Web Developers were like:

What?

I'm sorry, what?

“This was a purposeful change due to rampant ‘list’-itis by web developers.”

– James Craig, Apple, bugs.webkit.org

What? No, hang on a sec!

“What does it mean for me, as a web developer, that Safari is not reading lists, when they don’t look like a list?”

– John Doe-developer

Nothing.

A Time Line

- 2014: First Commit
- 2015: Additional Code
- ...
- 2019: The Web Notices

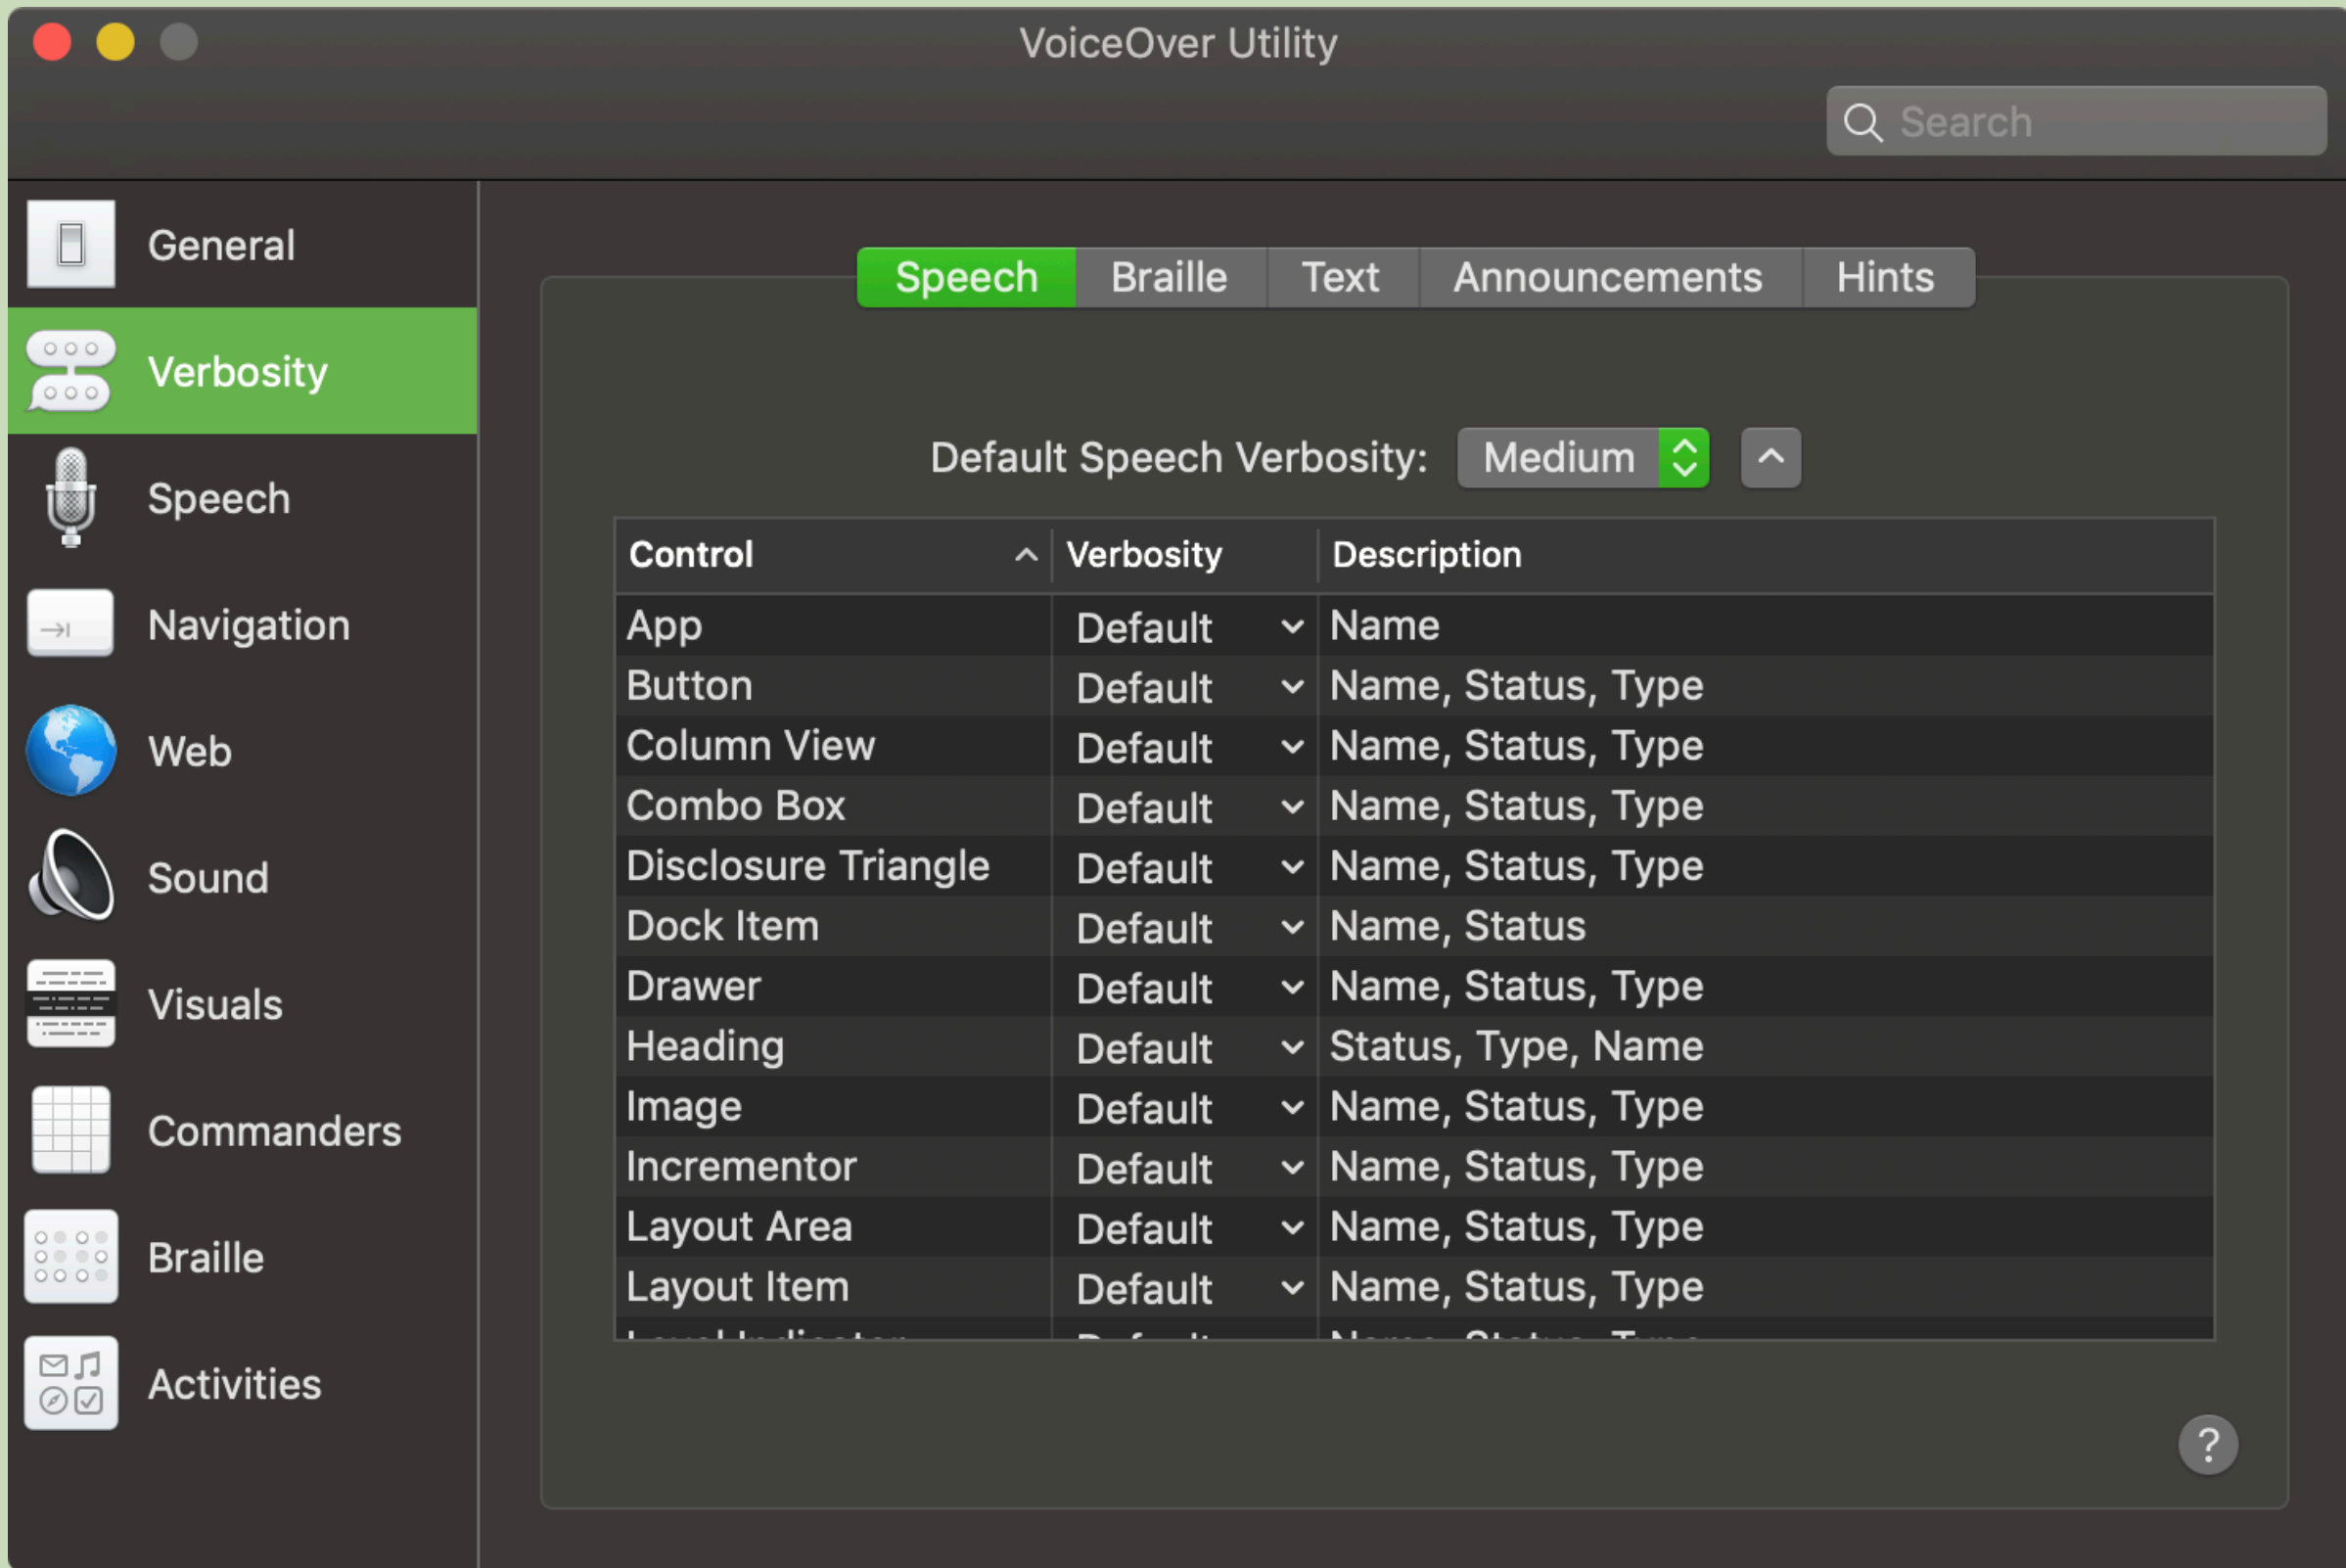

“Customers seem much happier in the 3 years since this change went in.”

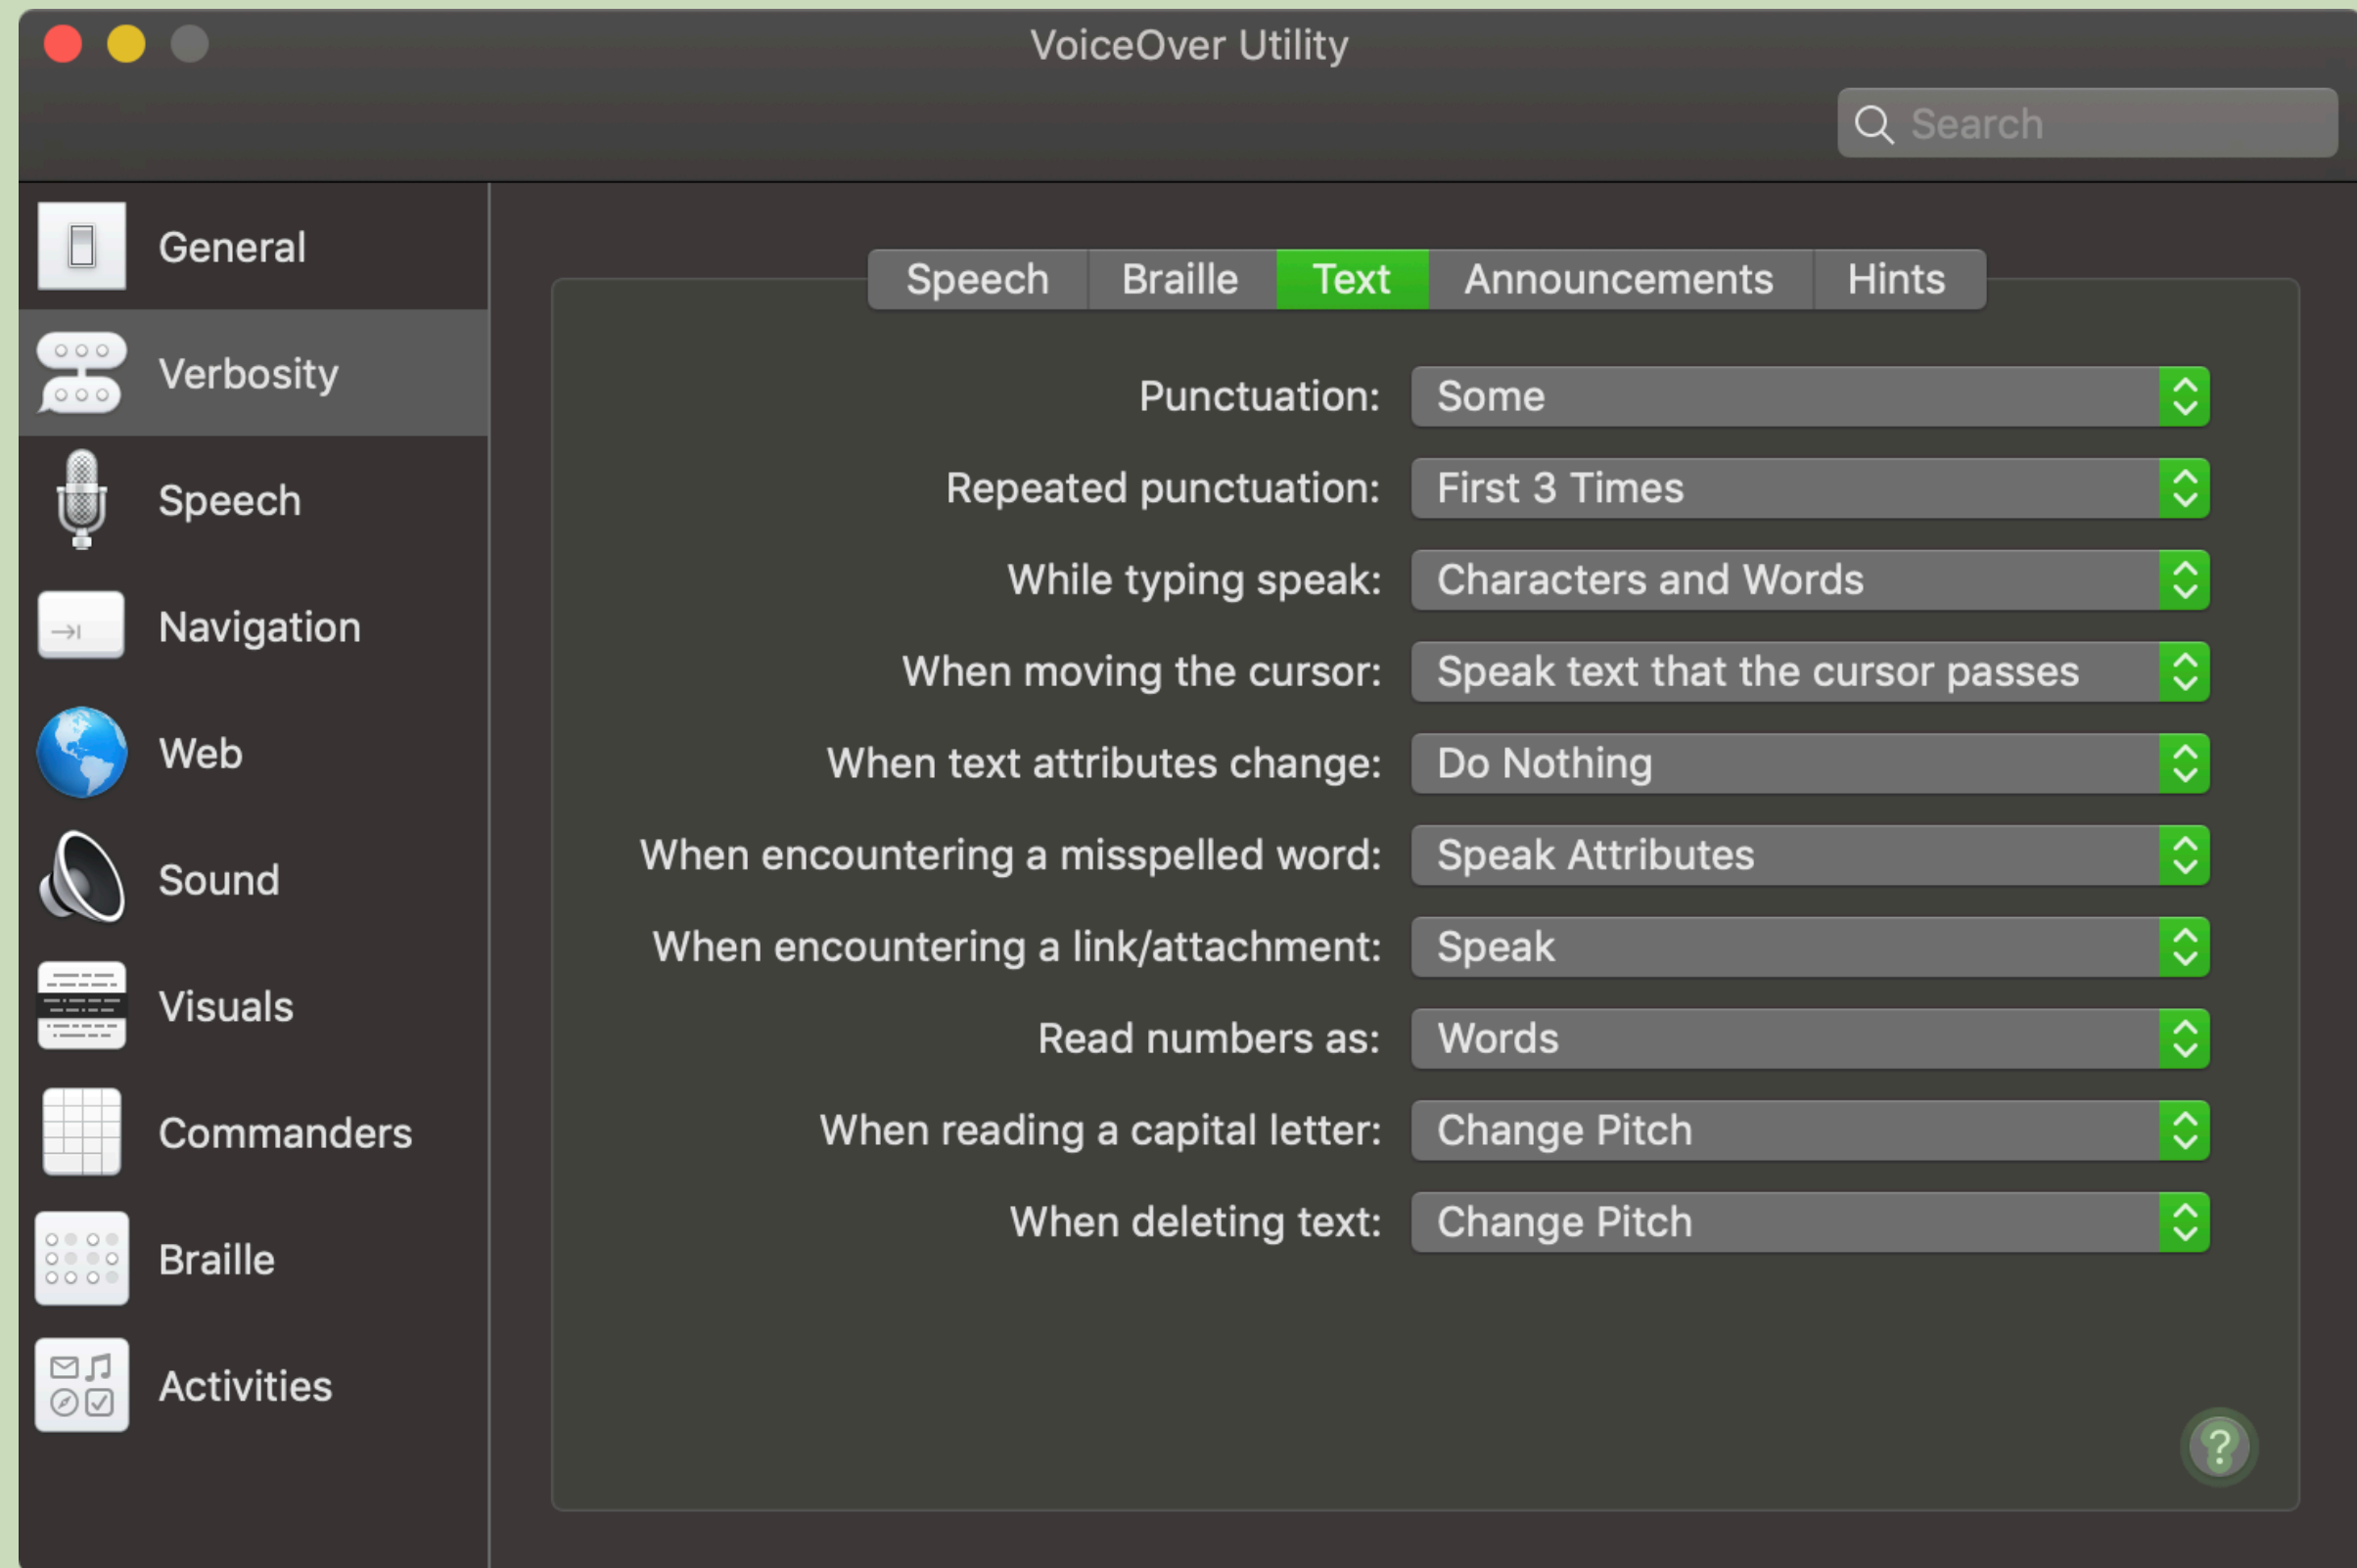

– James Craig, Apple, bugs.webkit.org

No!!

*The same is true
for screen readers:
They don't all need to
produce the same output.*

?

There is

no control.

***ARIA can help,
but not in
every situation.***

*Accessibility is **not**
only Screen Readers*

***Most non-Screen-Reader
assistive technology does
not work well with ARIA.***

Nuance released the lucky version 13 of [Dragon Naturally Speaking](#). I've been doing some preliminary testing and here's what Dragon 13 supports (so far) in terms of ARIA:

- `role="button"`
- `role="link"`
- `role="radio"`
- `role="checkbox"`
- `aria-label`

That's just in about 30 mins of testing, so there's definitely more to test, but this is a huge step.

*High
Contrast
Mode*

I'm a real link | As am I

I'm a placeholder link (no href)

I'm an ARIA link made out of a div

I'm an ARIA link made out of a button

I'm a **paragraph of text** with an ARIA link within me. Where I be?

I'm a real link | As am I

I'm a placeholder link (no href)

I'm an ARIA link made out of a div

I'm an ARIA link made out of a button

I'm a paragraph of text with an ARIA link
within me. Where I be?

Actually Disabled Button

Users!

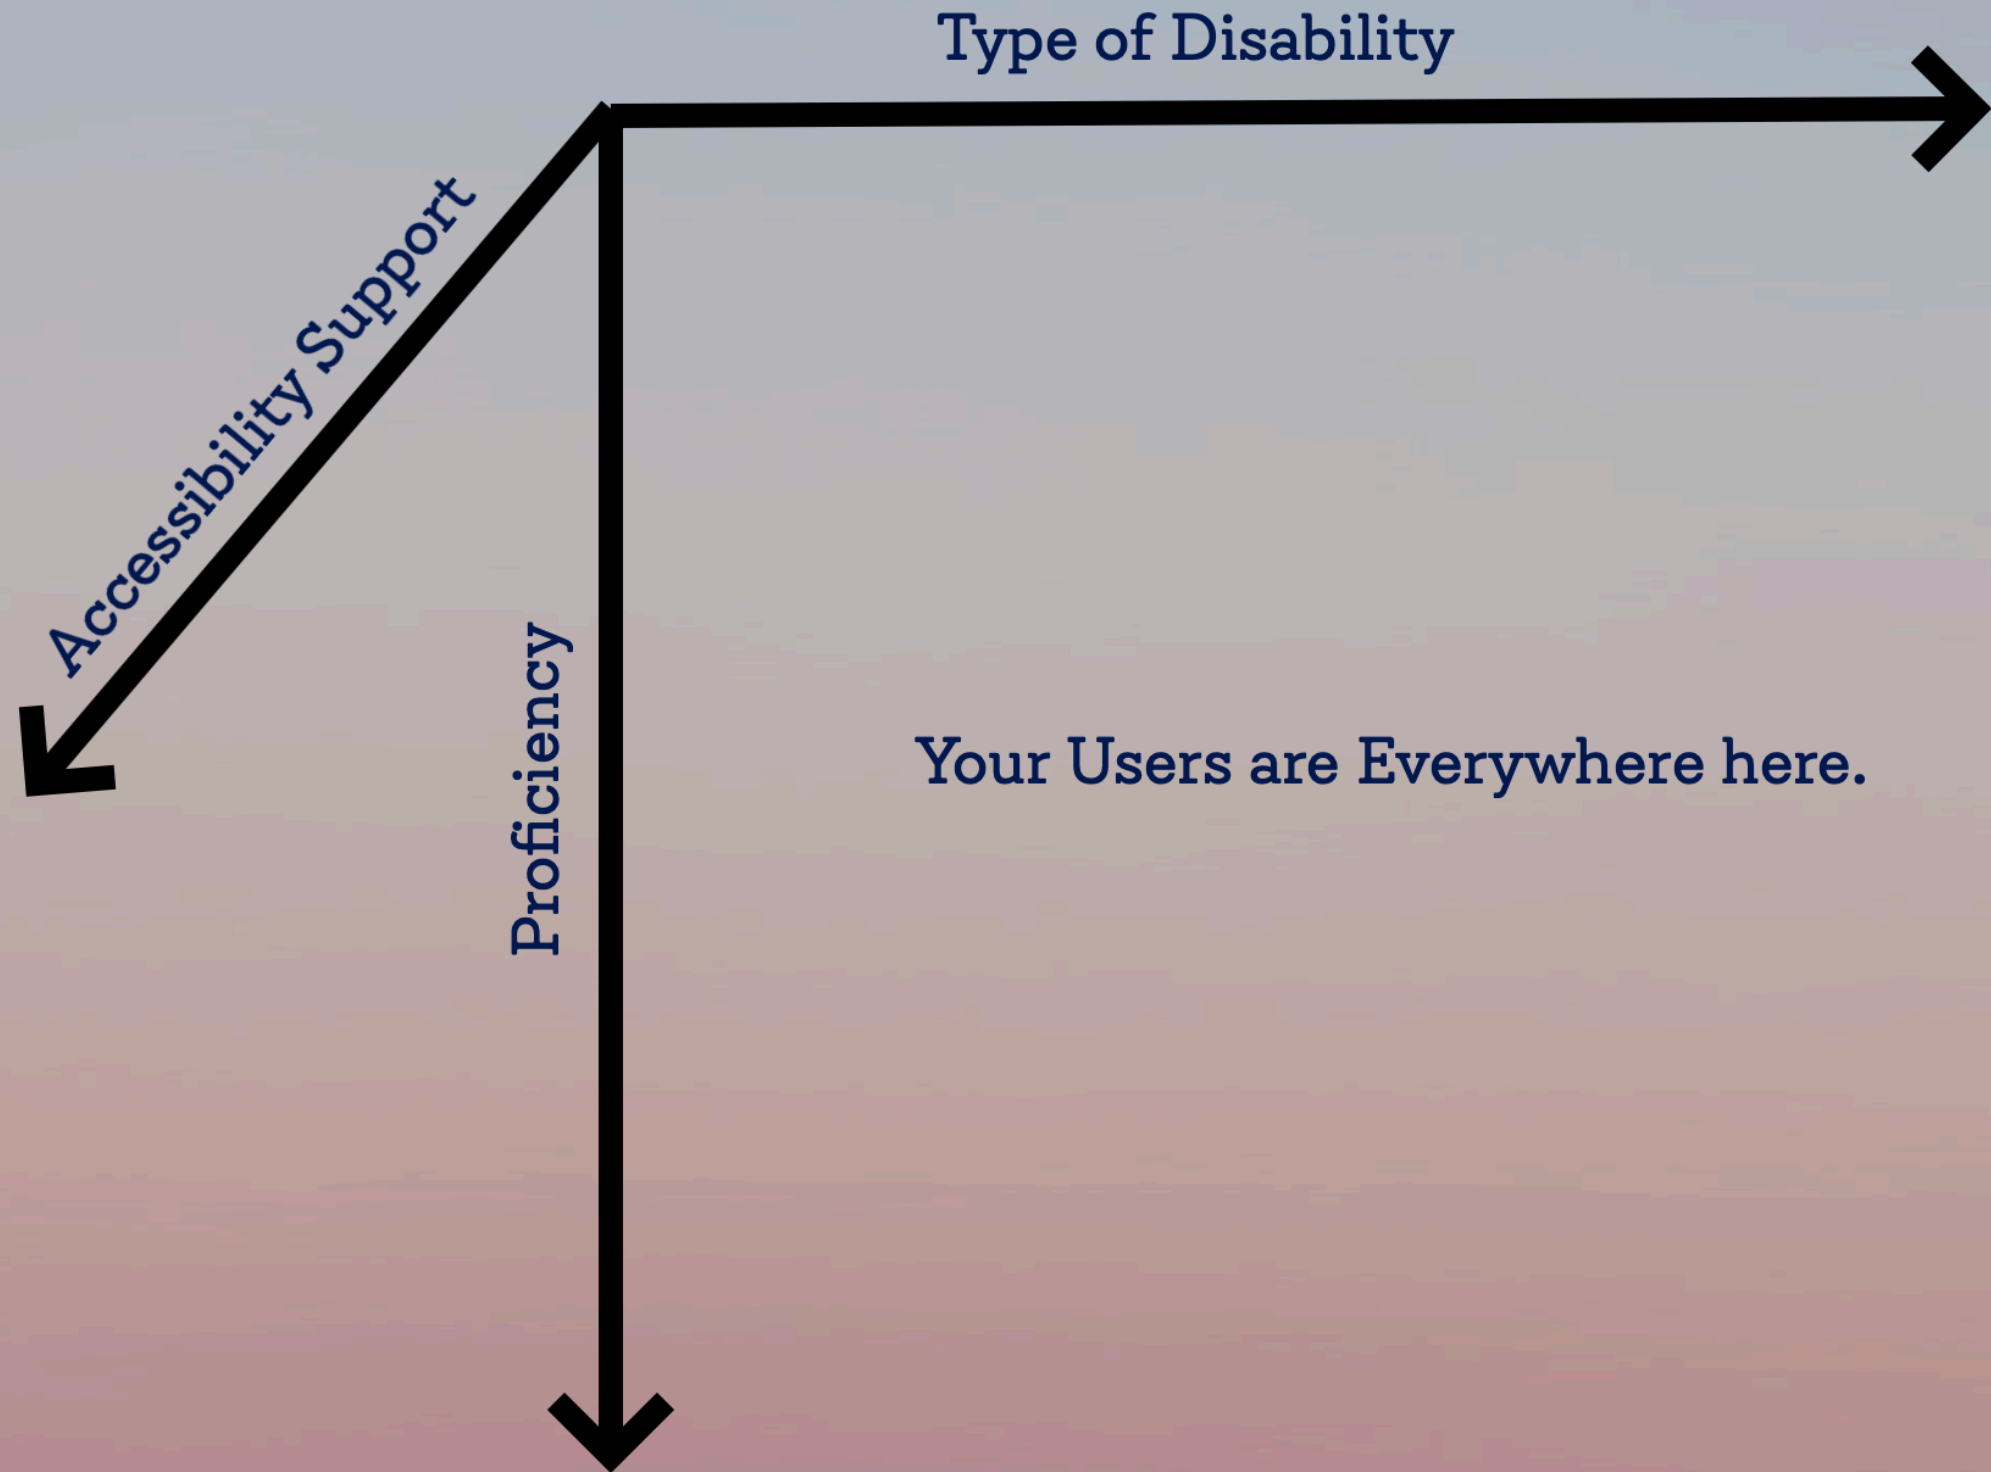

*Knowledge Levels
Vary Greatly*

***Users often **don't know** what their
computers can do for them.***

Other Users **hack** their assistive technology to work with inaccessible sites.

***Some users write CSS and JavaScript
to change websites to their needs.***

User =
Disability Type ×
Proficiency ×
Accessibility Support

Test with Diverse Users

Give Users Agency

Allow use of assistive technology that suits a particular user's needs.

***Try not to prescribe
how to use a component.***

*Use HTML to
describe elements.*

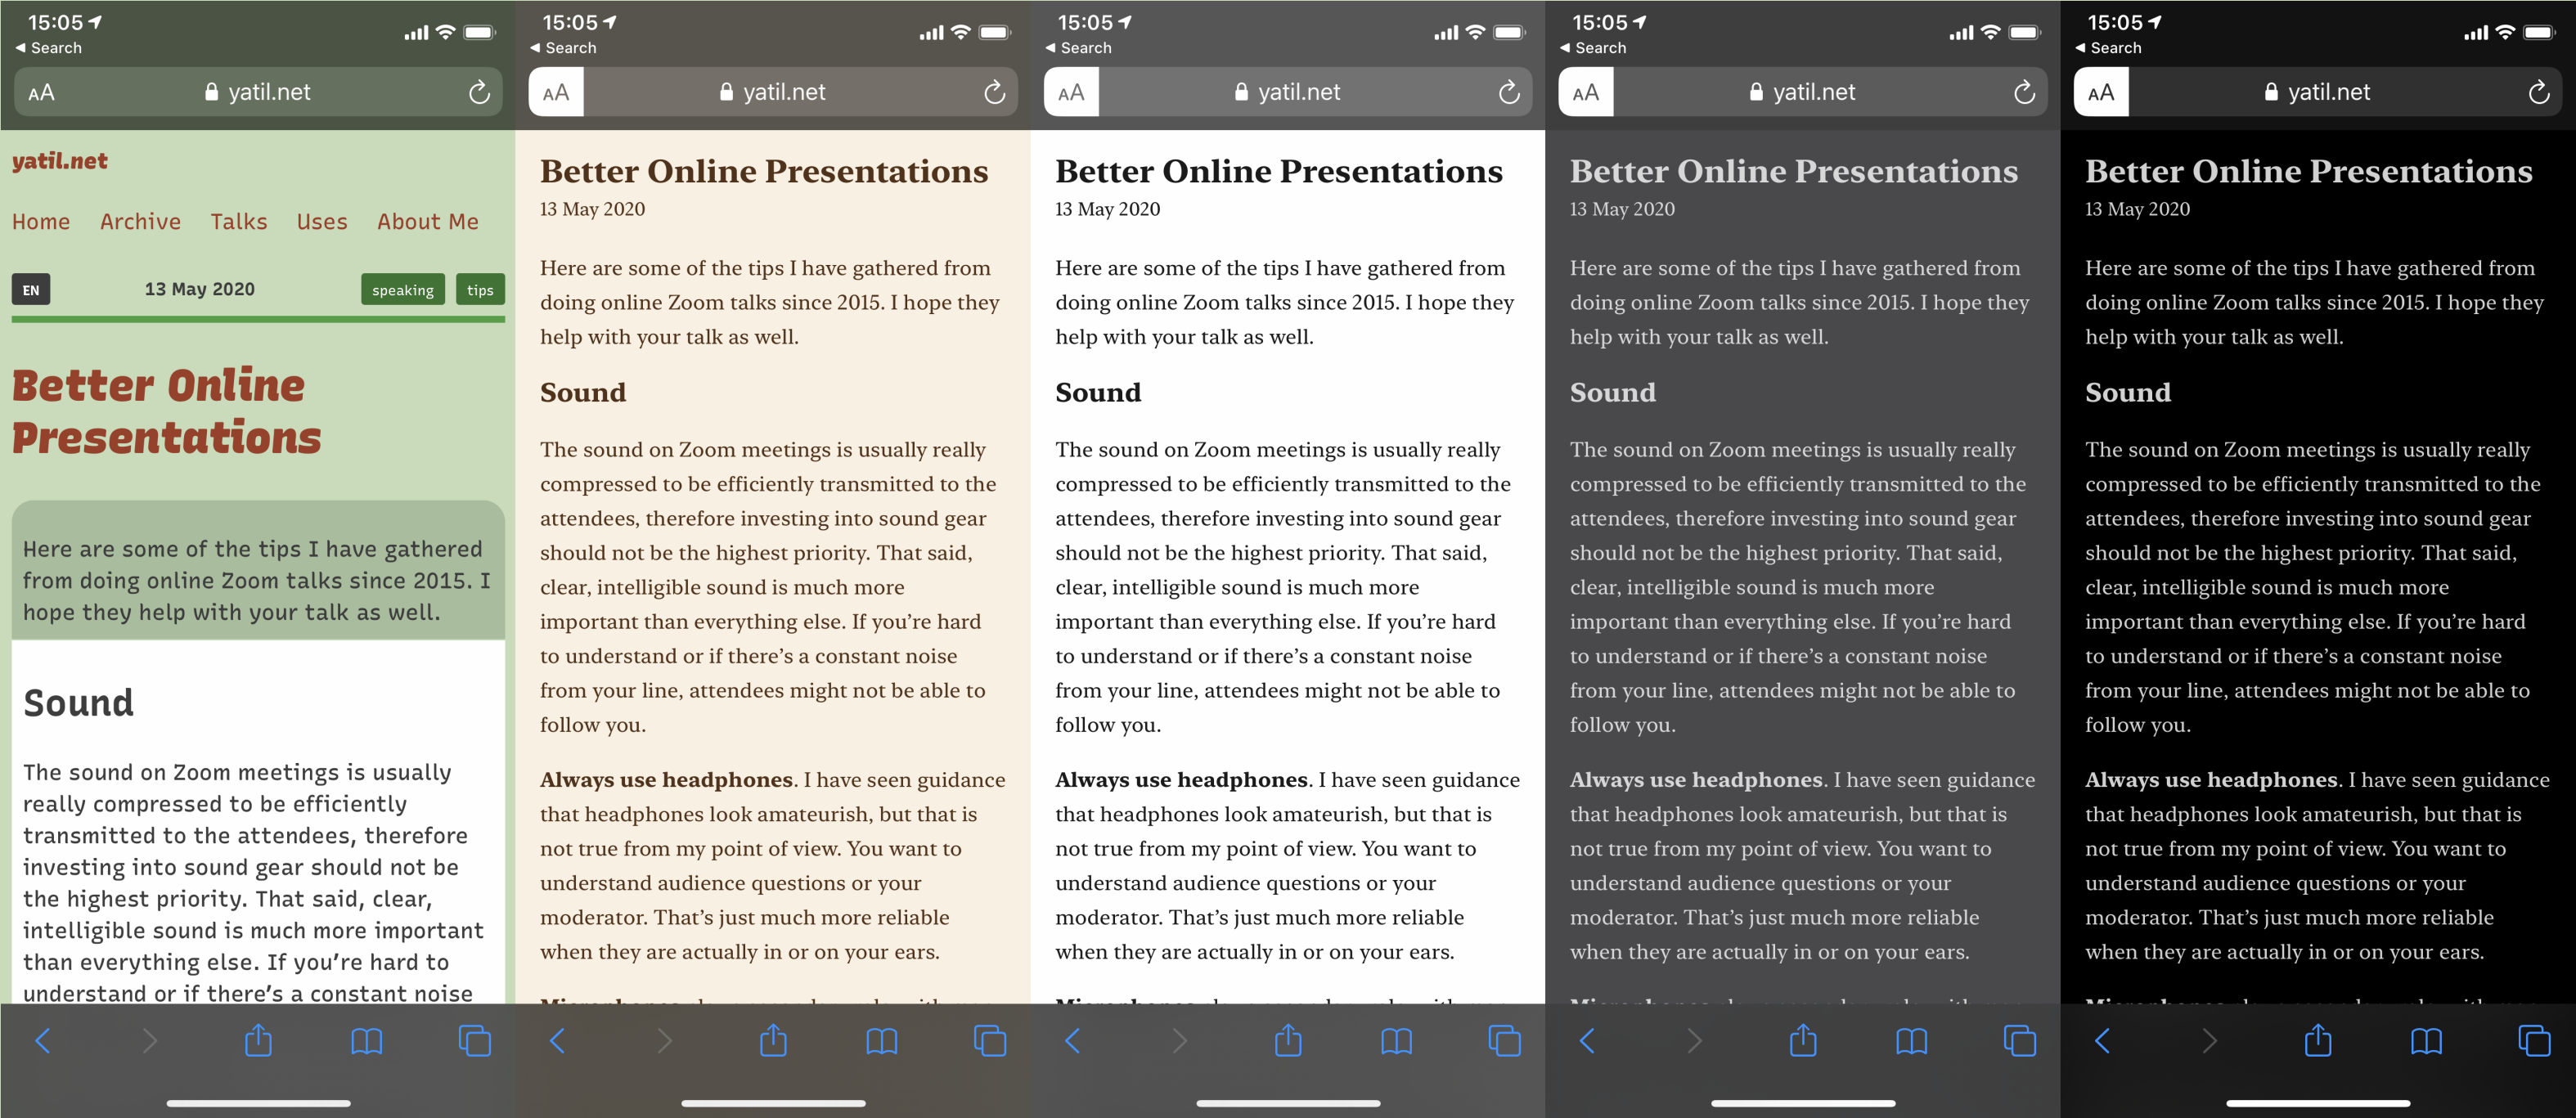

*Don't expect any
proficiency from users.*

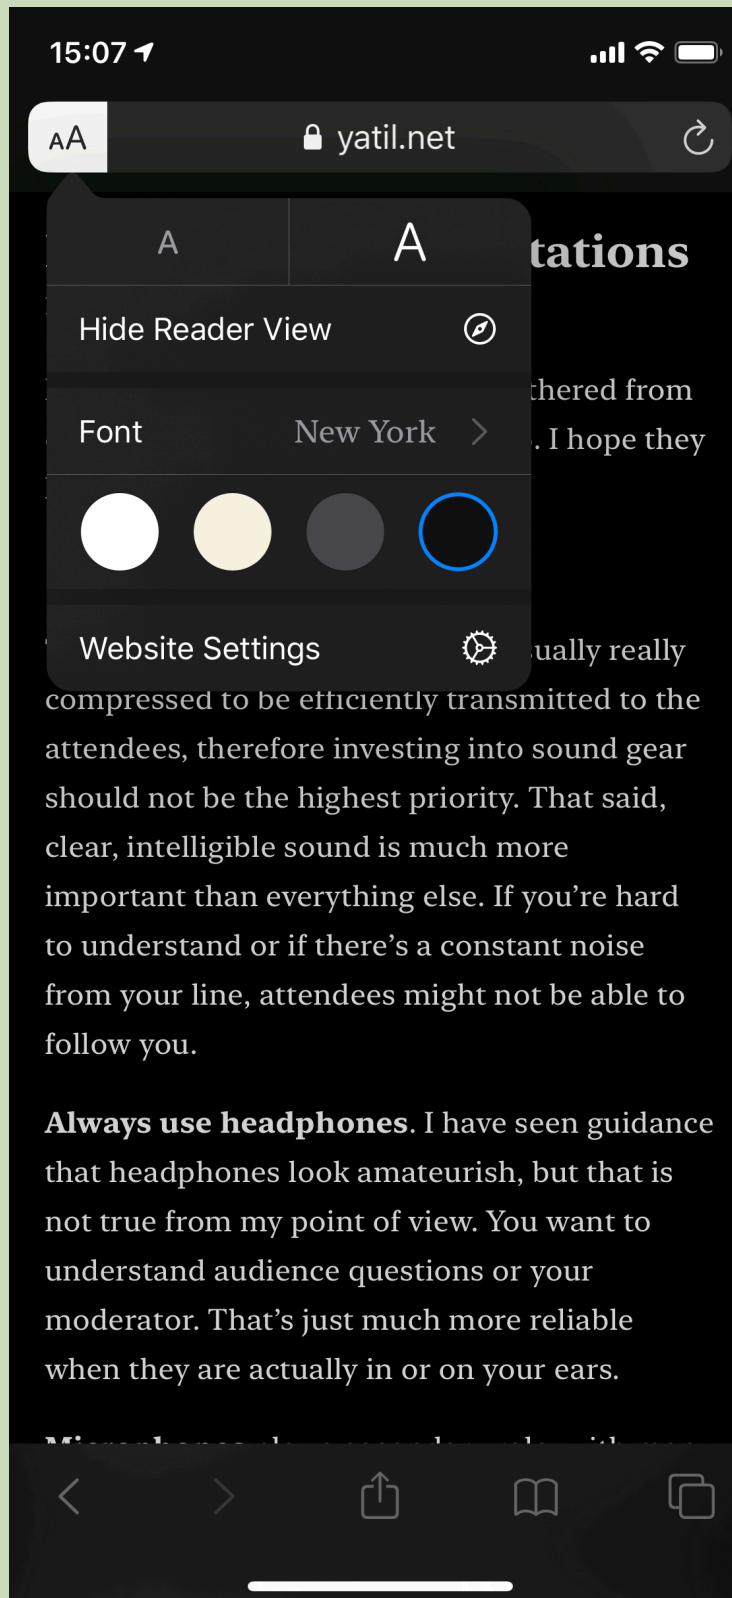

Don't break conventions!

***Users get a lot more
tools to use!***

*Reader
Mode*

Reader Mode

Native Support:

- Safari (since 2010, can set to default since 2015)
- Firefox (2015)
- Edge (2015)
- Chrome (soon???)

Accessibility in Context

The power of the Web is in its universality.
Access by everyone regardless of disability is an essential aspect.

The Web is fundamentally designed to work for all people, whatever their hardware, software, language, location, or ability. When the Web meets this goal, it is accessible to people with a diverse range of hearing, movement, sight, and cognitive ability.

Thus the impact of disability is radically changed on the Web because the Web removes barriers to communication and interaction that many people face in the physical world. However, when websites, applications, technologies, or tools are badly designed, they can create barriers that exclude people from using the Web.

Accessibility is essential for developers and organizations that want to create high-quality websites and web tools, and not exclude people from using their products and services.

Leveraging Operating System Preferences

prefers-reduced-motion
Media Query

```
@media (prefers-reduced-motion: reduce) {  
  * {  
    transition: none !important;  
    animation: none !important;  
  }  
}
```

Or, better, progressively enhance:

```
@media (prefers-reduced-motion: no-preference) {  
    /* All animation code */  
}
```

see “Defensive use of prefers-reduce-motion” à la [Patrick H. Lauke](#)

Support

prefers-reduced-motion media query

CSS media query based on a user preference for preferring reduced motion (animation, etc).

IE	Edge	Firefox	Chrome	Safari	iOS Safari	Opera Mini	Chrome for Android	Android Browser	Samsung Internet
9	18	72	78	12	13.1			4.4	9.2
10	79	73	79	12.1	13.2			4.4.4	10.1
11	80	74	80	13	13.3	all	80	80	11.1
		75	81	TP

On Windows

...it's complicated

*Short note on
prefers-reduced-motion
and puzzled (Windows) users*

Patrick H. Lauke @ TPG Blog

prefers-color-scheme
Media Query

```
:root {  
  --color: #333;  
  --bgcolor: #eee;  
}
```

```
@media (prefers-color-scheme: dark) {  
  :root {  
    --color: #eee;  
    --bgcolor: #333;  
  }  
}
```

```
html {  
  color: var(--color);  
  background-color: var(--bgcolor);  
}
```

DEMO

***We³ also get a lot
more tools to use!***

³Designers & Developers

Media Queries Level 5(?)

*inverted-colors*⁴

→ none

→ inverted

Supported in Safari macOS & iOS.

⁴Planned in Media Queries Level 5

prefers-reduced-transparency⁴

→ no-preference

→ reduce

No support yet.

⁴Planned in Media Queries Level 5

prefers-contrast⁴

→ no-preference

→ high

→ low

No support yet.

⁴Planned in Media Queries Level 5

*forced-colors*⁴

→ none

→ active

No support yet.

⁴Planned in Media Queries Level 5

Environment MQs⁴

⁴Planned in Media Queries Level 5

*light-level*⁴

→ dim

→ normal

→ washed

No support yet.

⁴Planned in Media Queries Level 5

environment-blending⁴

→ opaque

→ The document is rendered on an opaque medium, such as a traditional monitor or paper. Black is dark and white is 100% light.

→ additive

→ The display blends the colors of the canvas with the real world using additive mixing. Black is fully transparent and white is 100% light.
For example: a head-up display in a car.

→ subtractive

→ The display blends the colors of the canvas with the real world using subtractive mixing. White is fully transparent and dark colors have the most contrast.
For example: an LCD display embedded in a bathroom mirror.

No support yet.

⁴Planned in Media Queries Level 5

Conclusion

- Do not make assumptions about users and the tools they use
- Prepare your content and design for different circumstances
- Embrace the uncertainty

Thank You!

Eric Eggert
