

Autocodec

Self-Decoding Graphs

High Level

Pure Functions FTW

High Level

Why?

High Level

Why?

- ♦ Dynamically load codecs
- ♦ Instantly discoverable, travels with data
- ♦ Content signalling

High Level

Blob vs DSL

High Level

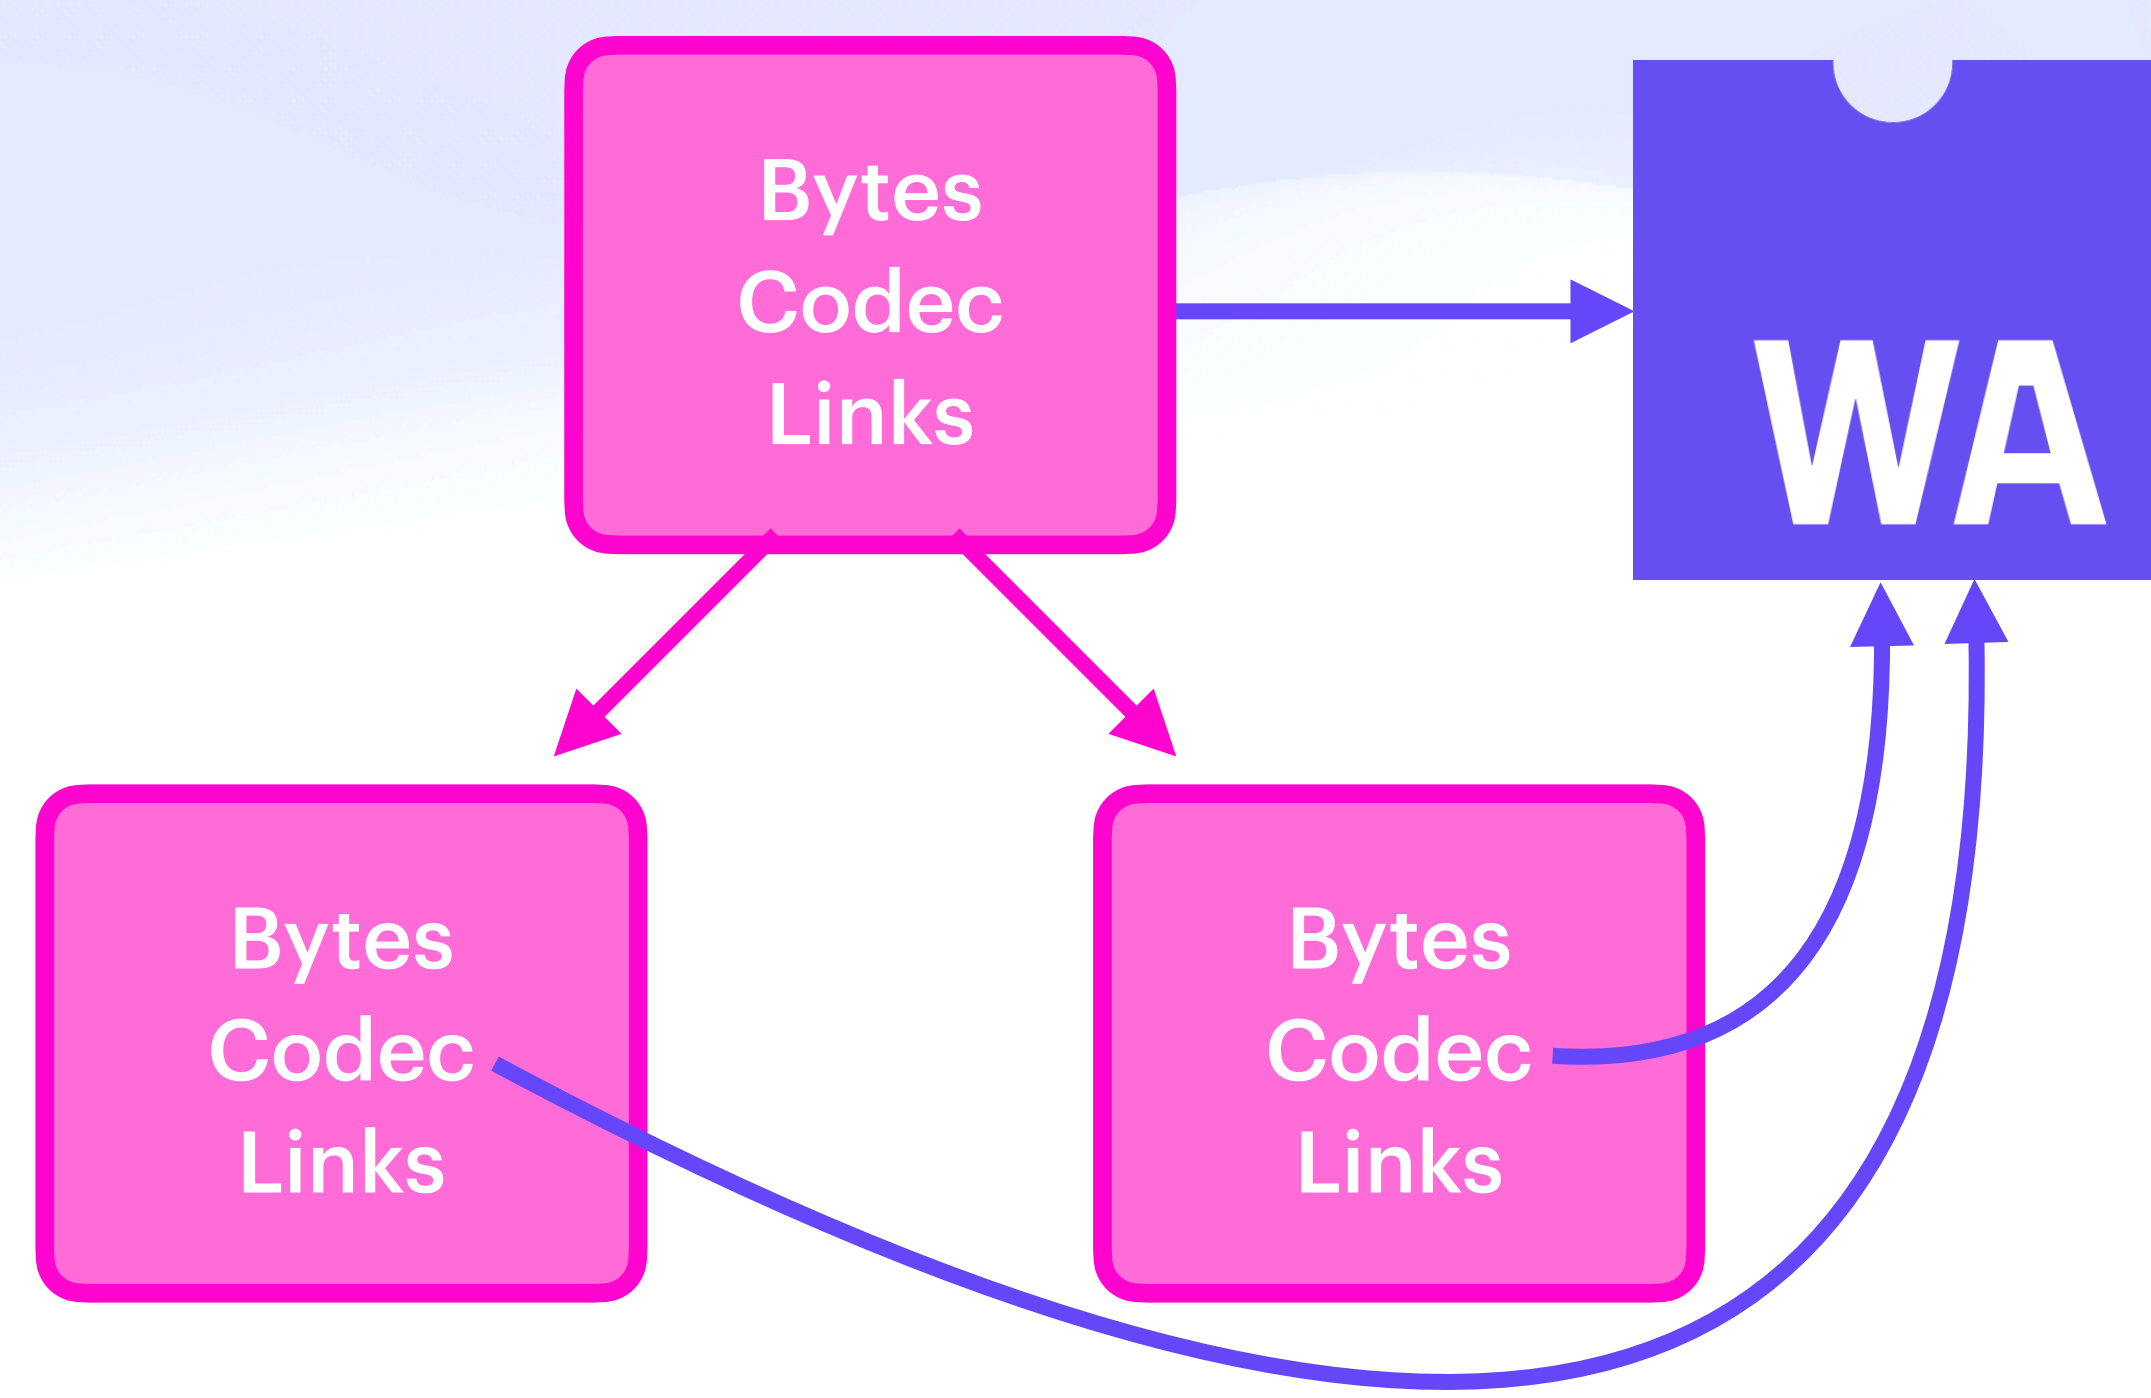

Blob vs DSL

- ◆ Content addressed Wasm blob
- ◆ Alternate: schema
 - ◆ More "correct" via DSL, but would likely be extremely complex
- ◆ "Worse is better"
 - ◆ Adoptable, familiar
 - ◆ Easy tooling
 - ◆ "Do exactly what I mean"
 - ◆ Openly extensible

Layout Options

Layout Options

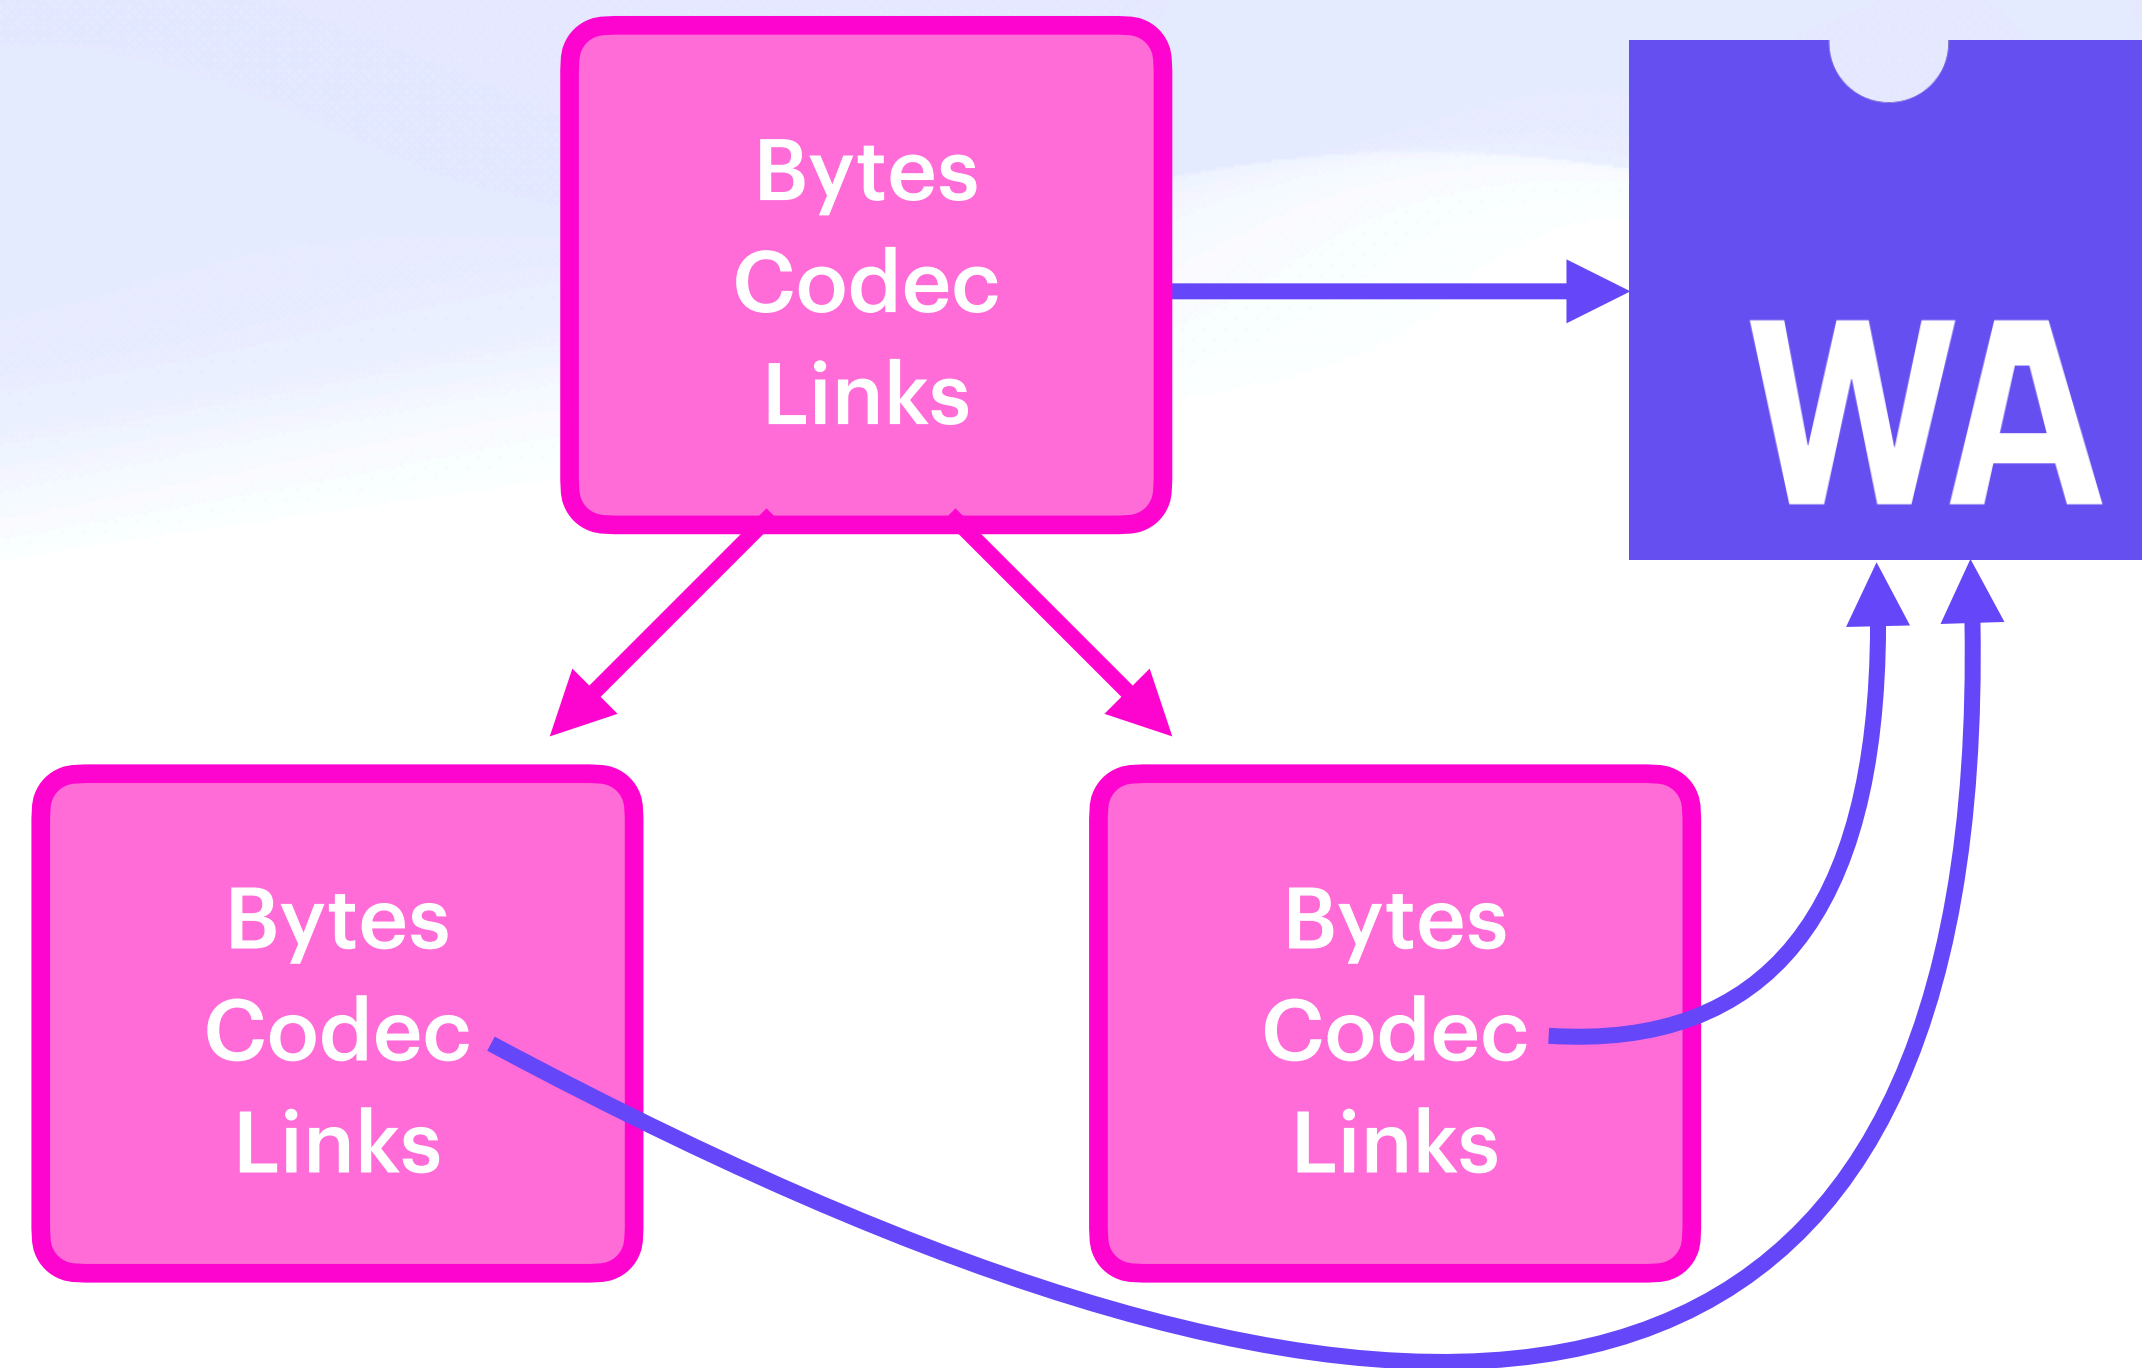

Direct Optional Field

Layout Options

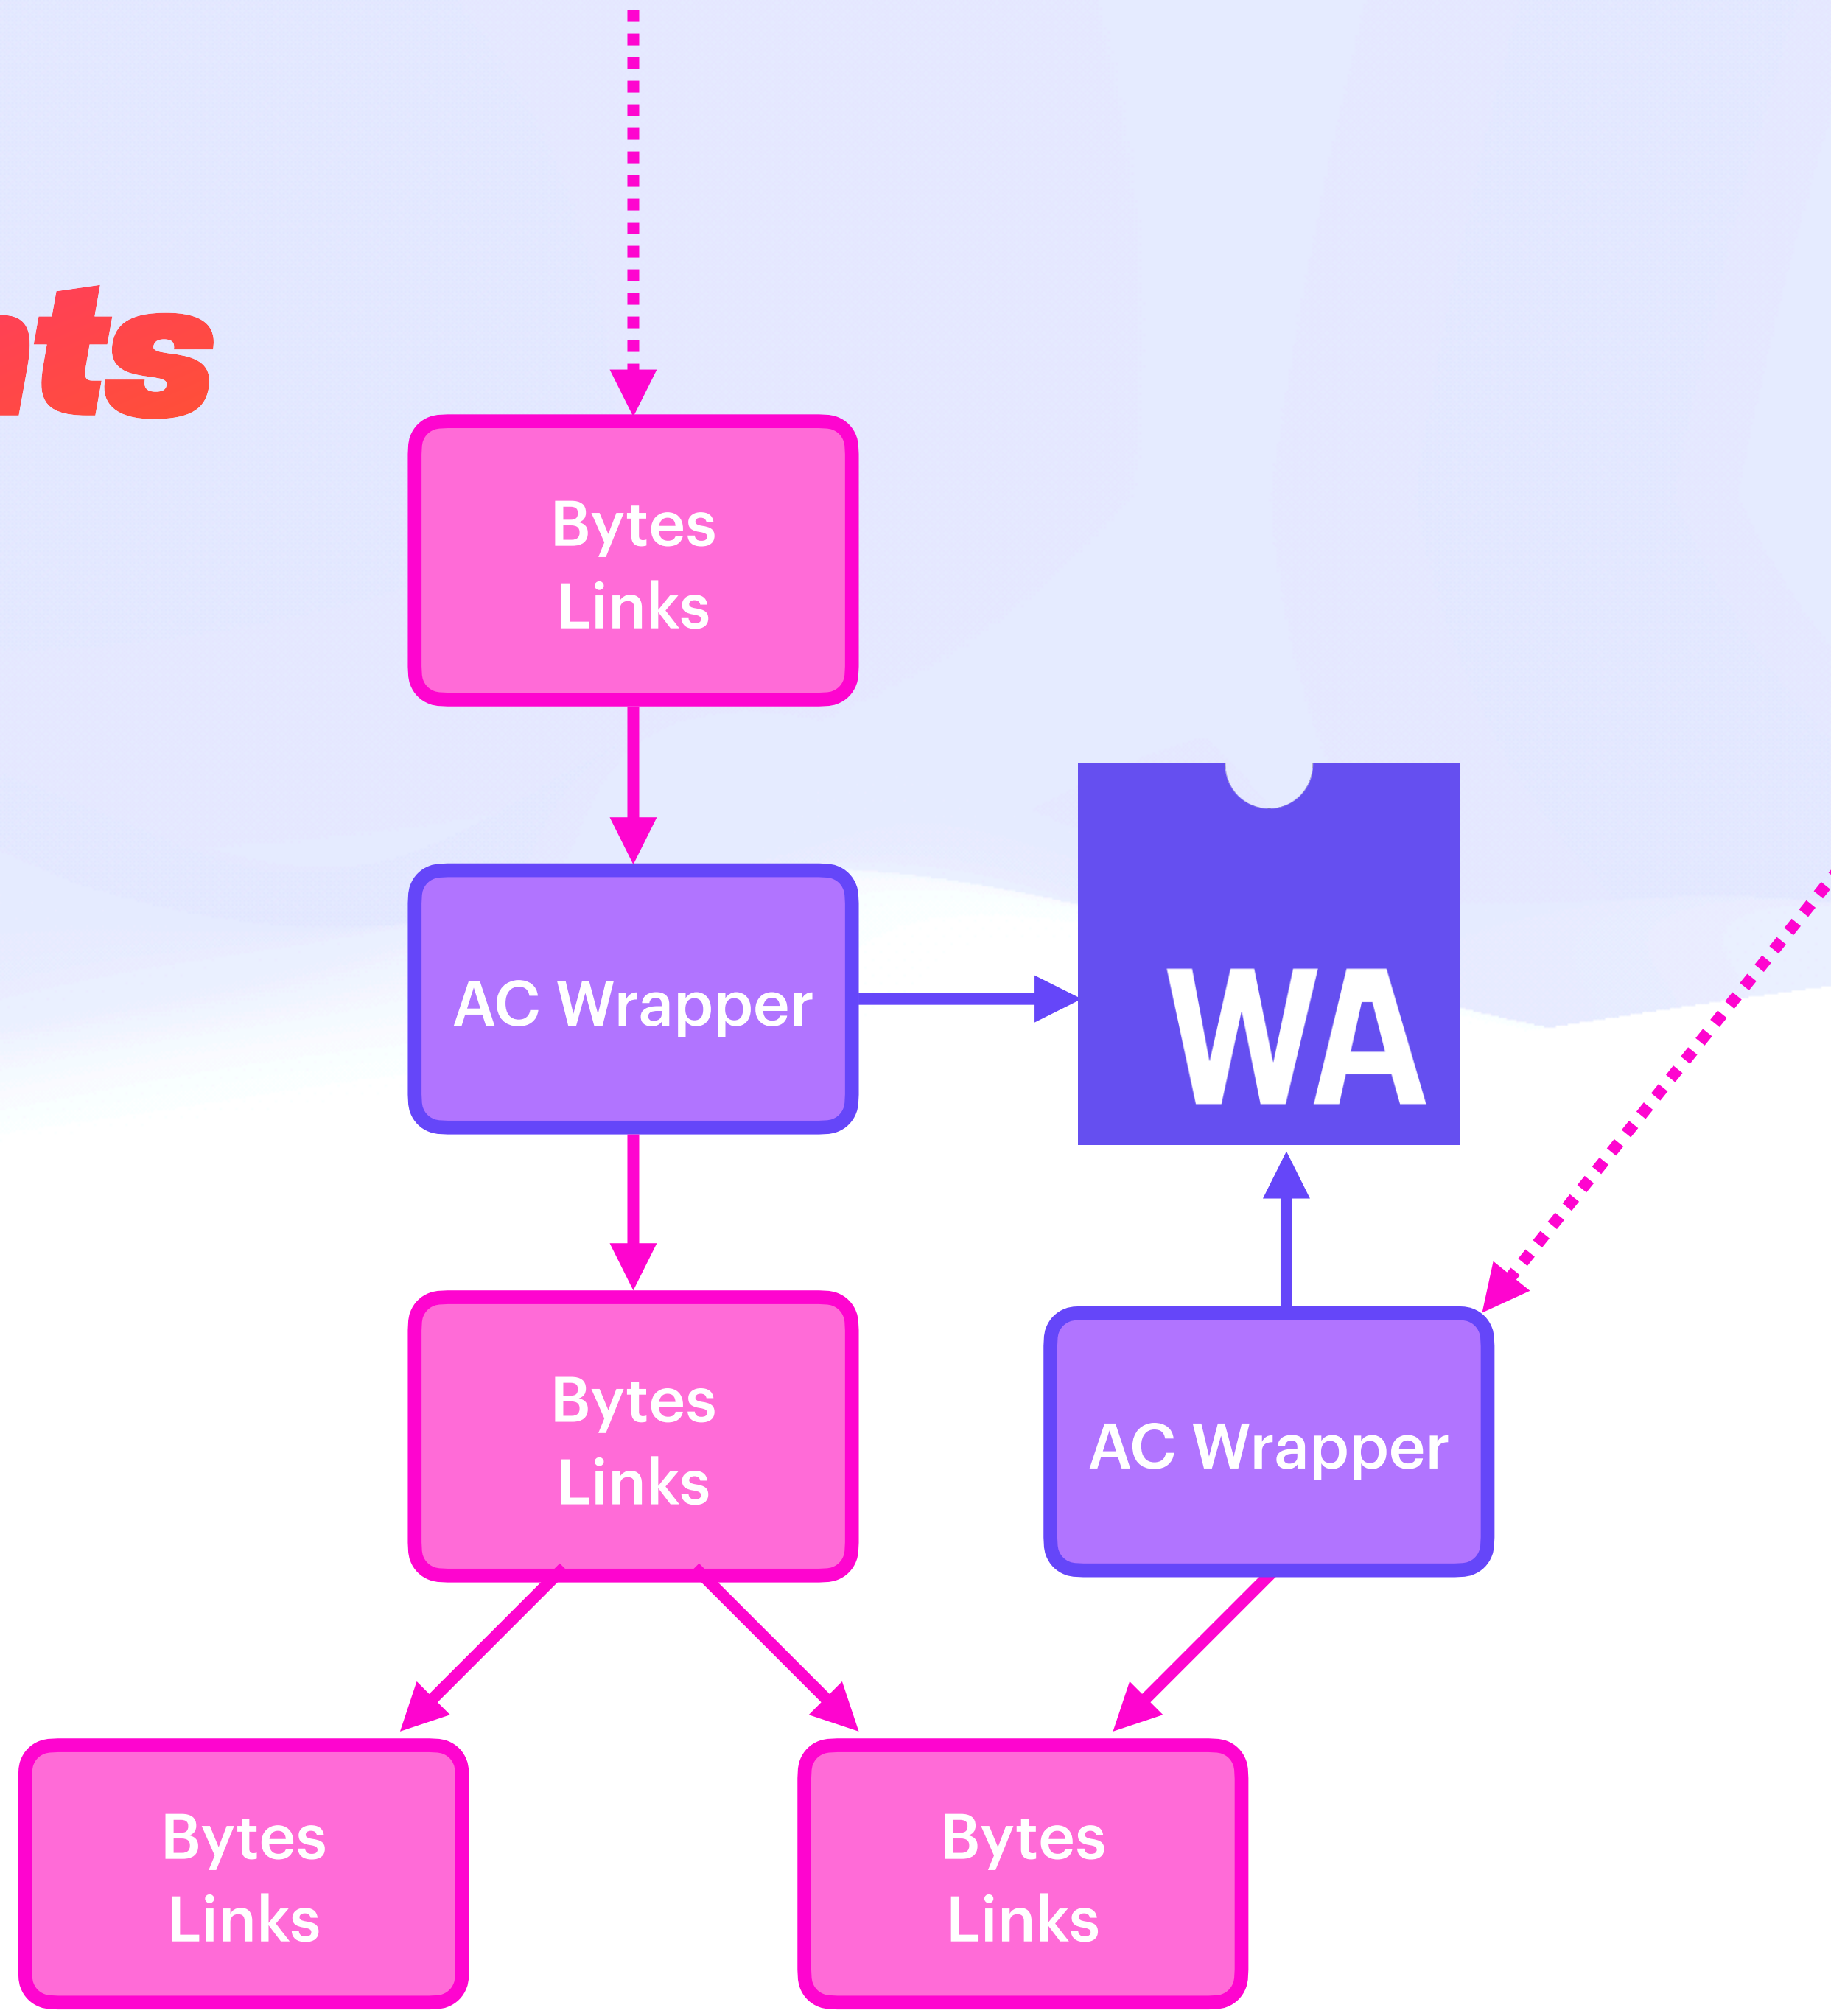

Direct Optional Field

- ◆ Compact (Bitswap friendly)
- ◆ Deep linking intact
- ◆ Redundancy (space)

Layout Options

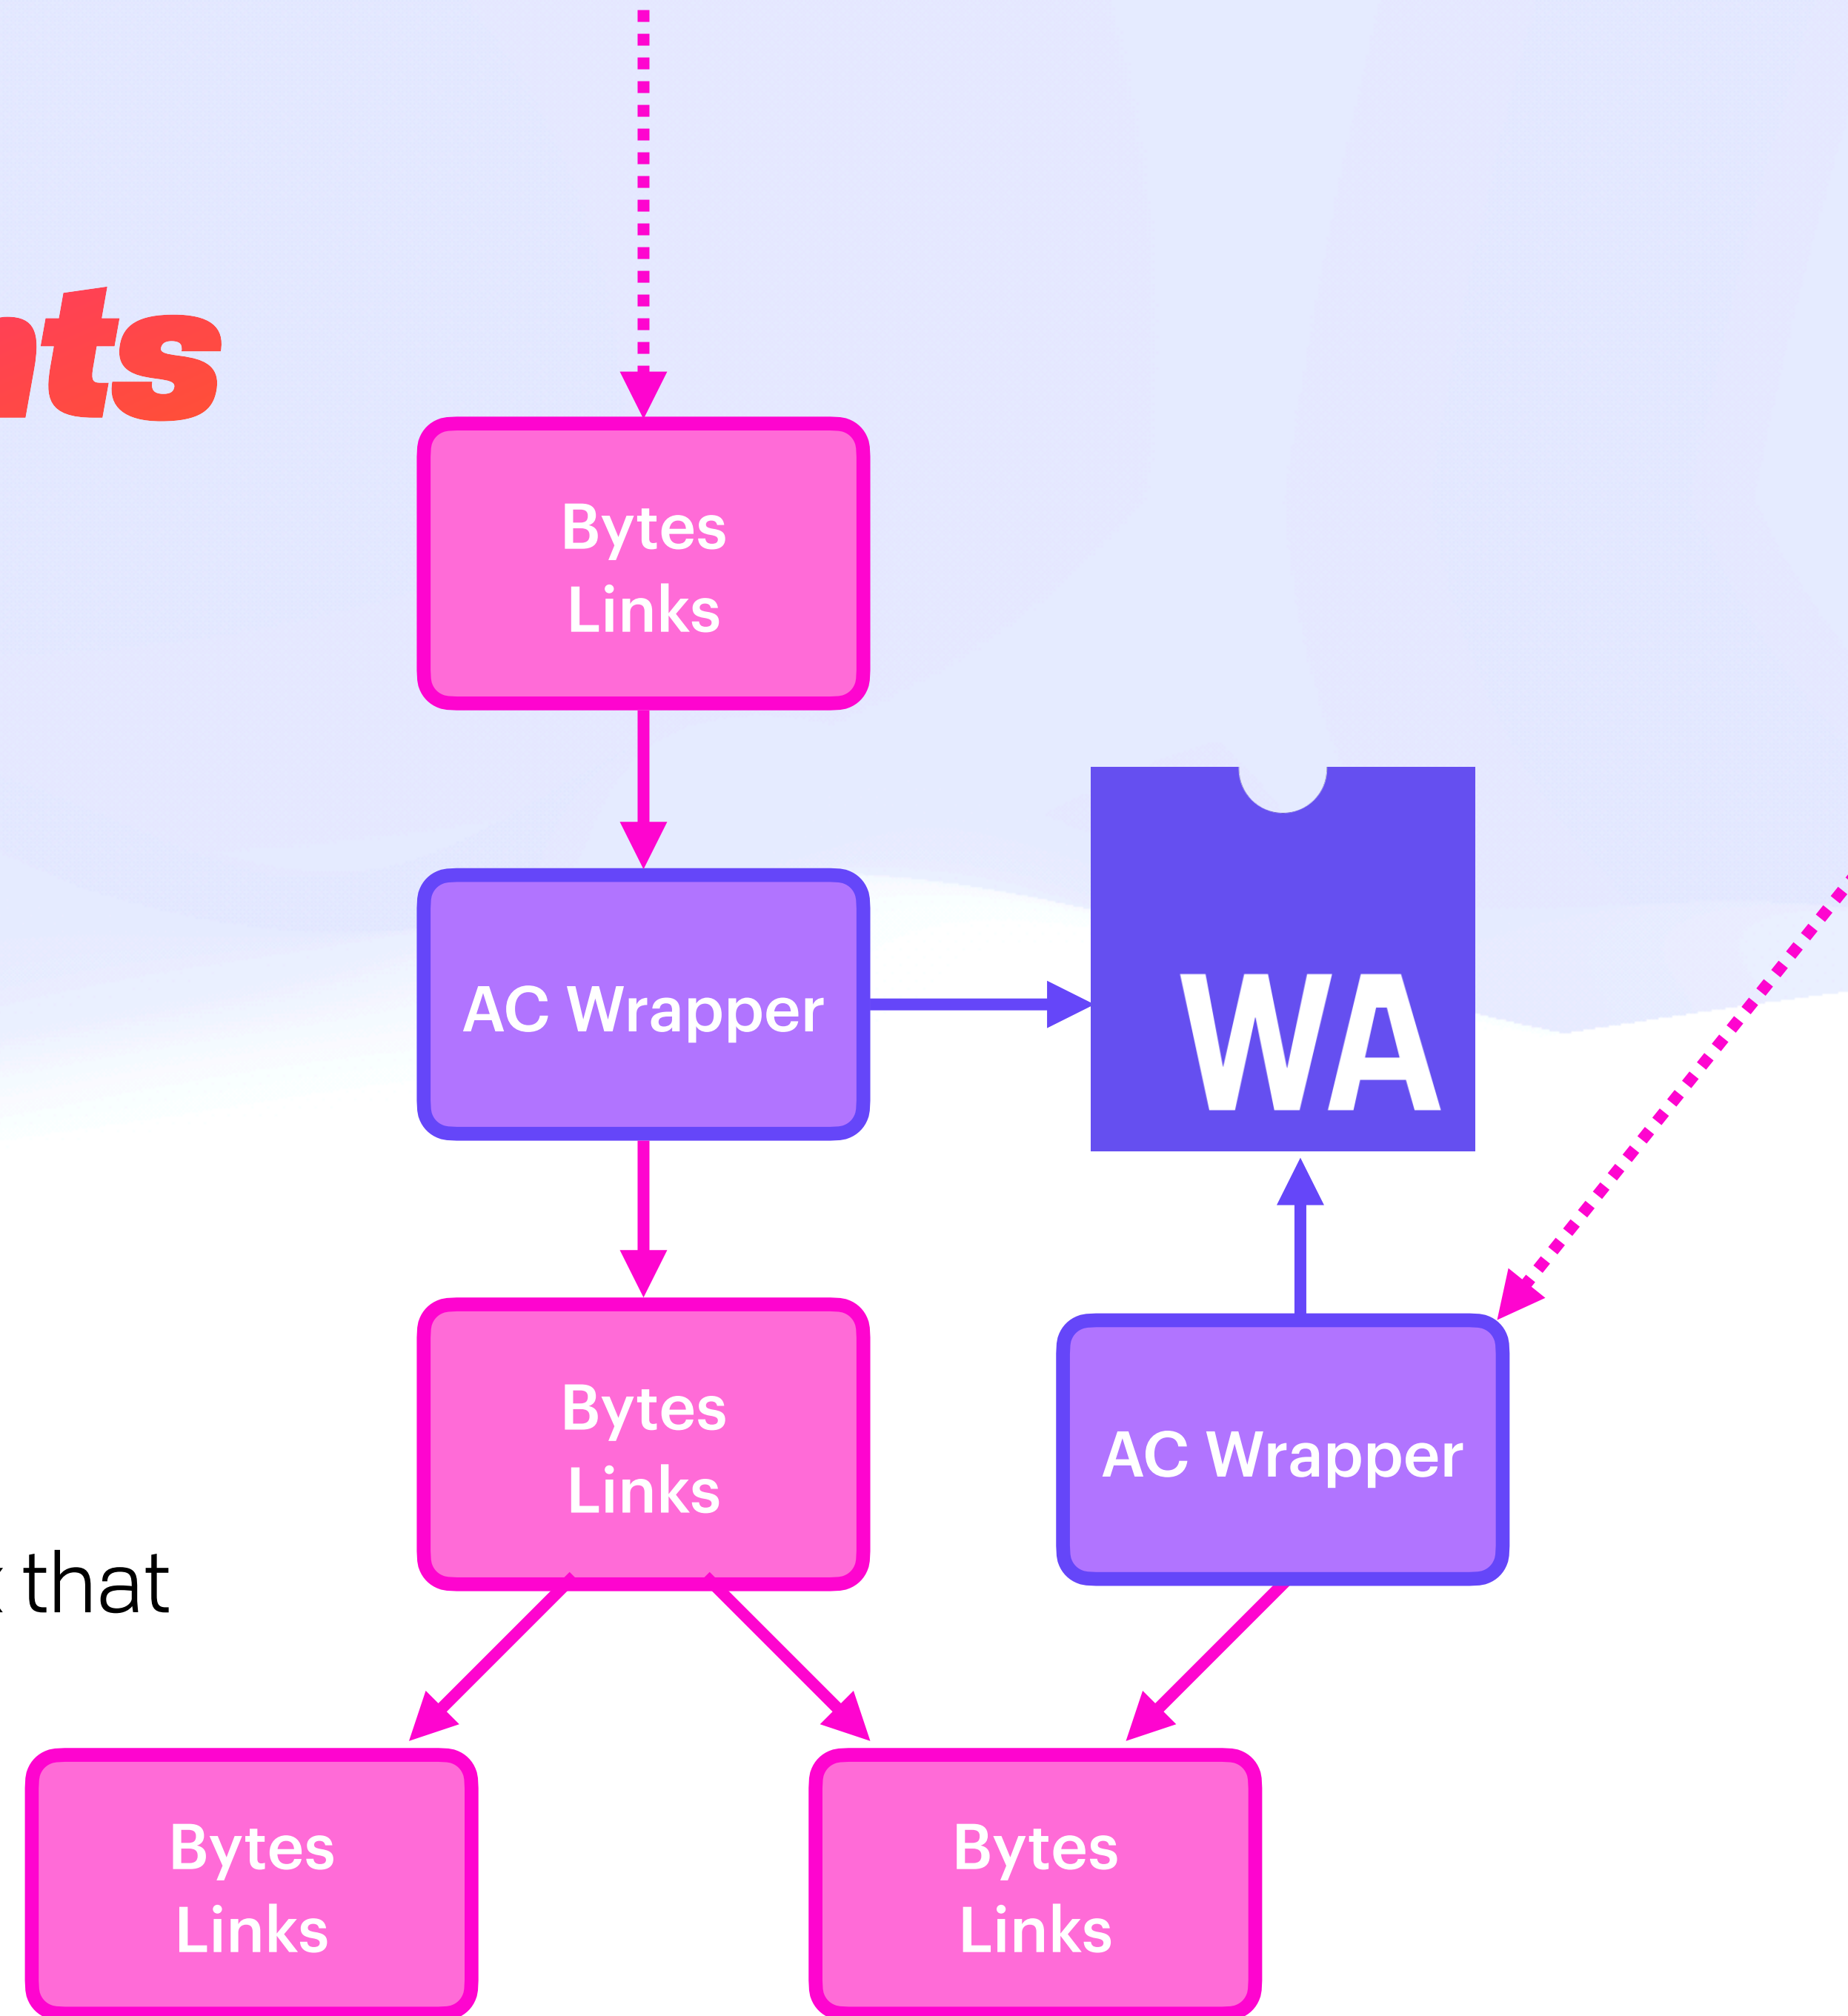

Wrap DAG Entry Points

Layout Options

Wrap DAG Entry Points

- ◆ More nodes (deeper graphs)
- ◆ Potentially Byzantine (stacked wrappers)
- ◆ Have to be careful to wrap all nodes
- ◆ Breaks all existing codecs... but the Wasm will fix that

Layout Options

Self-Describing

Layout Options

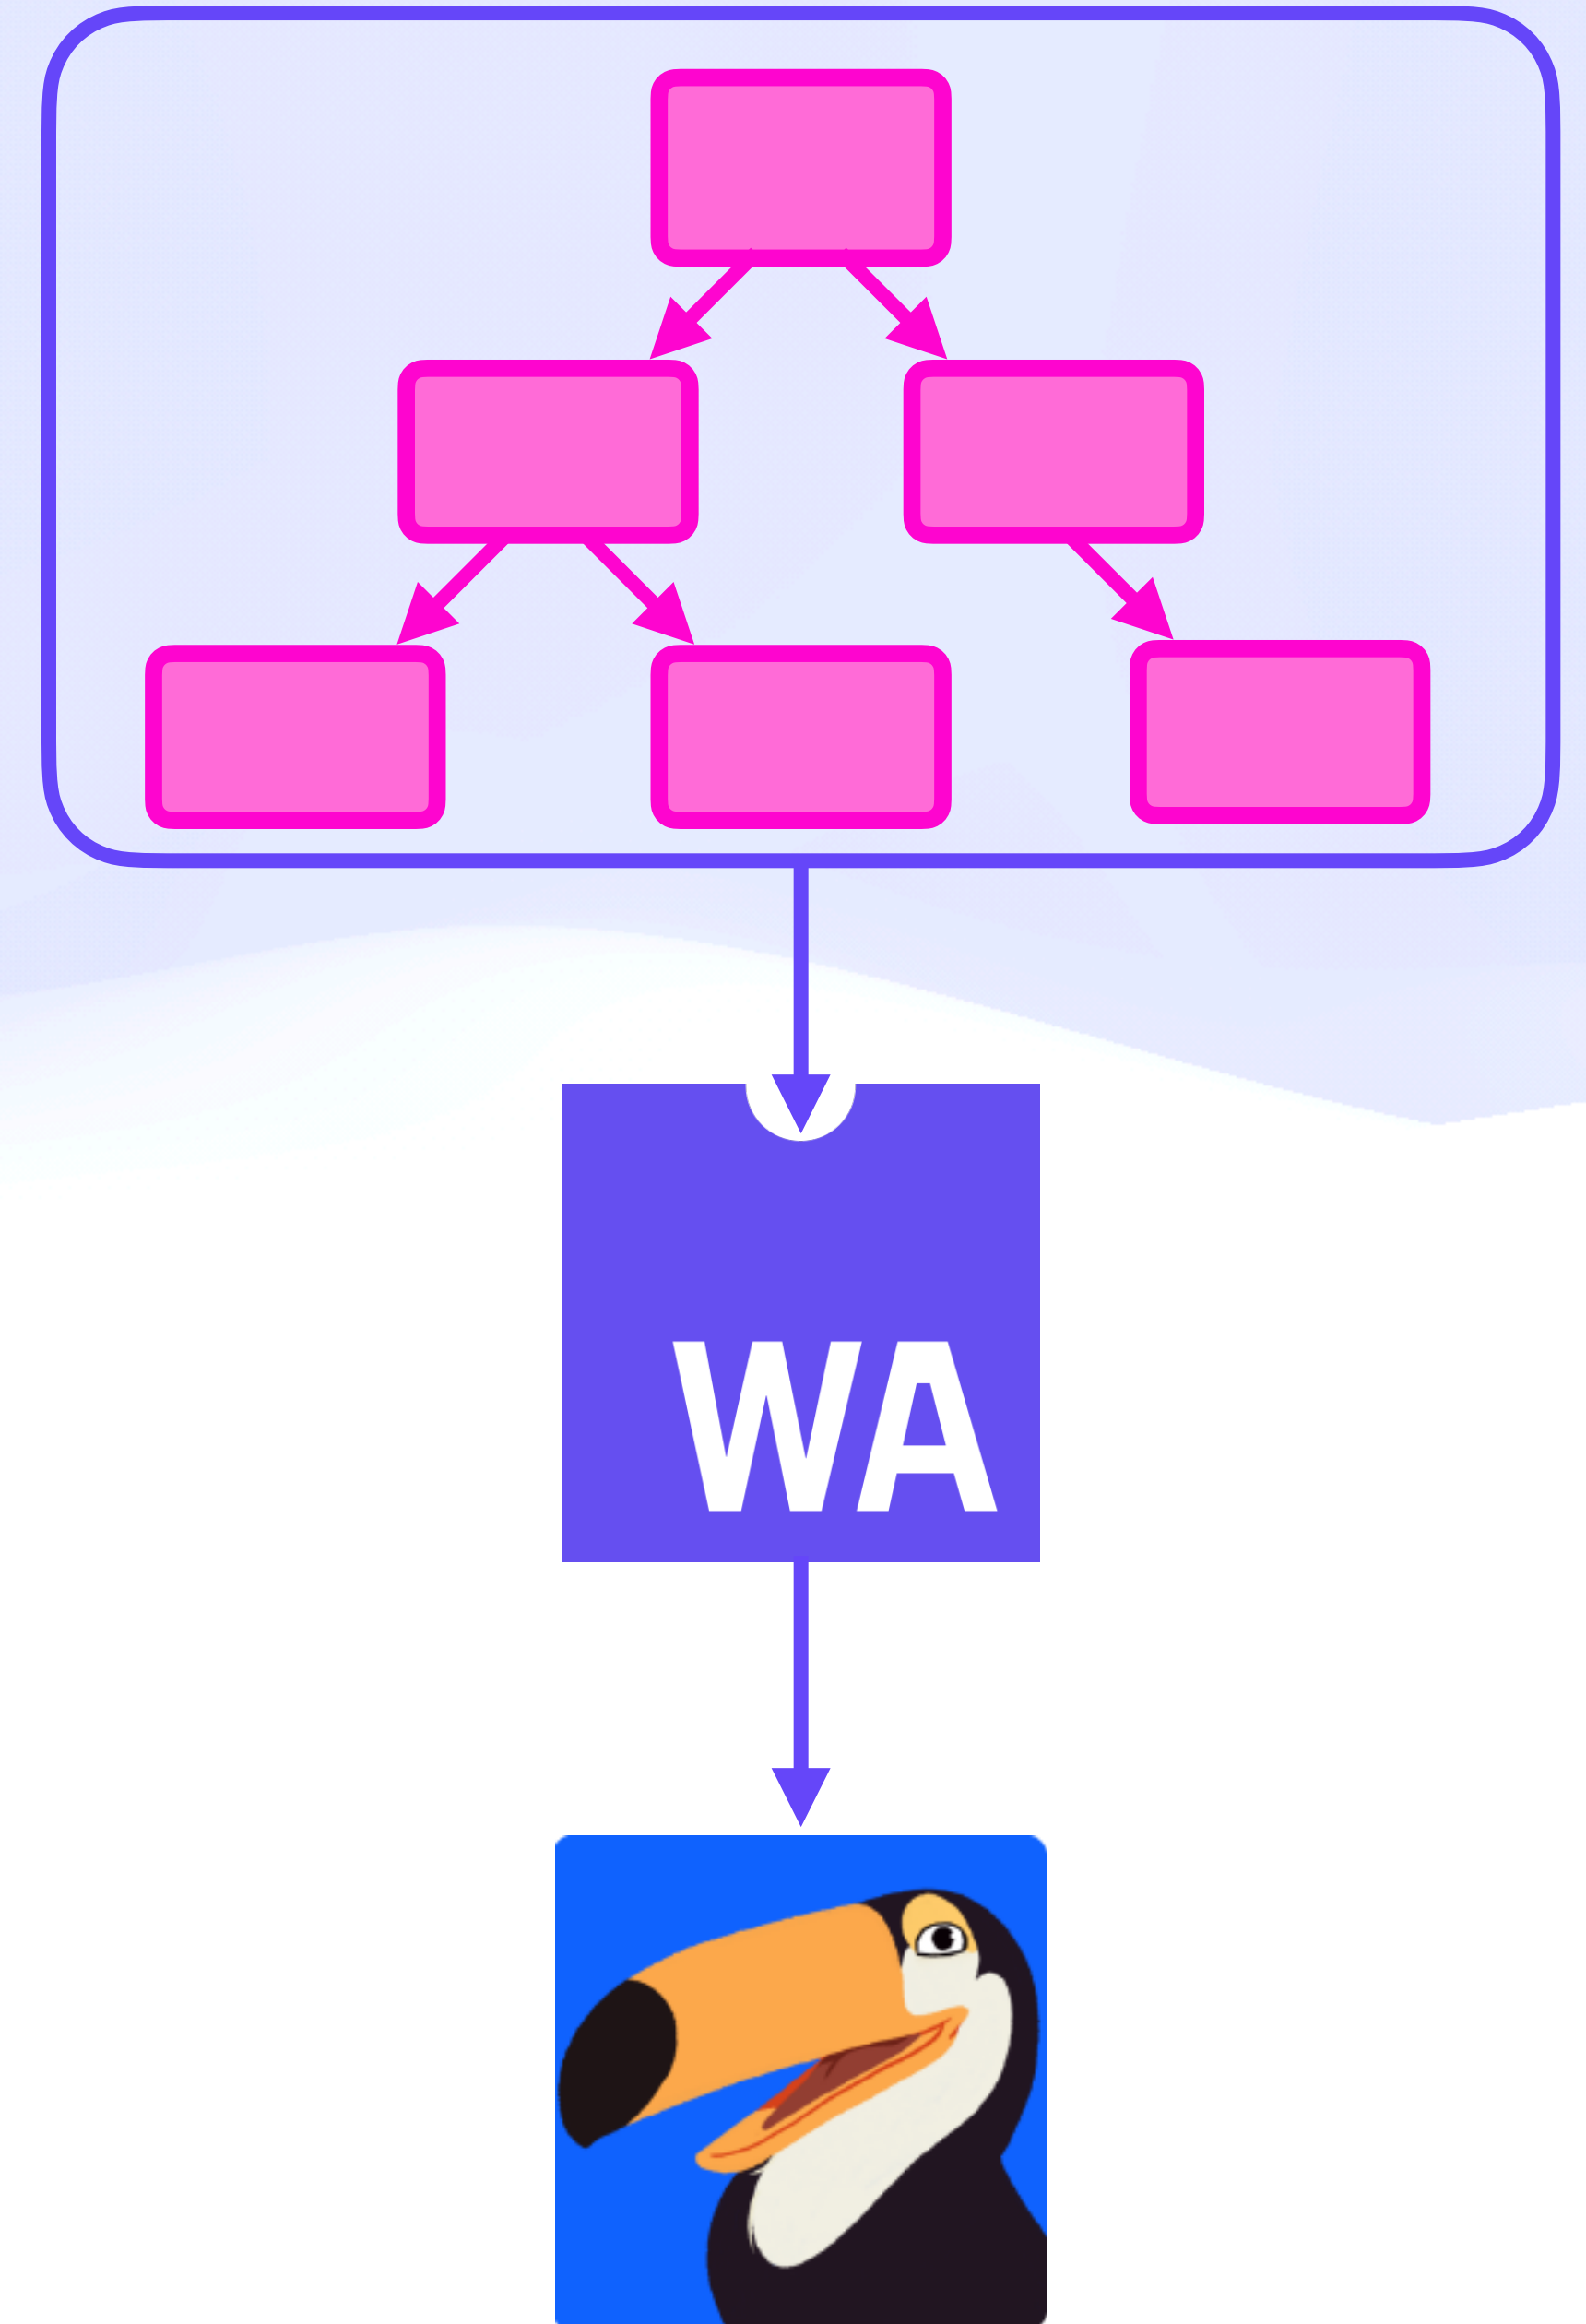

Self-Describing

- ♦ All interfaces via Wasm ABI
- ♦ MUST include raw IPLD decoder (e.g. from DAG-CBOR)
- ♦ MUST include one or more codecs, with a default
- ♦ MAY include transversal functions for output type

Layout Options

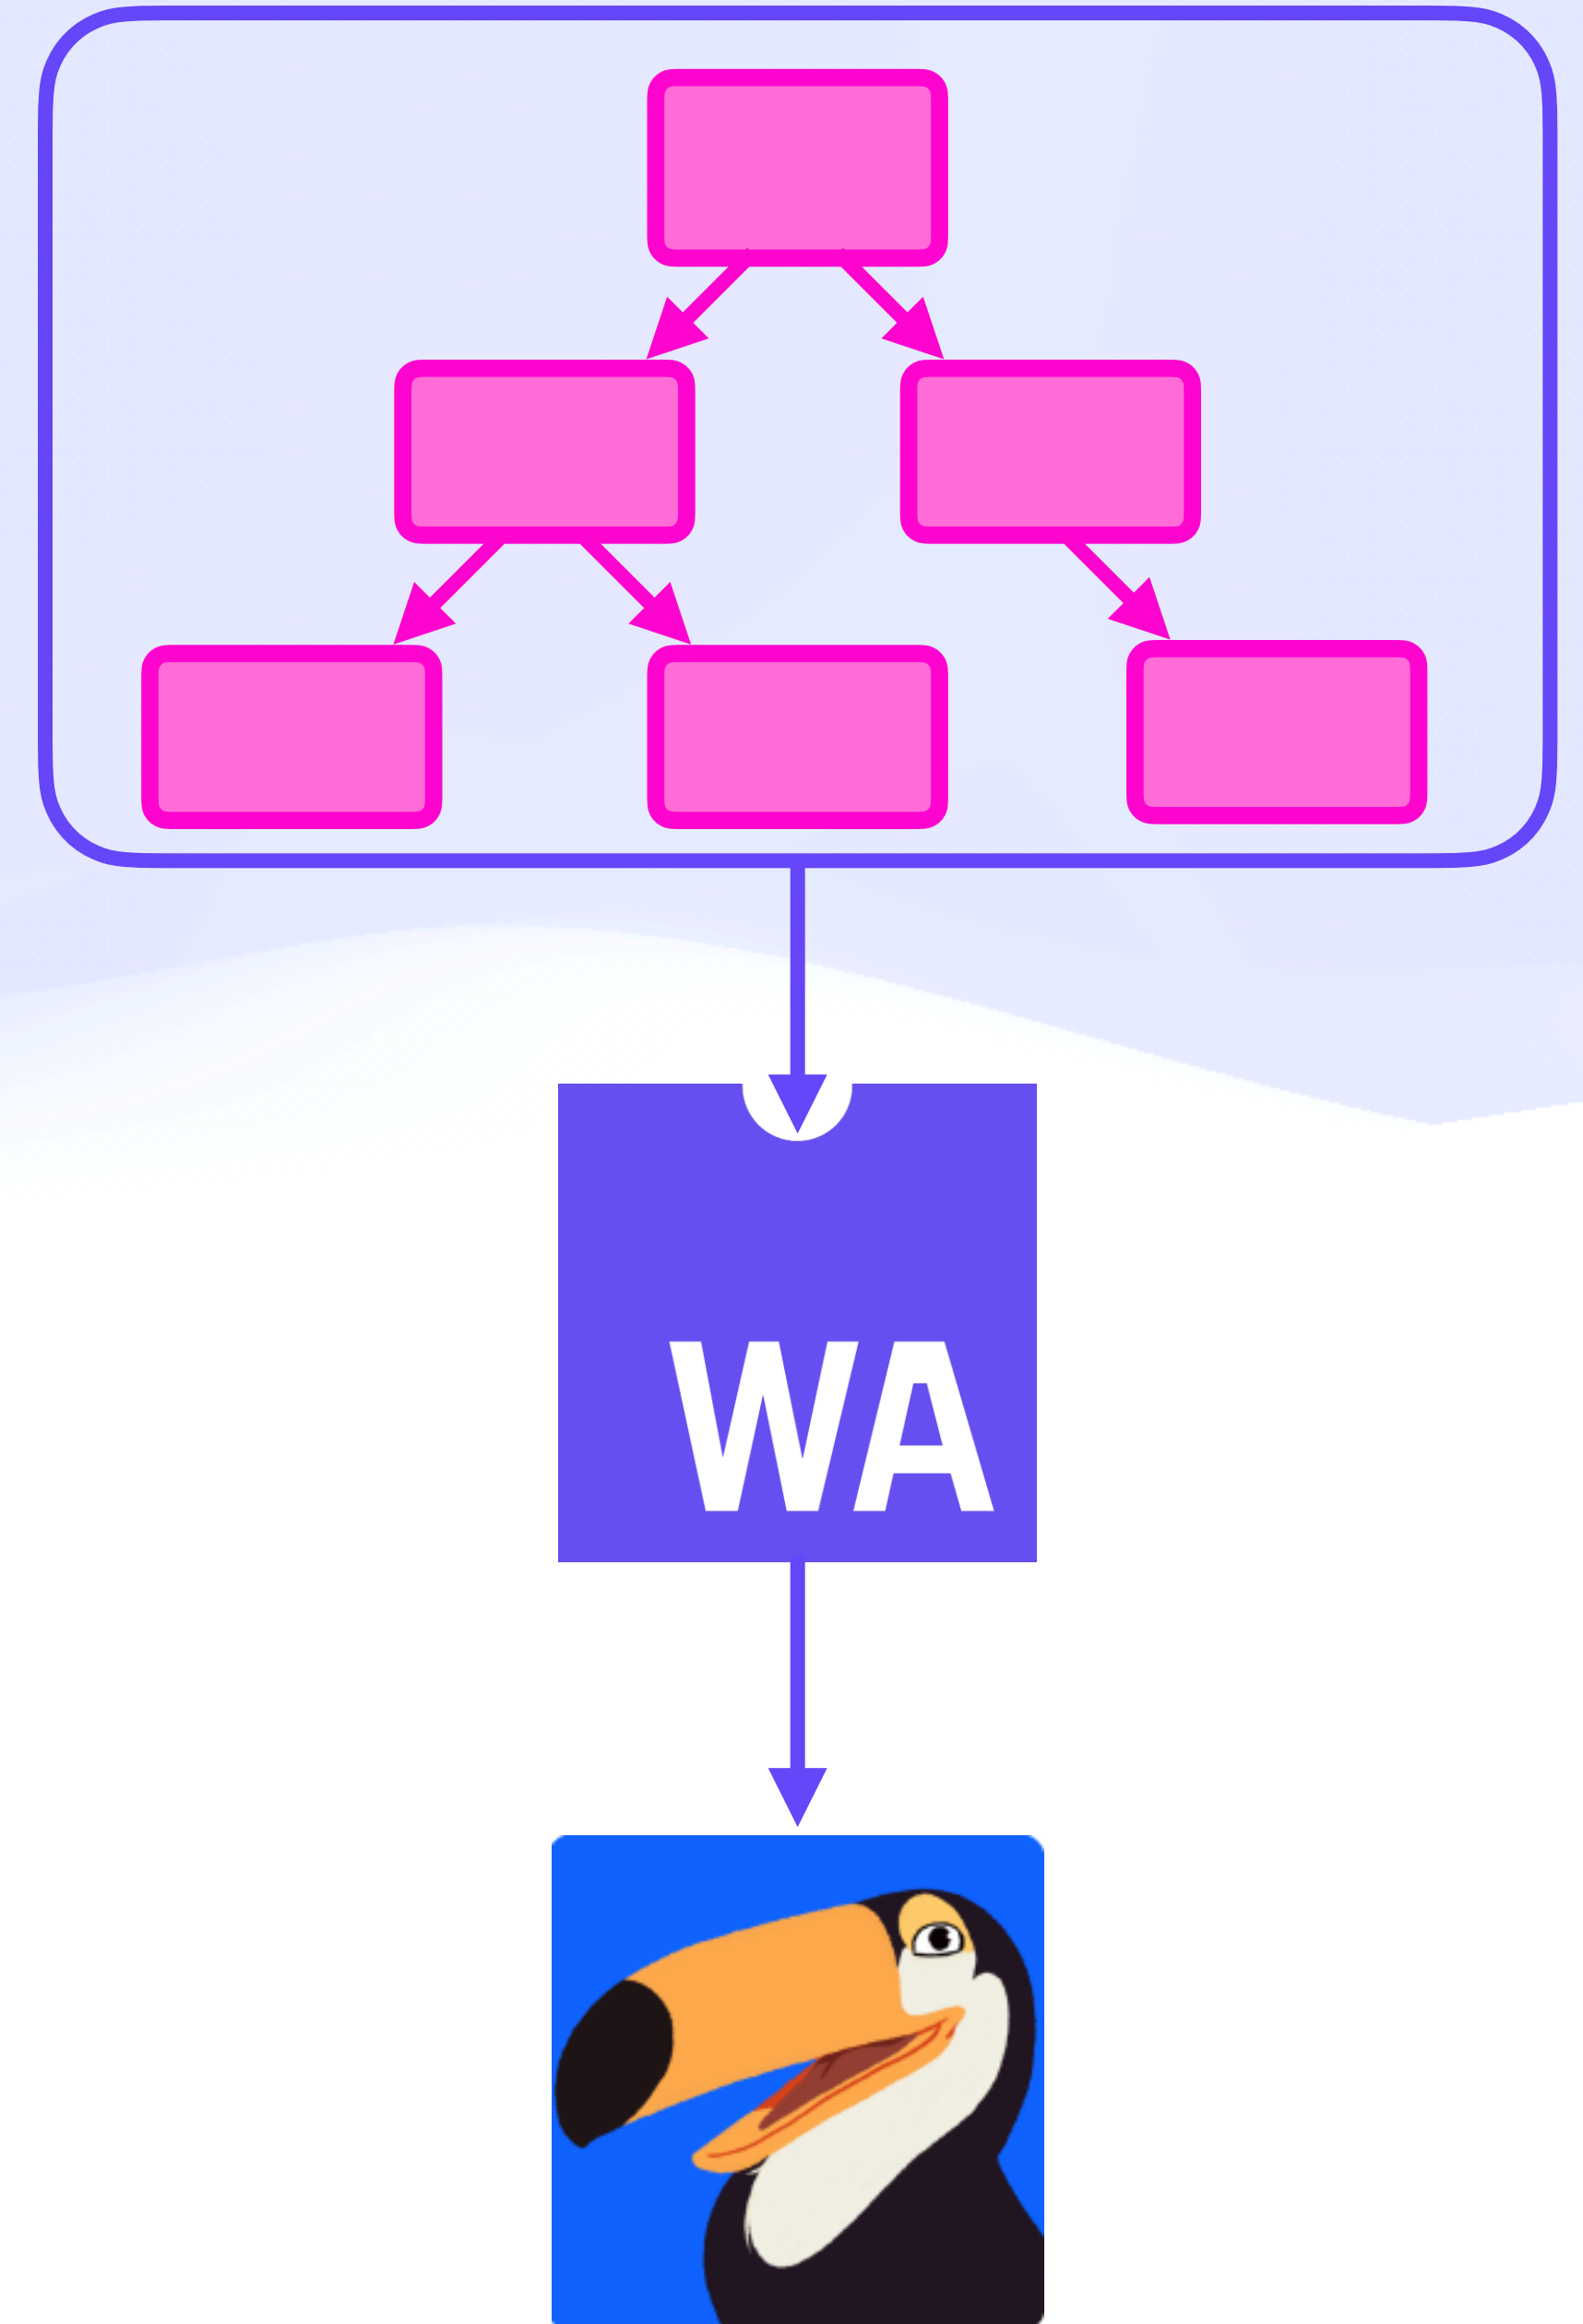

Execution & Bounding

Layout Options

Execution & Bounding

- ♦ MUST terminate
- ♦ Gas or timeout or AOT cost dynamics (probably gas)

Mutation

Who Encodes the Encoders?

Mutation

Adaptive Optimization

Mutation

Adaptive Optimization

- ♦ Either signalling method is "just" a tag
- ♦ Don't have to execute exactly this Wasm blob

Mutation

Adaptive Optimization

- ◆ Either signalling method is "just" a tag
- ◆ Don't have to execute exactly this Wasm blob

Mutation

Adaptive Optimization

- ♦ Either signalling method is "just" a tag
- ♦ Don't have to execute exactly this Wasm blob

Mutation

In Place Upgrades & Fixes

- ♦ ...why?
 - ♦ Deterministic codec: check it
 - ♦ Wrong layer: just replace 🙅
- ♦ If you REALLY want to...
 - ♦ Convention (detect and replace)
 - ♦ Back to AOT loading
 - ♦ Discourages updates 👍+👎
 - ♦ Mutable pointer (e.g. IPNS)
 - ♦ How often to check? Malicious updates?
