

# ON CALL FOR DEVELOPERS

 @papa\_fire

# HELLO

**MY NAME IS LEON**

and I am a developer

```
user:/$~ sudo -s
```

```
bash: Permission denied  
user is not in the sudoers file.  
This incident will be reported.
```

F&\*# YEAH!

```
user:/$~ sudo -s
```

```
root:/#~
```

**WITH GREAT POWER  
COMES GREAT RESPONSIBILITY**

(and more work)

Should  
Developers  
Be  
On Call?

Things  
that can  
go wrong

*Little..*

**SAY NO TO  
UNDOCUMENTED  
ALERTS**

# DEEP INSTRUMENTATION

top-down approach

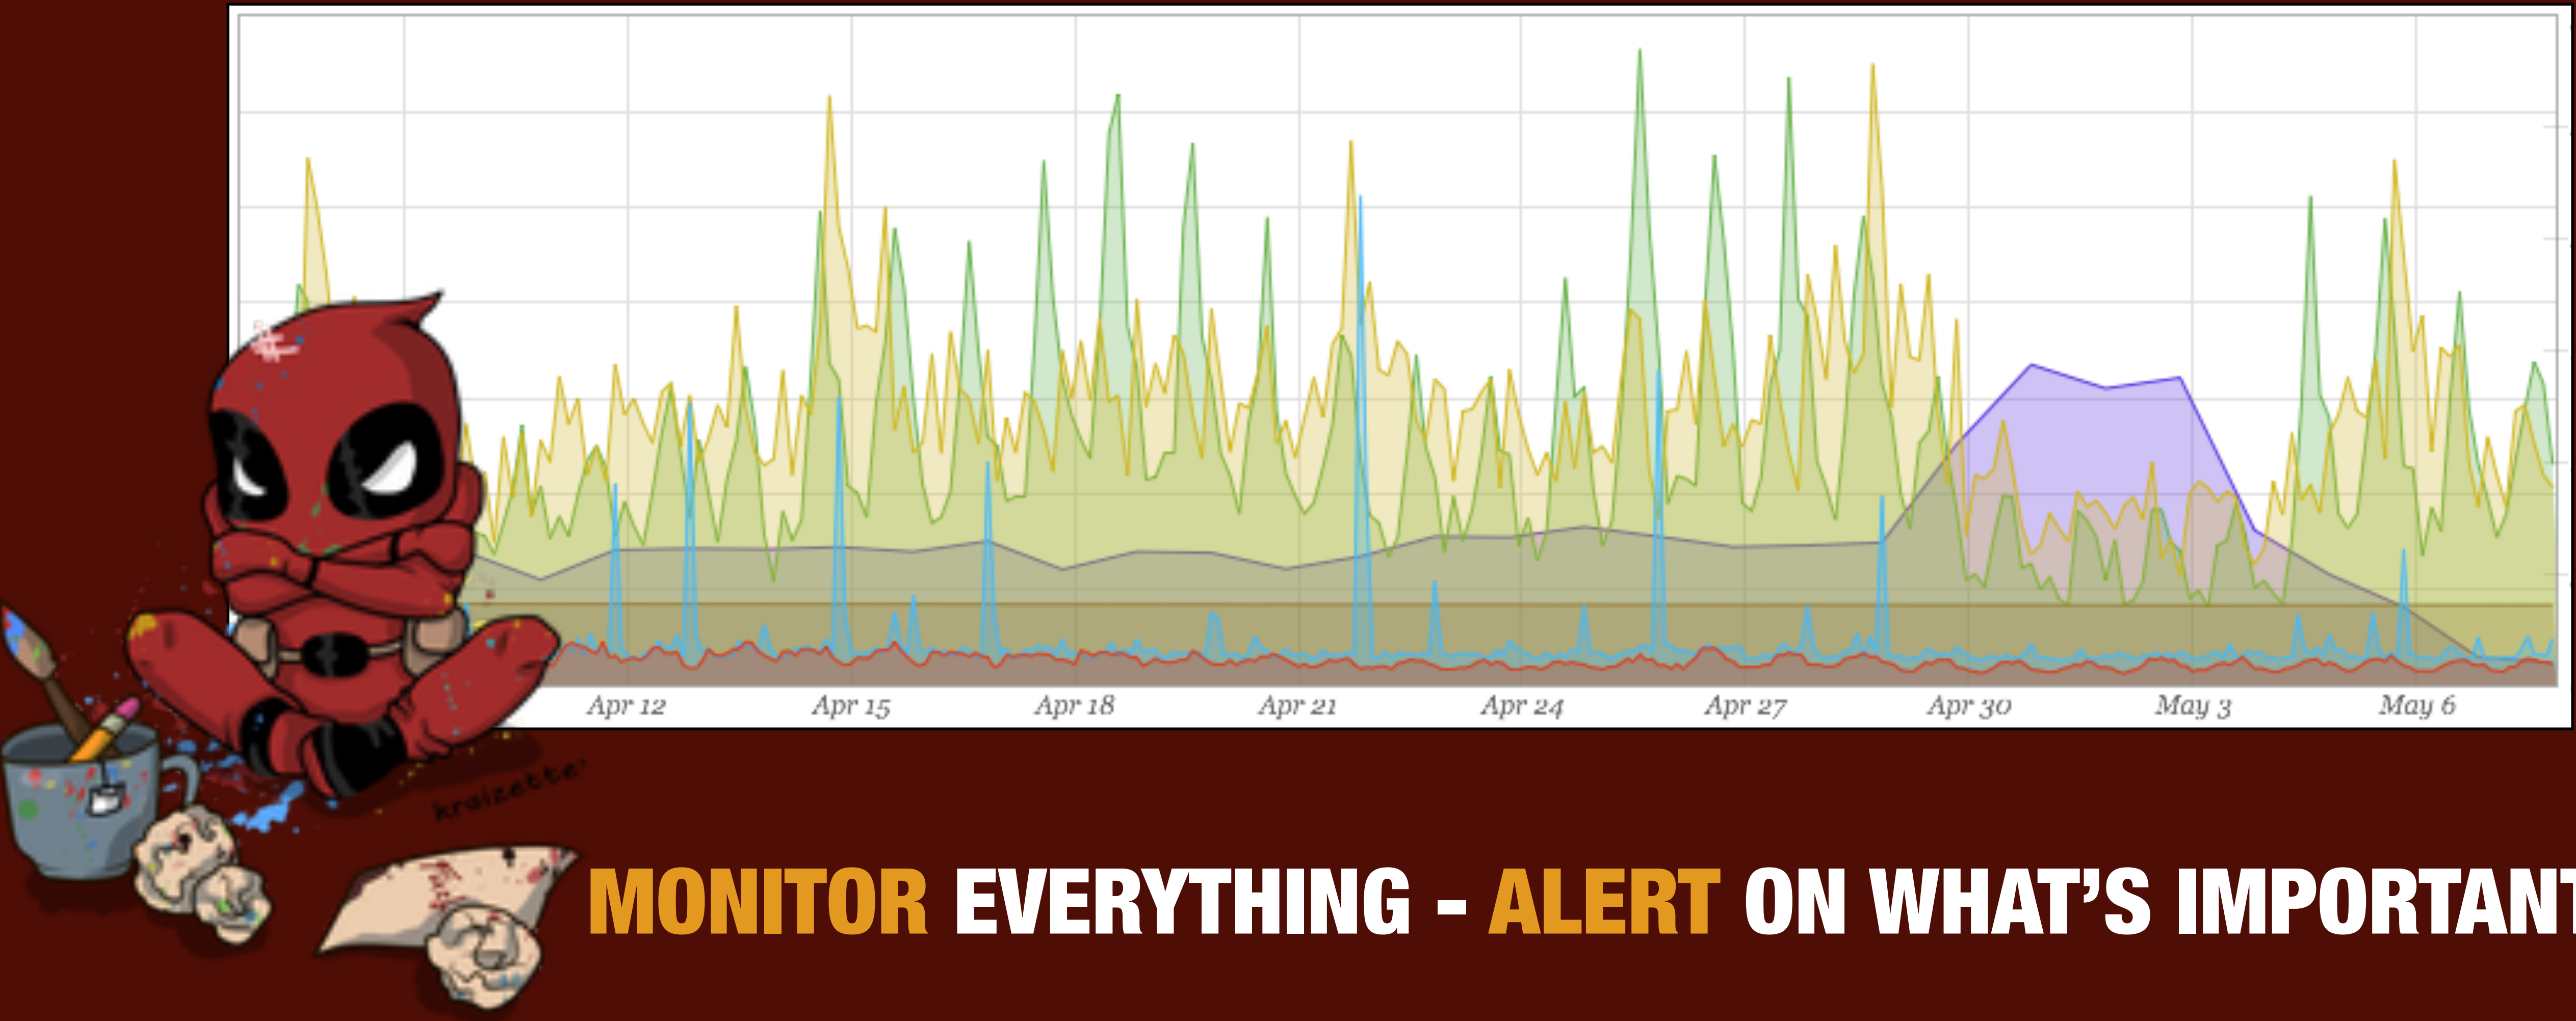

- 1 understand business
- 2 monitor business
- 3 correlate data

network latency  
conversions  
database load

CPU load  
cache hit ratio  
API responsiveness

revenue  
email bounce rate  
performance

# CONSTANT INSTRUMENTATION

monitoring  
is **NOT**  
a feature

# CONTINUOUS IMPROVEMENT
