Management tasks

Provisioning, managing scaling and patching of servers

#### Lego uses an event-driven design

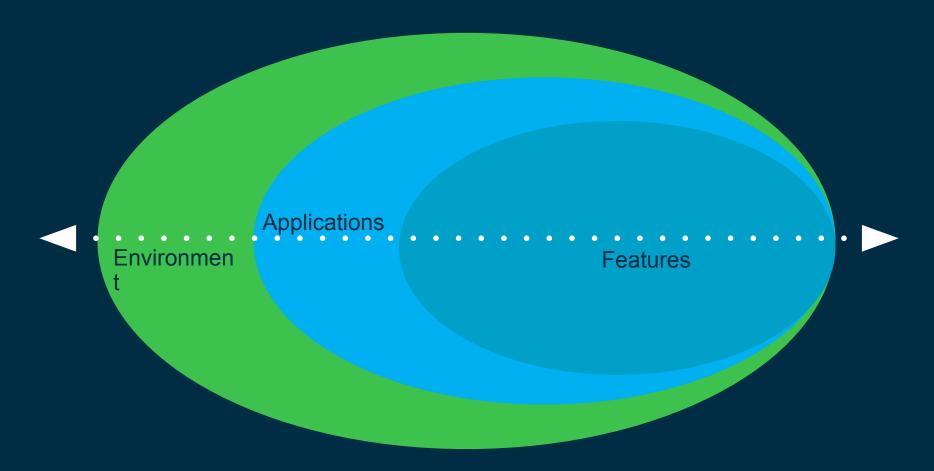

#### Purpose-built databases at AWS

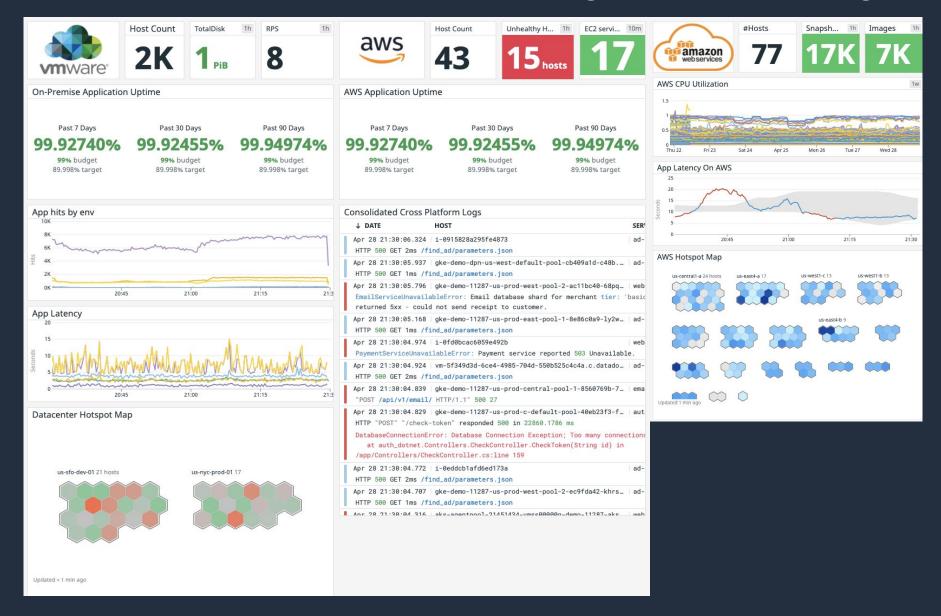

### Risk of introducing changes

...may result in unavailability, reduced performance, adoption

#### Monitor for reliable service health during re-platforming

## Observability

## Review from ep1: Observability

## Four Golden Signals

## **Four Golden Signals**

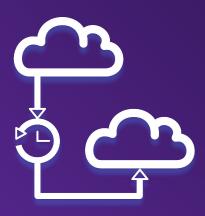

Latency

Traffic

**Errors** 

**Saturation** 

### Four Golden Signals: Latency

- Direct impact on customer experience.
- Where and how you measure is key.

### Four Golden Signals: Traffic

- The amount of work being done—or attempted.
- Direct relationship to business value.

### Four Golden Signals: Errors

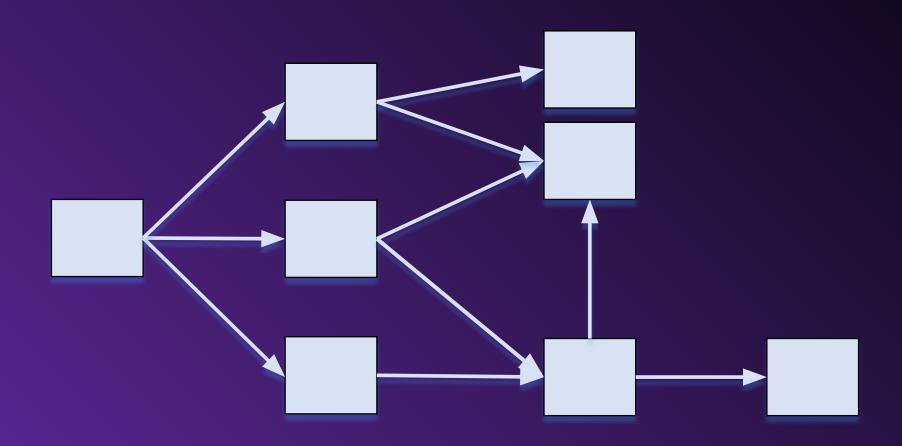

- A nice, defined target to aim at.
- Direct impact on customer experience.

### Four Golden Signals: Saturation

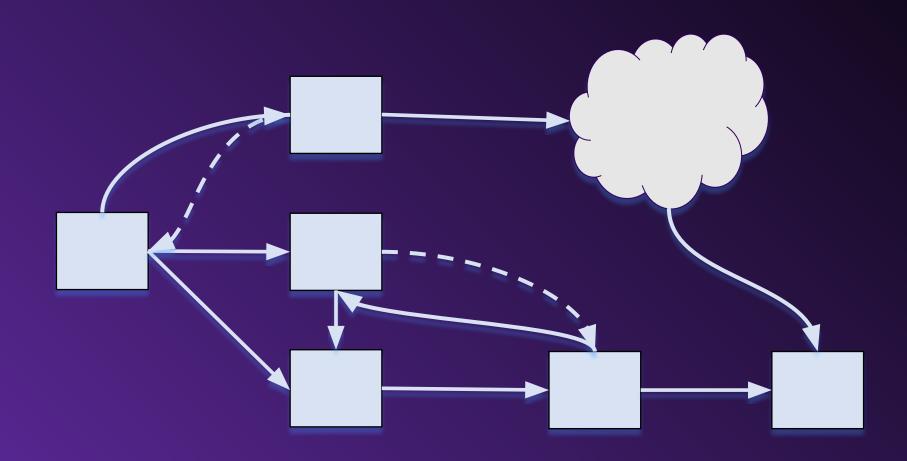

- Honestly, this is a tricky one. :)
- Direct relationship to both scaling and capacity planning.

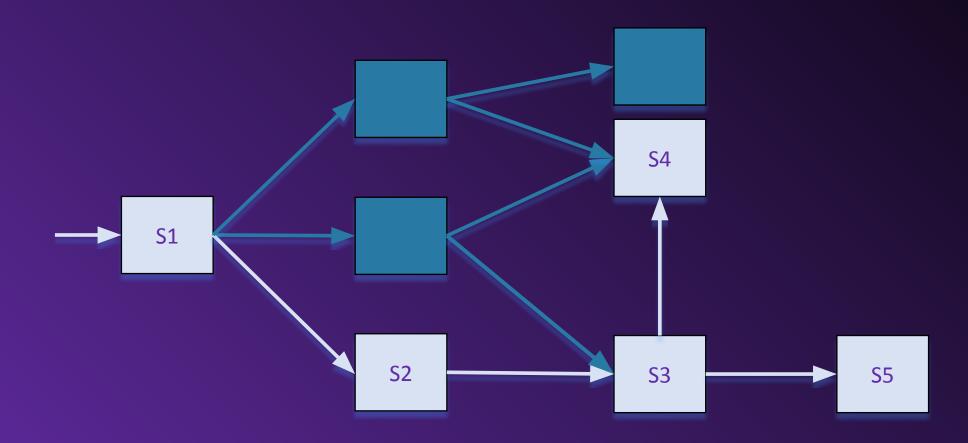

## Traces and APM

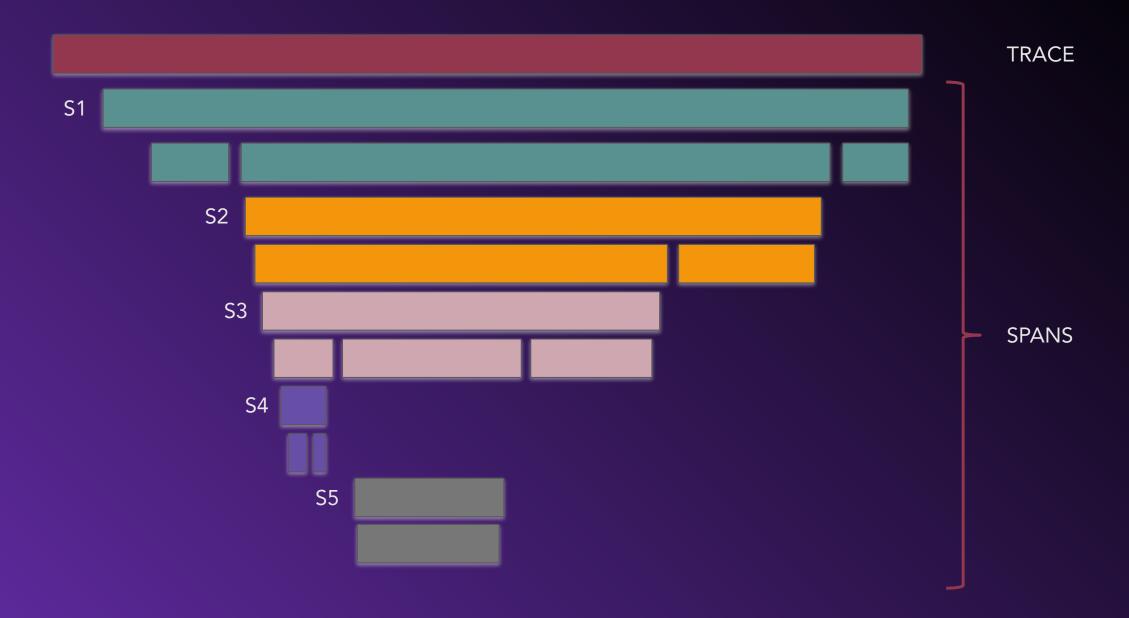

## Demo
