agenda

1. Preamble
2. Debugging

Professionalism

*"Professionalism is a loaded term. Certainly it is a badge of honor and pride, but it is also a marker of **responsibility and accountability**. The two go hand in hand, of course. You can't **take pride and honor** in something that you can't be held accountable for"*

Uncle bob - The clean coder

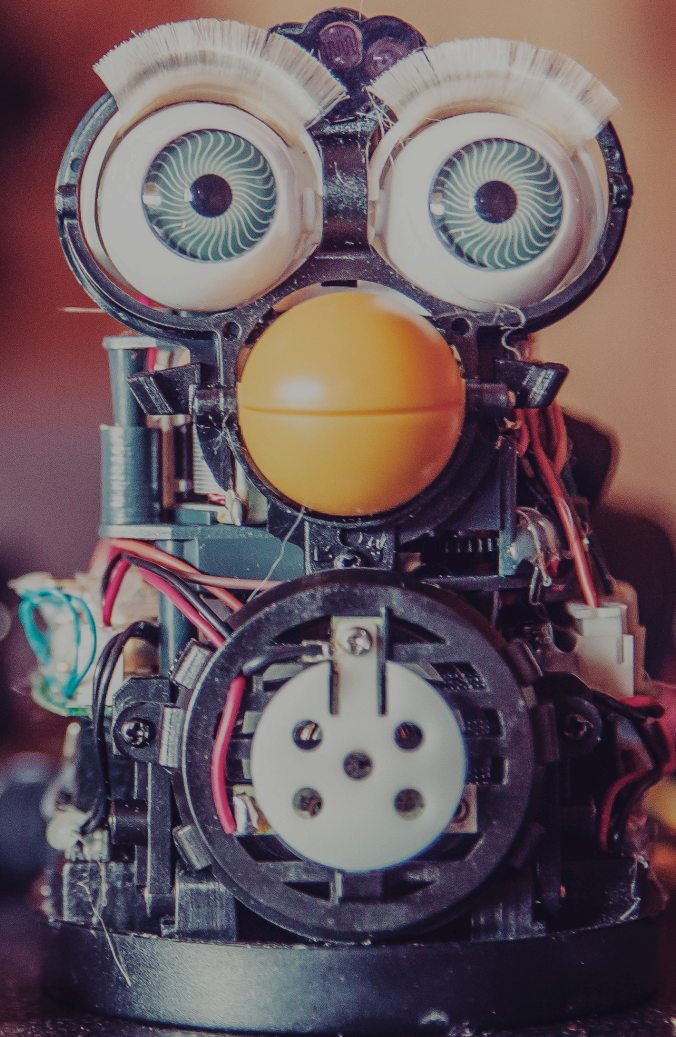

Do not harm

What is a bug?

Debugging
IS part of your
programming
time

We need to
prevent bugs
from happening

Yes, but How?

Master software principles

Am I done?

And because

Err is Human

A person in a black gorilla costume stands on the left, facing right. A person in a yellow banana costume stands on the right, facing left. They are positioned against a background of purple and blue with some white scratches. The gorilla costume is very fluffy and has a realistic face. The banana costume is a simple, bright yellow shape with a hole for an arm.

Get better at debugging

Have a meta model

Goal: Identify the problem

- 1 - Identify and understand the symptoms
- 2 - Isolate the bug
- 3 - Track down the symptoms to the root problem

Let's dig in

thank you
