox versions were missing support for some properties: loop was added in v11, played in v15, playbackRate in v20.
- 3 Ignores the autoplay attribute by default, though autoplay behavior can be enabled by users

Method of playing sound on webpages (without requiring a plug-in). Includes support for the following media properties: currentSrc, currentTime, paused, playbackRate, buffered, duration, played, seekable, ended, autoplay, loop, controls, volume & muted

H.264 (proprietary)

AV1 (open, free, future)

H.265/HEVC (proprietary, future)

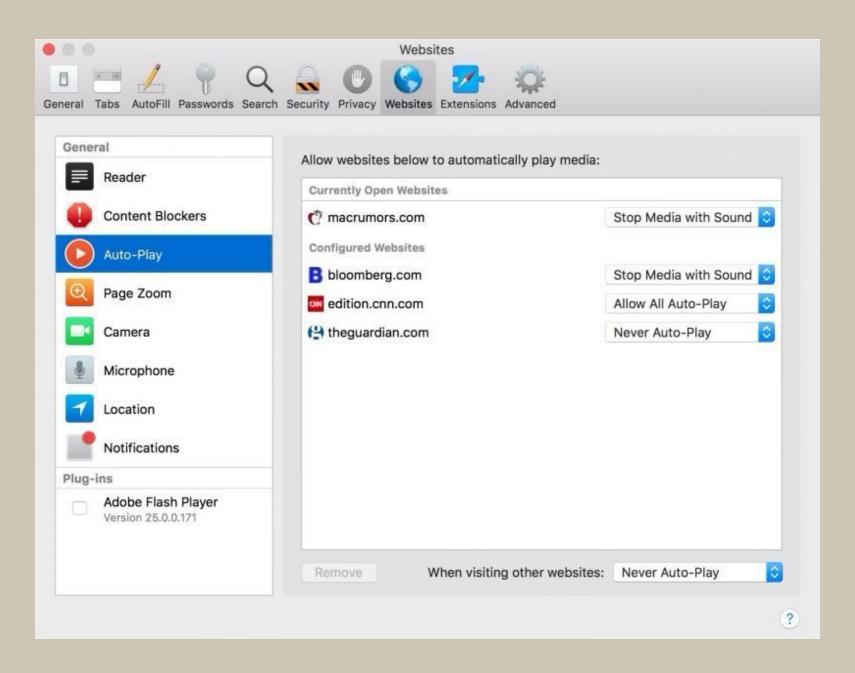

Media Queries

Interesting Attributes

- poster displays an image when stopped
- controls display start/stop/volume controls
- autoplay starts the resource on load (don't use!)
- loop loops the media resource
- muted starts muted

On Autoplay

Video Players SWS¹

¹ "See what sucks" (<u>videosws.praegnanz.de</u>)

Audio works the same

way

"MP3 is dead" missed the real, much better story

May 15, 2017 ∞

If you <u>read the news</u>, you may think the MP3 file format was recently officially "killed" somehow, and any remaining MP3 holdouts should all move to AAC now. These are all simple rewrites of <u>Fraunhofer IIS'</u> <u>announcement</u> that they're terminating the MP3 patent-licensing program.

Very few people got it right. The others missed what happened last month:

If the longest-running patent mentioned in the aforementioned references is taken as a measure, then the MP3 technology became

If the longest-running patent mentioned in the aforementioned references is taken as a measure, then the MP3 technology became patent-free in the United States on 16 April 2017 when U.S. Patent 6,009,399, held by and administered by Technicolor, expired.

MP3 is supported by everything, everywhere, and is now patent-free.

Both elements are completely scriptable.

```
var video = document.getElementById('video');
var playpause = document.getElementById('playpause');
video.onpause = function(e) {
    playpause.value = 'Play';
    playpause.onclick = function(e) {
        video.play();
video.onplay = funtion(e) {
    playpause.value = 'Pause';
    playpause.onclick = function(e) {
        video.pause();
```

Audio Descriptions

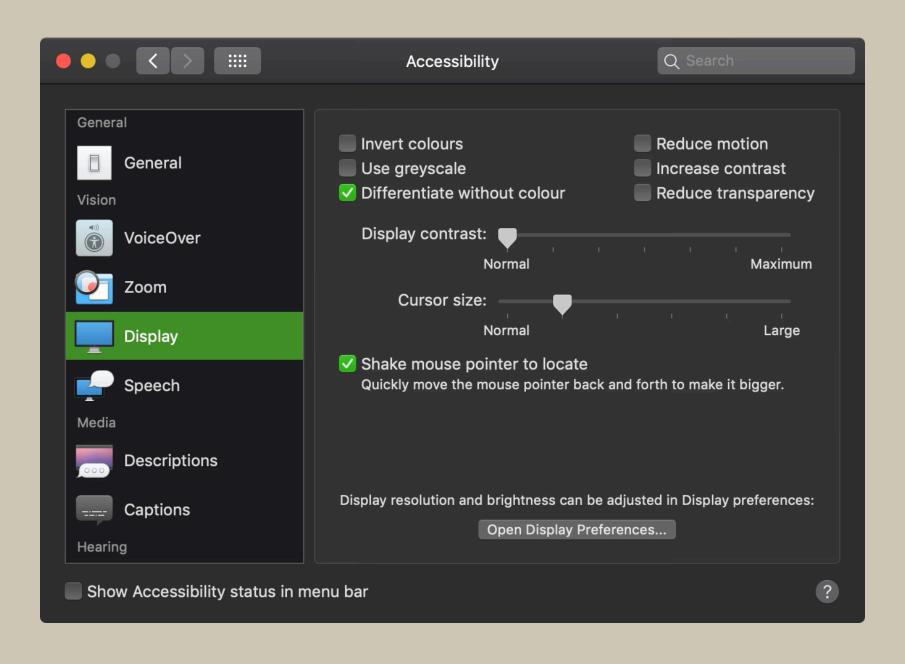

Animation in General

As in Operating System

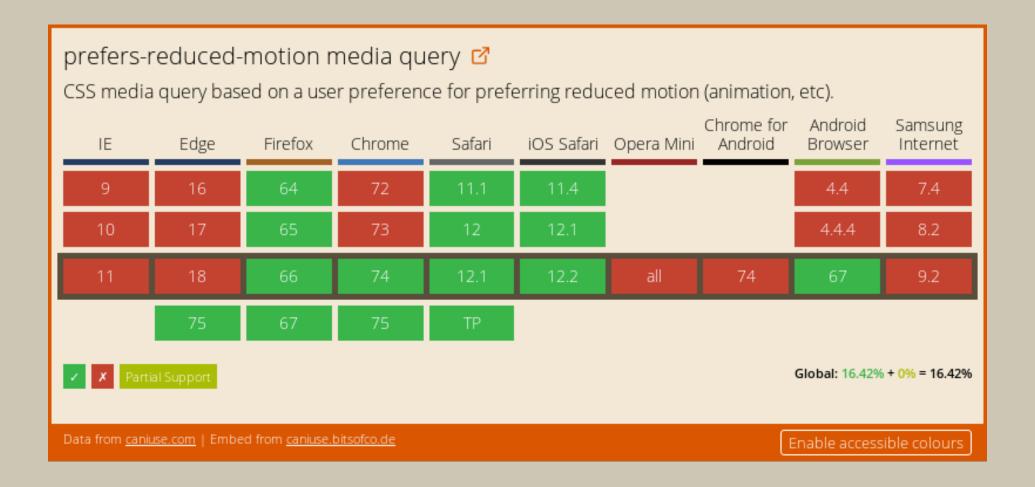

OS Settings

prefers-reduced-motion Media Query

```
@media (prefers-reduced-motion: reduce) {
    * {
        transition: none !important;
        animation: none !important;
    }
}
```

Support

On Windows ...it's complicated

Thread Reader App 17 tweets - 11 Mar 2019

prefers-reduced-motion query now in Chrome Canary

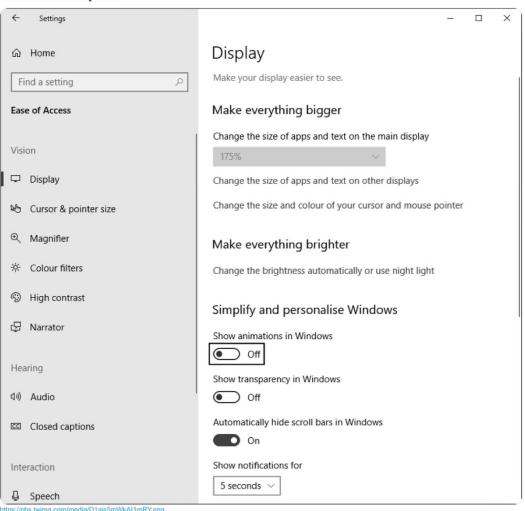

https://developers.google.com/web/updates/2019/03/prefers-reduced-motion

... and at this stage worth pointing out that on Windows, many users MAY have inadvertently set their accessibility preference, but did so to disable Windows' own animations...

i.e. not because they have a specific desire/need not to see animations in general, but just to disable the subtle animations for apps minimizing/maximizing etc. there's actually two/three settings in Windows (and some seem weirdly interconnected, or maybe i'm imagining things)

there's Settings > Ease of Access > Display > Show Animations - this, to my knowledge, is the big master switch for turning off Windows' own animations AND setting the preference that translates to prefers-reduced-motion opt-in...
