CNCF On-Demand Webinar: Reduce the carbon footprint of your cloud-native workloads now

Thursday April 29, 2021, 12AM PDT

Presented by: ITRenew

[REGISTER NOW](#) ↗

Cloud-native applications have come of age. Most companies making the shift to Kubernetes are seeking productivity improvements, resource efficiency, portability, and increased scalability. The large hyperscaler cloud providers have been driving significantly better results from their hardware and software stacks by adopting open hardware architecture and open source software. But are these gains readily available to the average data center provider running cloud native workloads? And are the power and carbon footprint improvements over typical rack systems significant enough to warrant a change to open architecture? The answer to both is yes.

Cloud-native applications have come of age. Most companies making the shift to Kubernetes are seeking productivity improvements, resource efficiency, portability, and increased scalability. The large hyperscaler cloud providers have been driving significantly better results from their hardware and software stacks by adopting open hardware architecture and open source software. But are these gains readily available to the average data center provider running cloud native workloads? And are the power and carbon footprint improvements over typical rack systems significant enough to warrant a change to open architecture? The answer to both is yes.

Join Erik Riedel of ITRenew, and Andy Randall of Kinvolk, to learn about reducing your carbon footprint and achieving better computing economics for your cloud-native workloads today.

Mission

To build and promote a
100% open source
enterprise-grade
Cloud-Native stack

kubernetes

Data Center Facility

Sub-Projects:

Modular Data Center
Critical Facility Operations - Incubation
Advanced Cooling Facility - Incubation

Hardware Management

Sub-Projects:

OpenRMC
Hardware Management Module - Incubation
Hardware Fault Management - Incubation

Networking

Sub-Projects:

ONIE
Open Network Linux
SAI
SONiC

Open System Firmware

Rack & Power

Sub-Projects:

ACS Immersion
ACS Cold Plate
ACS Door Heat Exchange

Security

Server

Sub-Projects:

High Performance Computing - Incubation
Mezz (NIC)
Open Accelerator Infrastructure
Open Domain-Specific Architecture

Storage

Telco

Sub-Projects:

openEDGE

Products that comply 100% with an existing accepted specification and the design files are open sourced and available.

OCP
ACCEPTED

Products that comply 100% with an existing accepted specification and are available from OCP Silver, Gold or Platinum Member.

OCP
INSPIRED

Worldwide Delivery, Service, Support Network
