

IS KUBERNETES

TOO COMPLICATED

@juliafmorgado

I'M **JULIA** FURST MORGADO!

Global Technologist at Veeam

CNCF Ambassador

AWS Community Builder

Public Speaker

Containerizing

WHAT IS KUBERNETES?

Containers
packaging
application
its dependencies
and configuration

es, but we are
going to give
our computer
to the client

WHAT IS KUBERNETES?

K8s is an open source container orchestrator platform (it simplifies the deployment, scaling, and management of applications packaged in containers)

Maybe you **DON'T**
need **Kubernetes**.

**“If your application is complicated,
use Kubernetes to make it simple.
If your application is simple, don't
complicate it with Kubernetes.”**

Learning curves of some Container Orchestration Engines

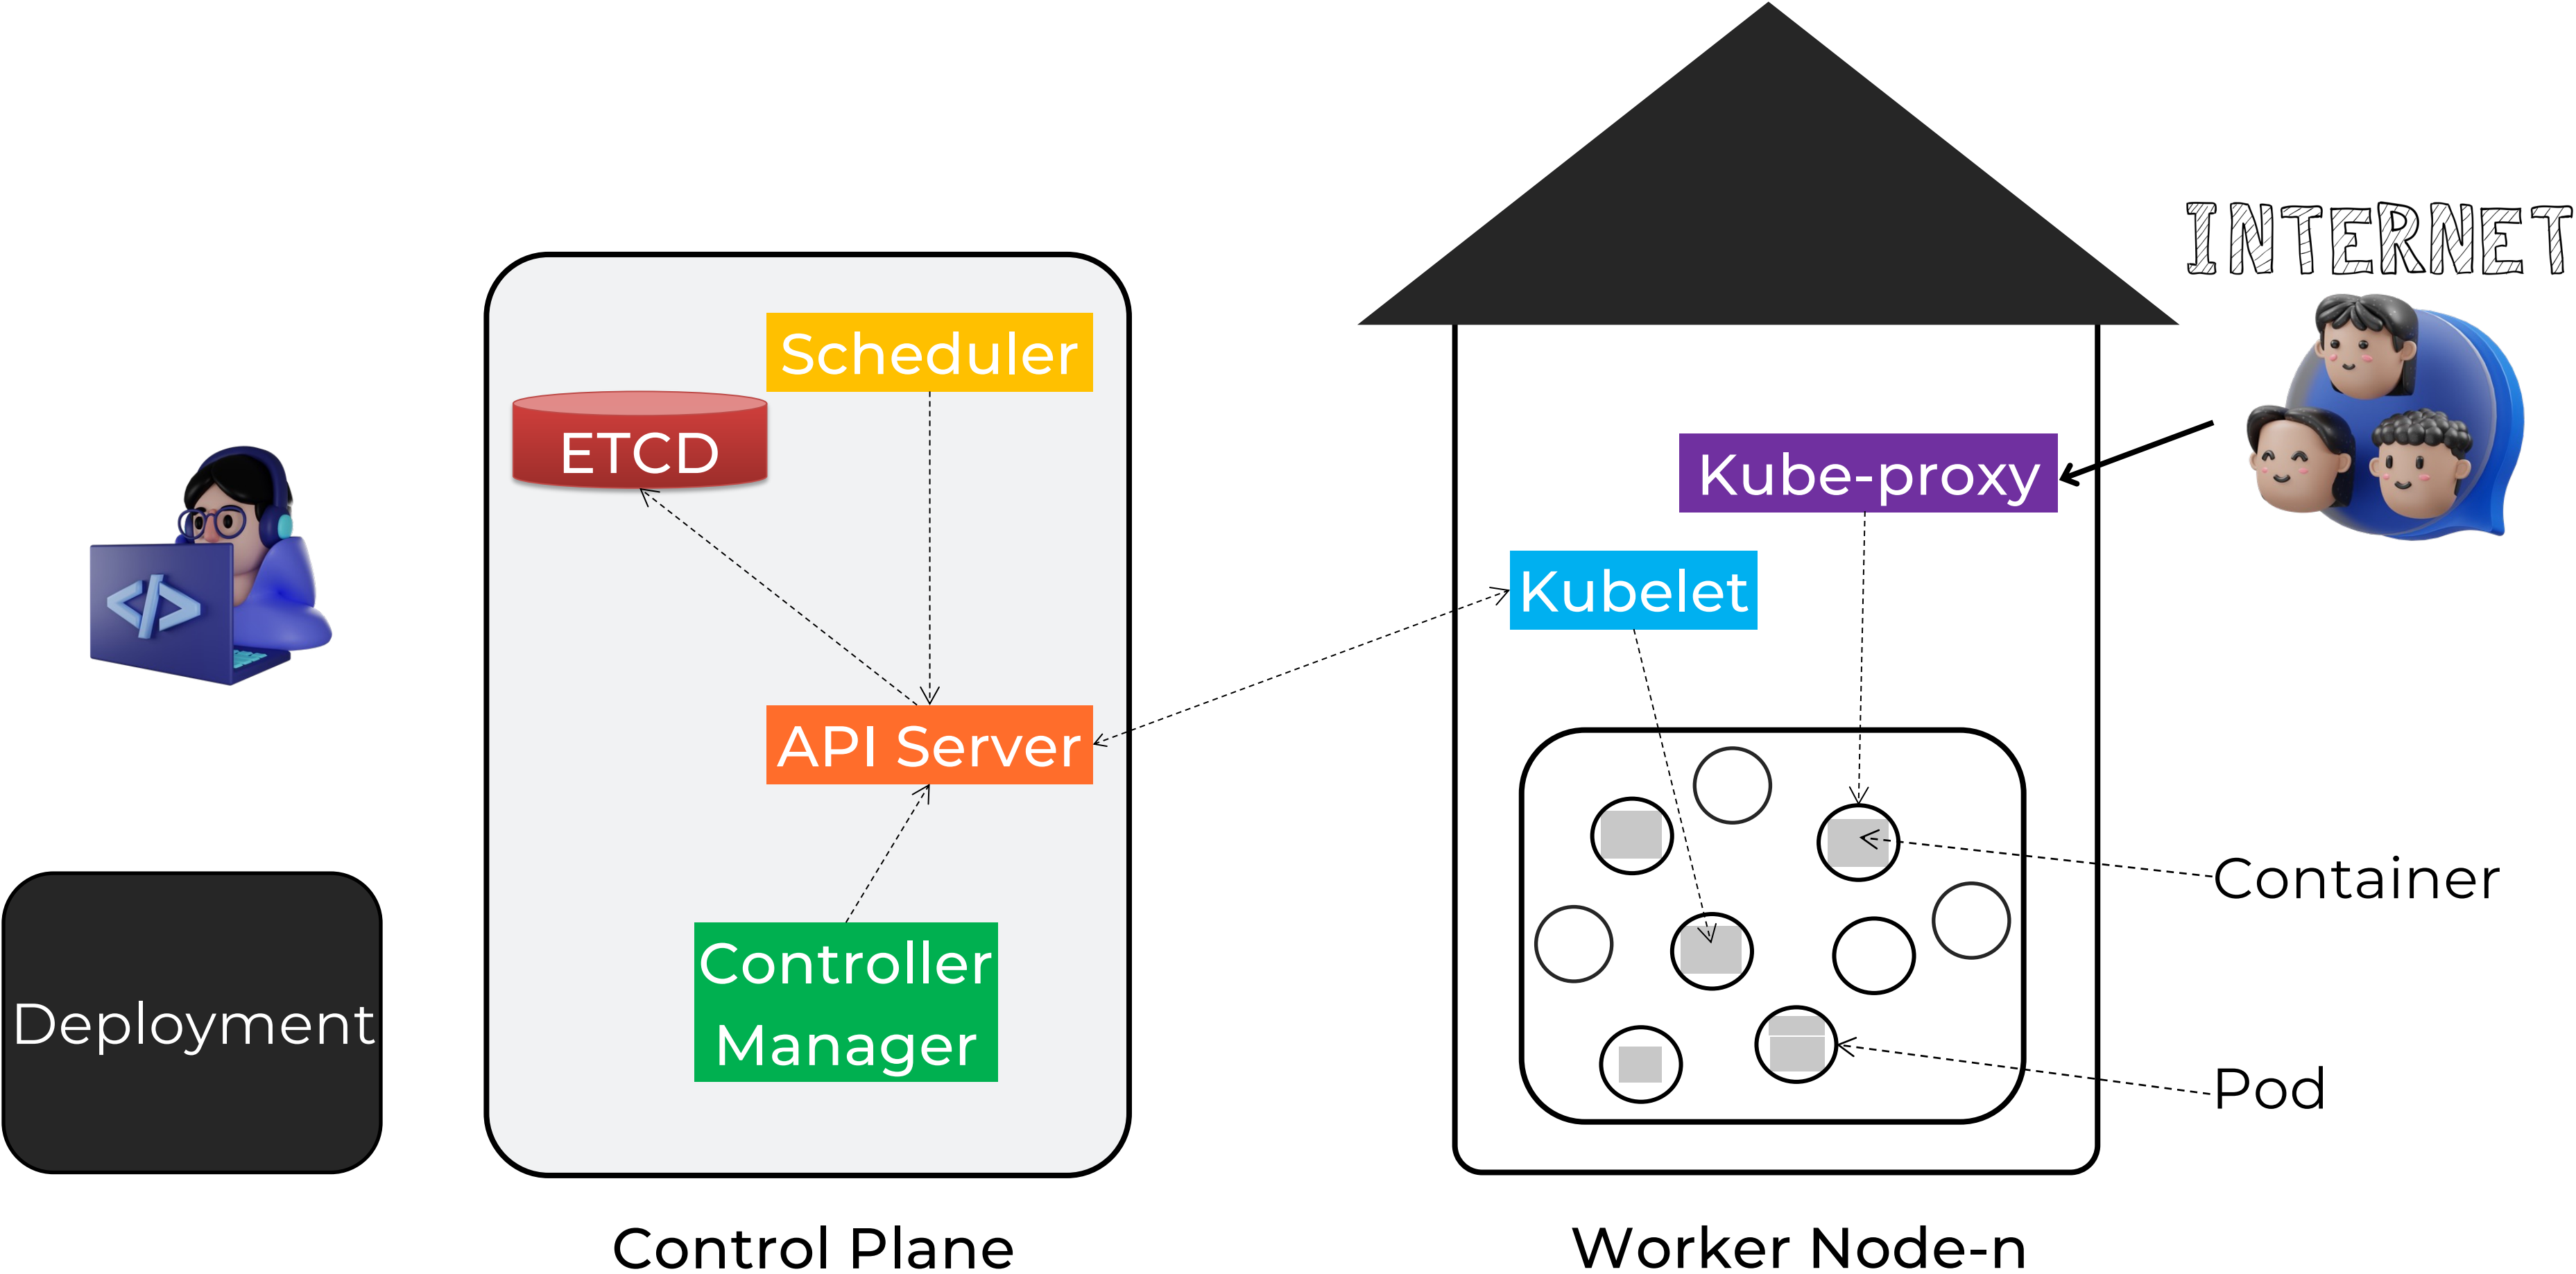

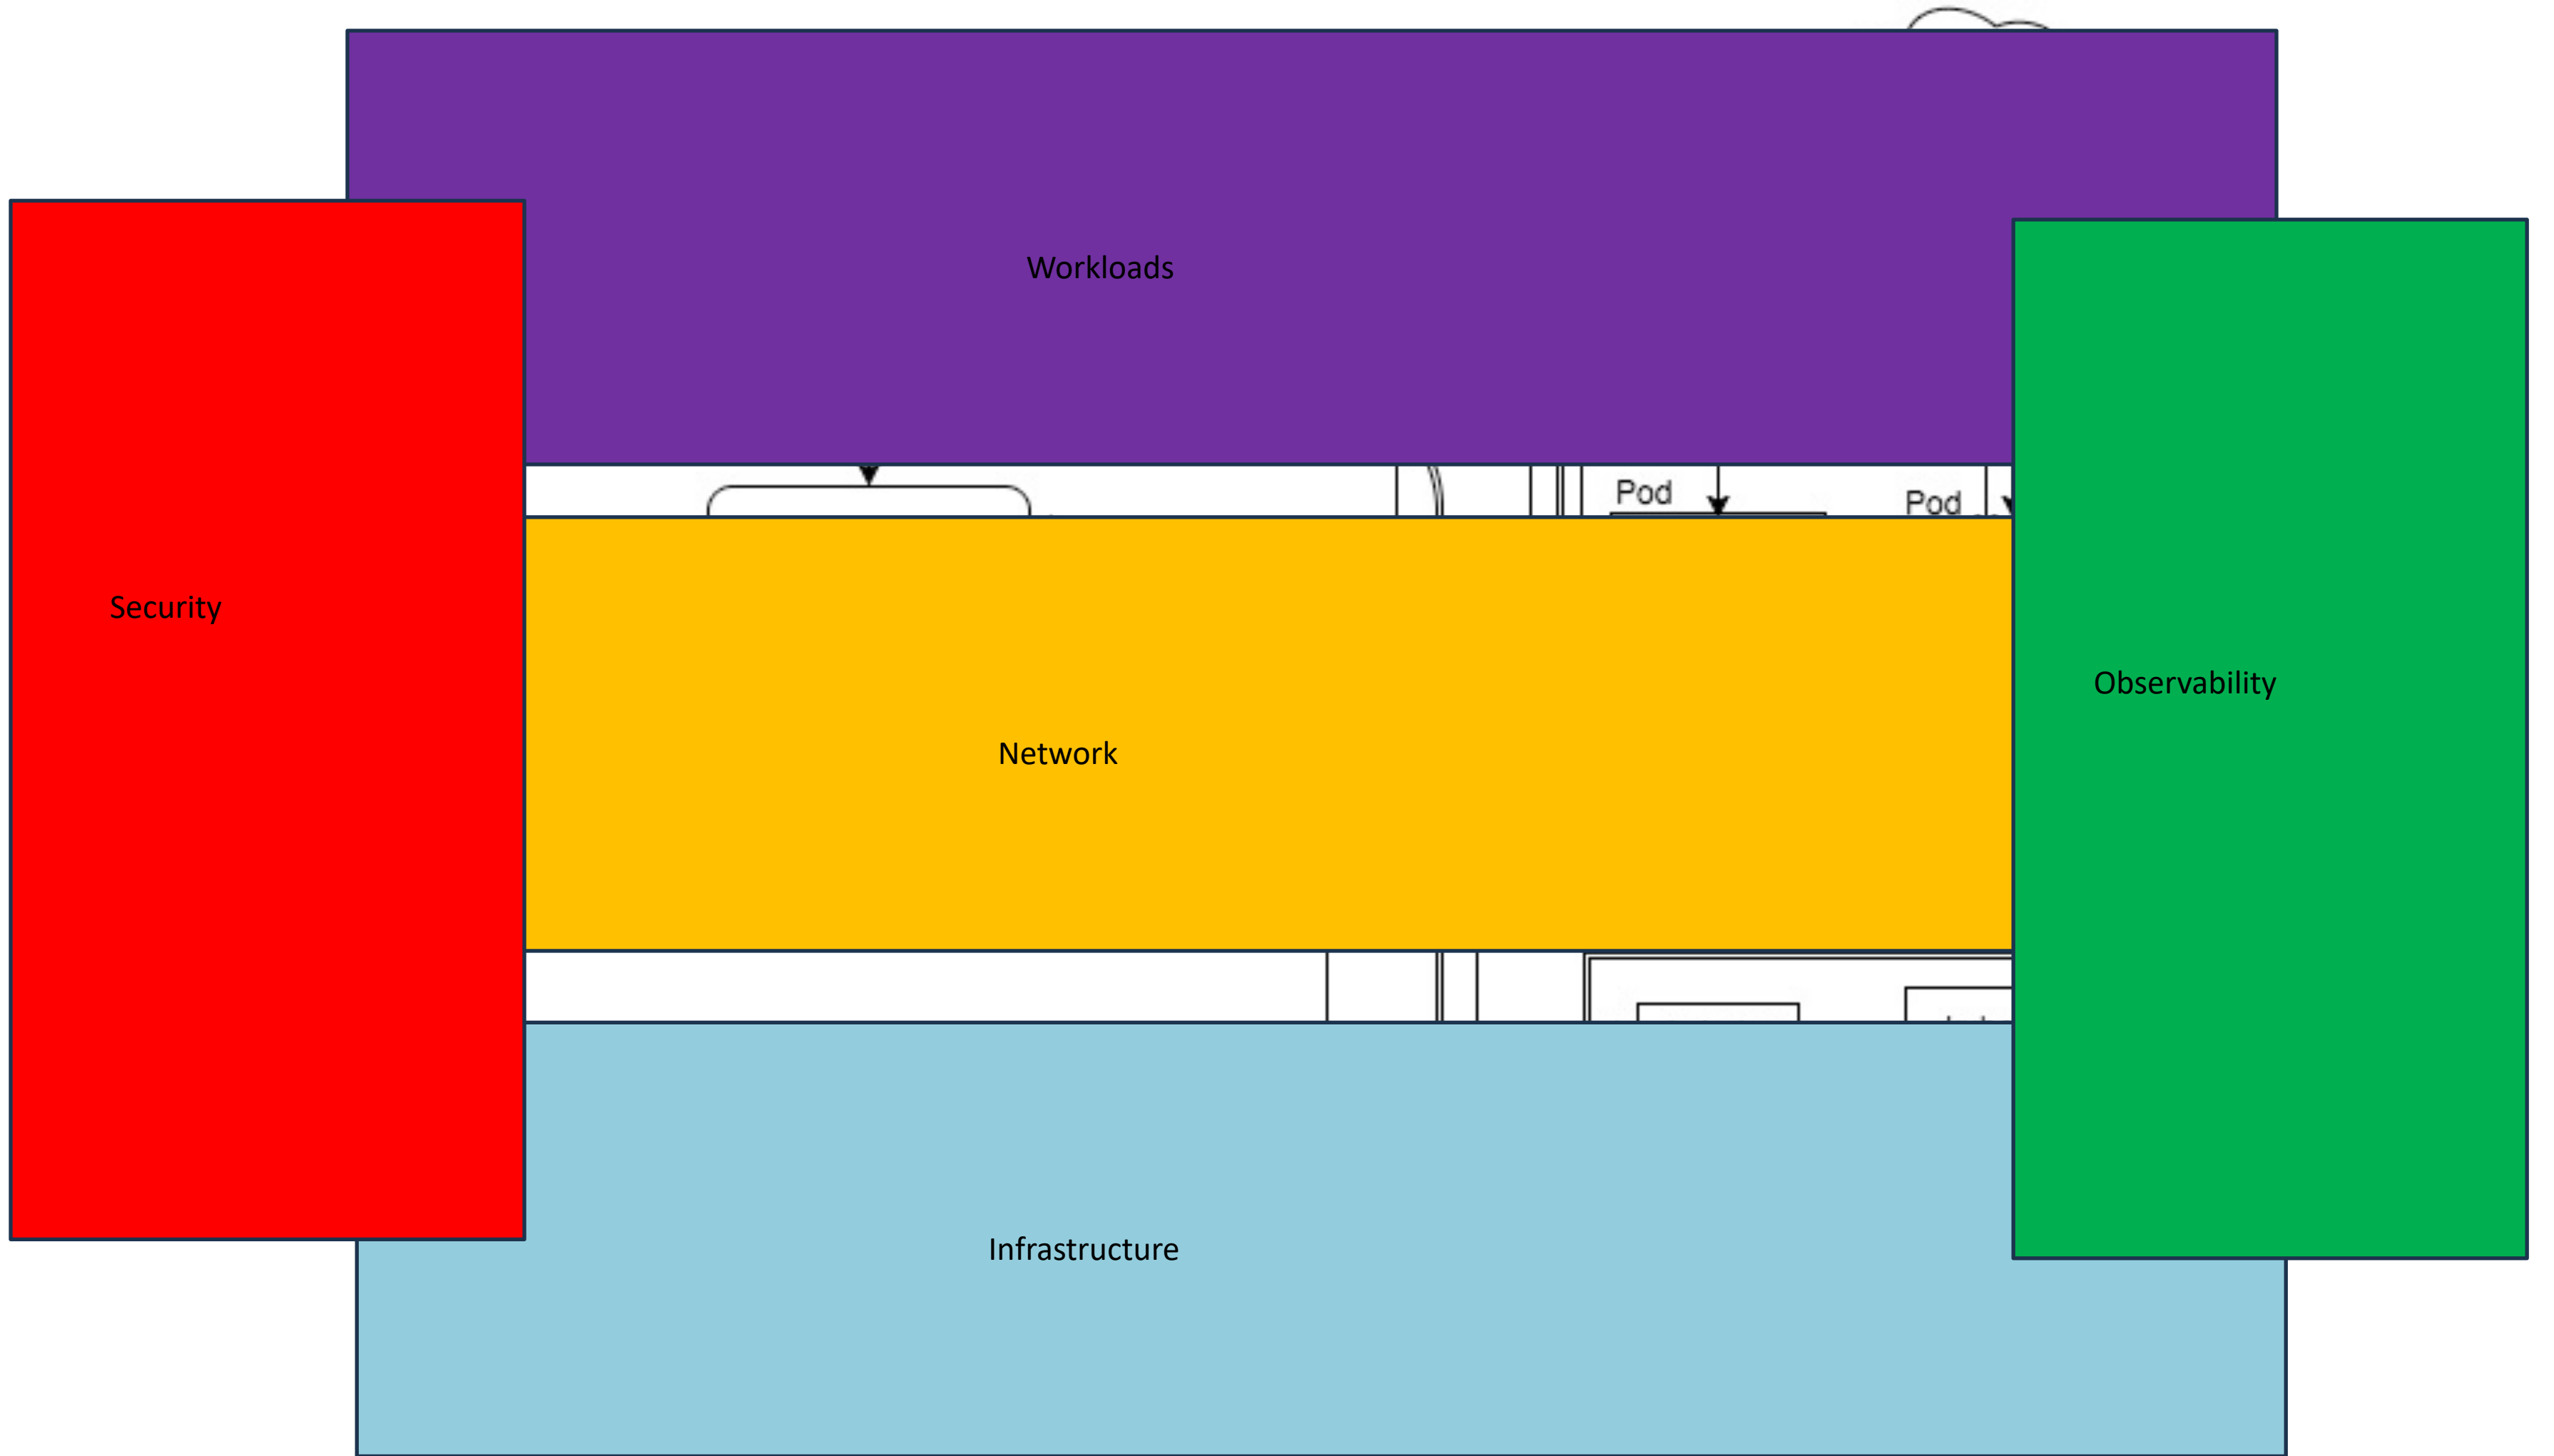

LET'S USE AN ANALOGY

**WHAT DOES KUBERNETES
HAVE TO DO WITH THIS**

KUBERNETES ARCHITECTURE

Workloads:
Stable? Secure?
Observable?

Security:

- Namespace isolation
- API access limitation
- RBAC/ServiceAccounts
- PSS/PSA

Observability:

- Tool stack
- Cluster & workload info
- Logs, metrics & traces

Network (inbound traffic):

- Ingress controller selection
- Gateway API
- Own custom implementation

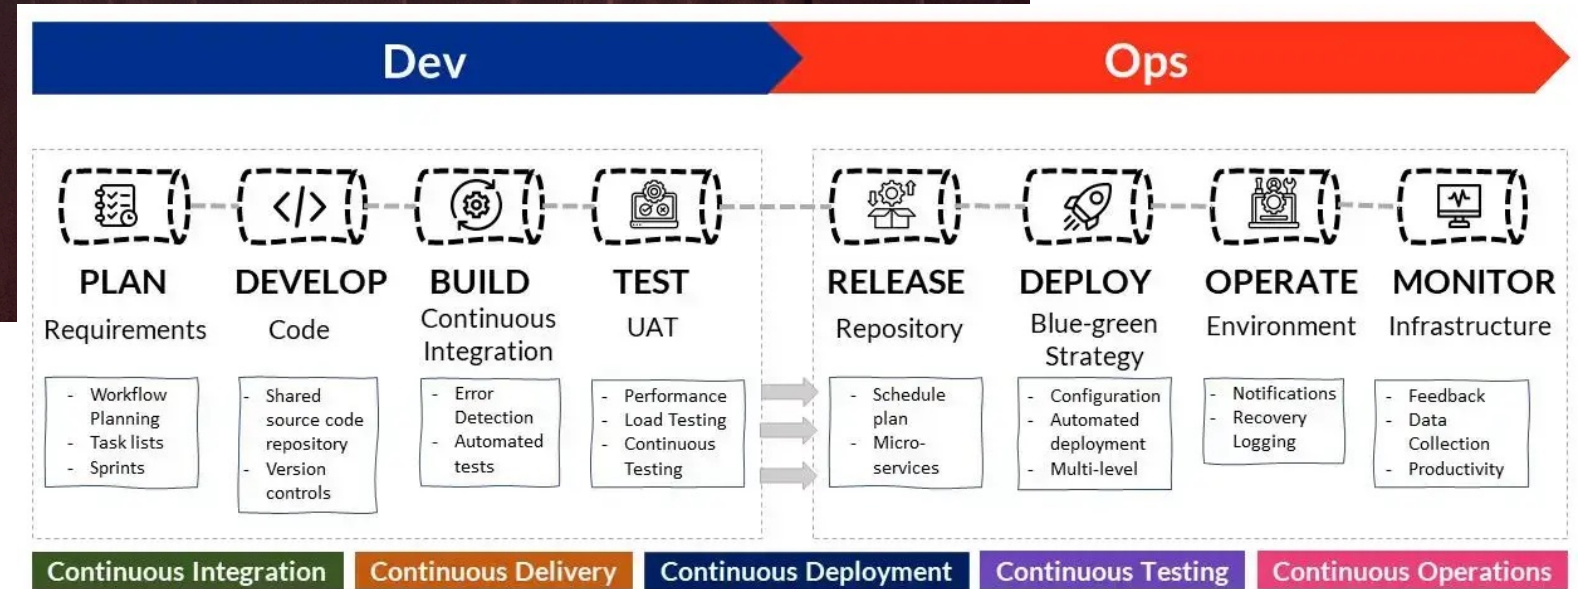

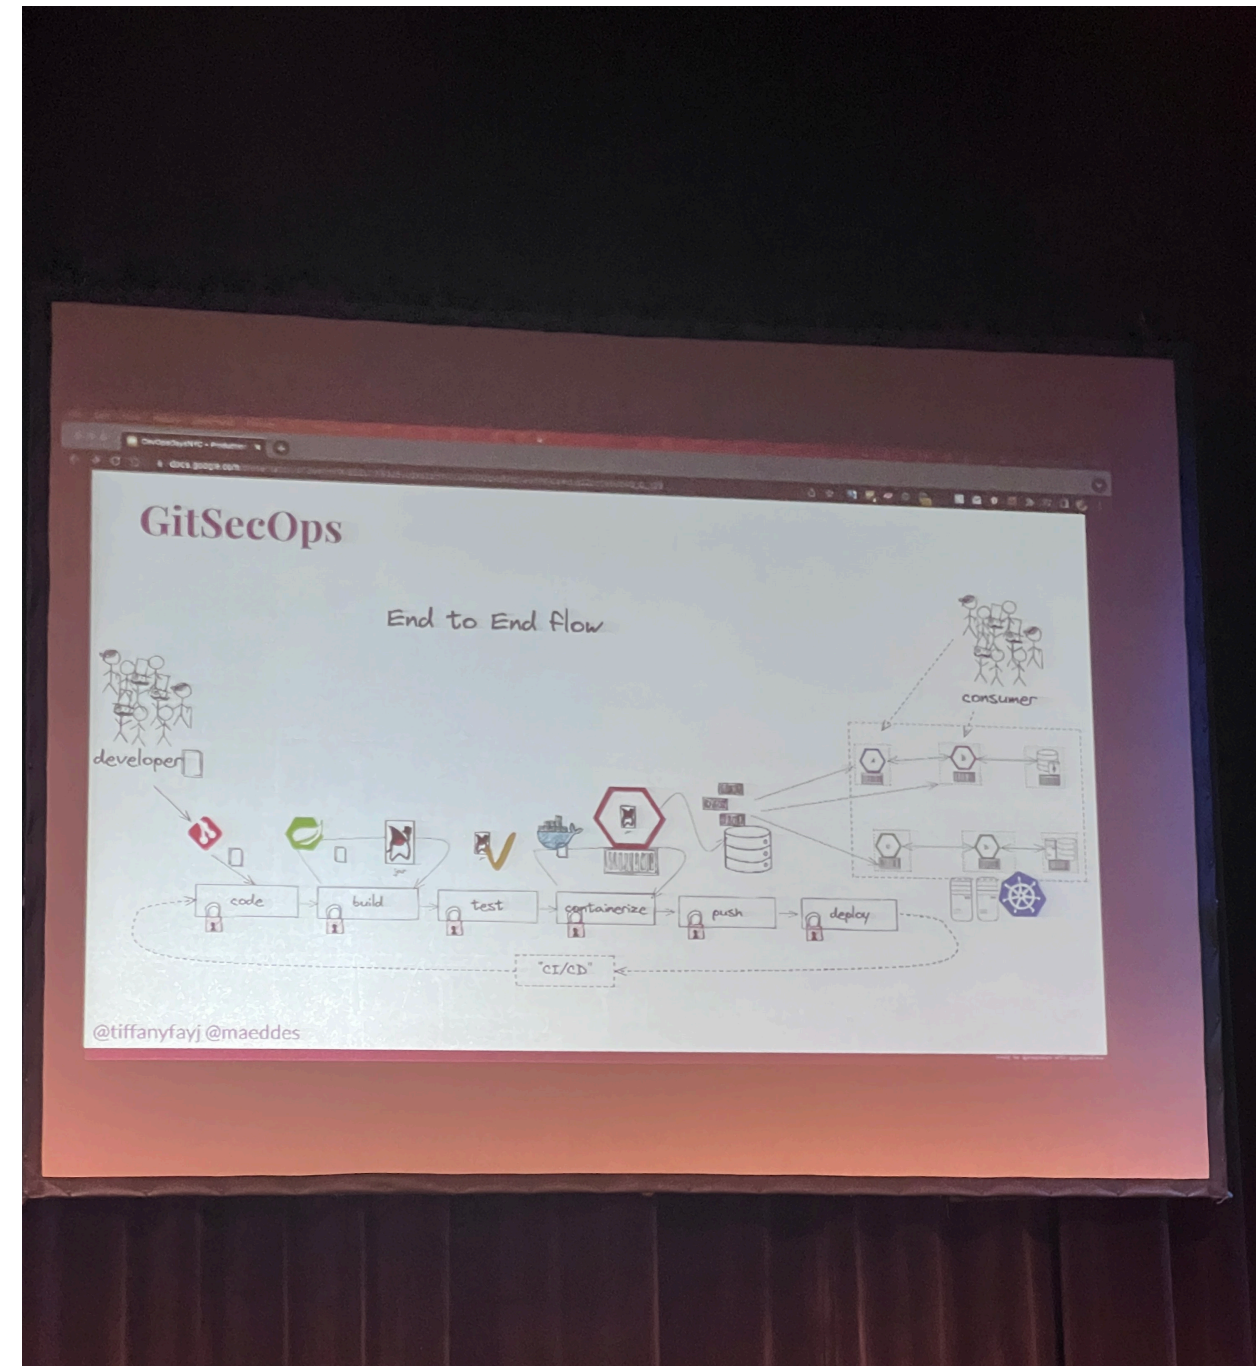

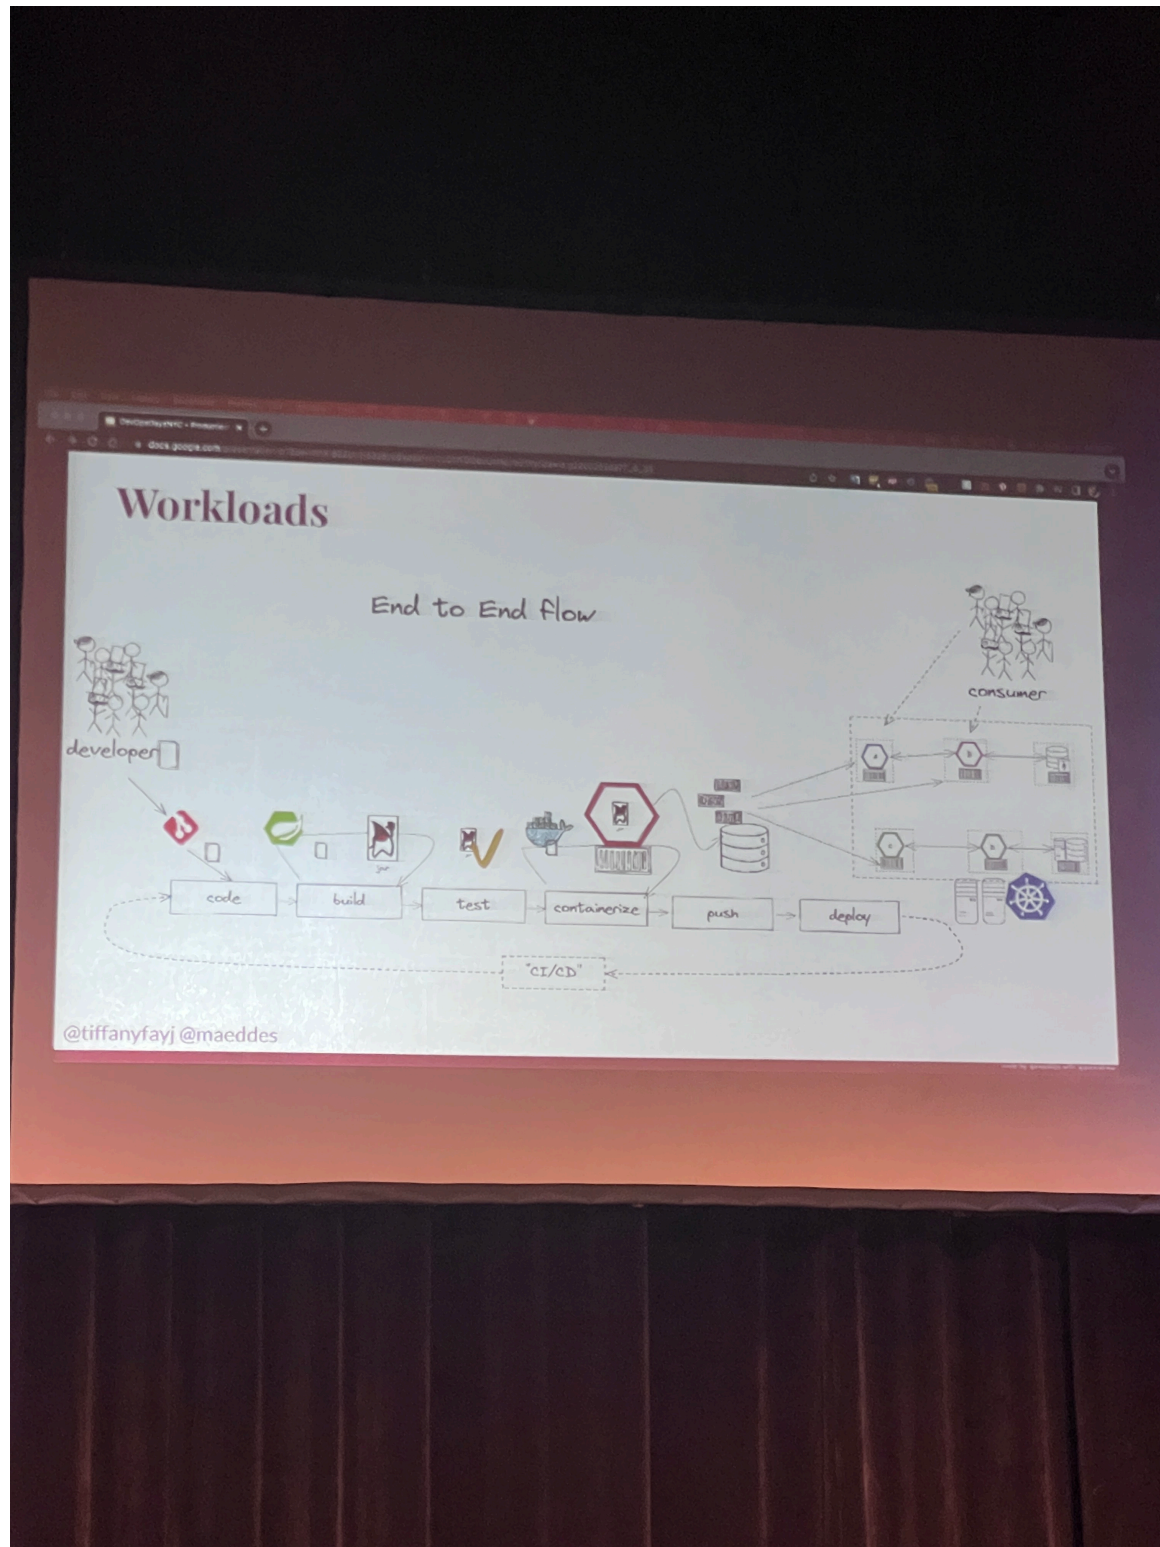

Traffic control:

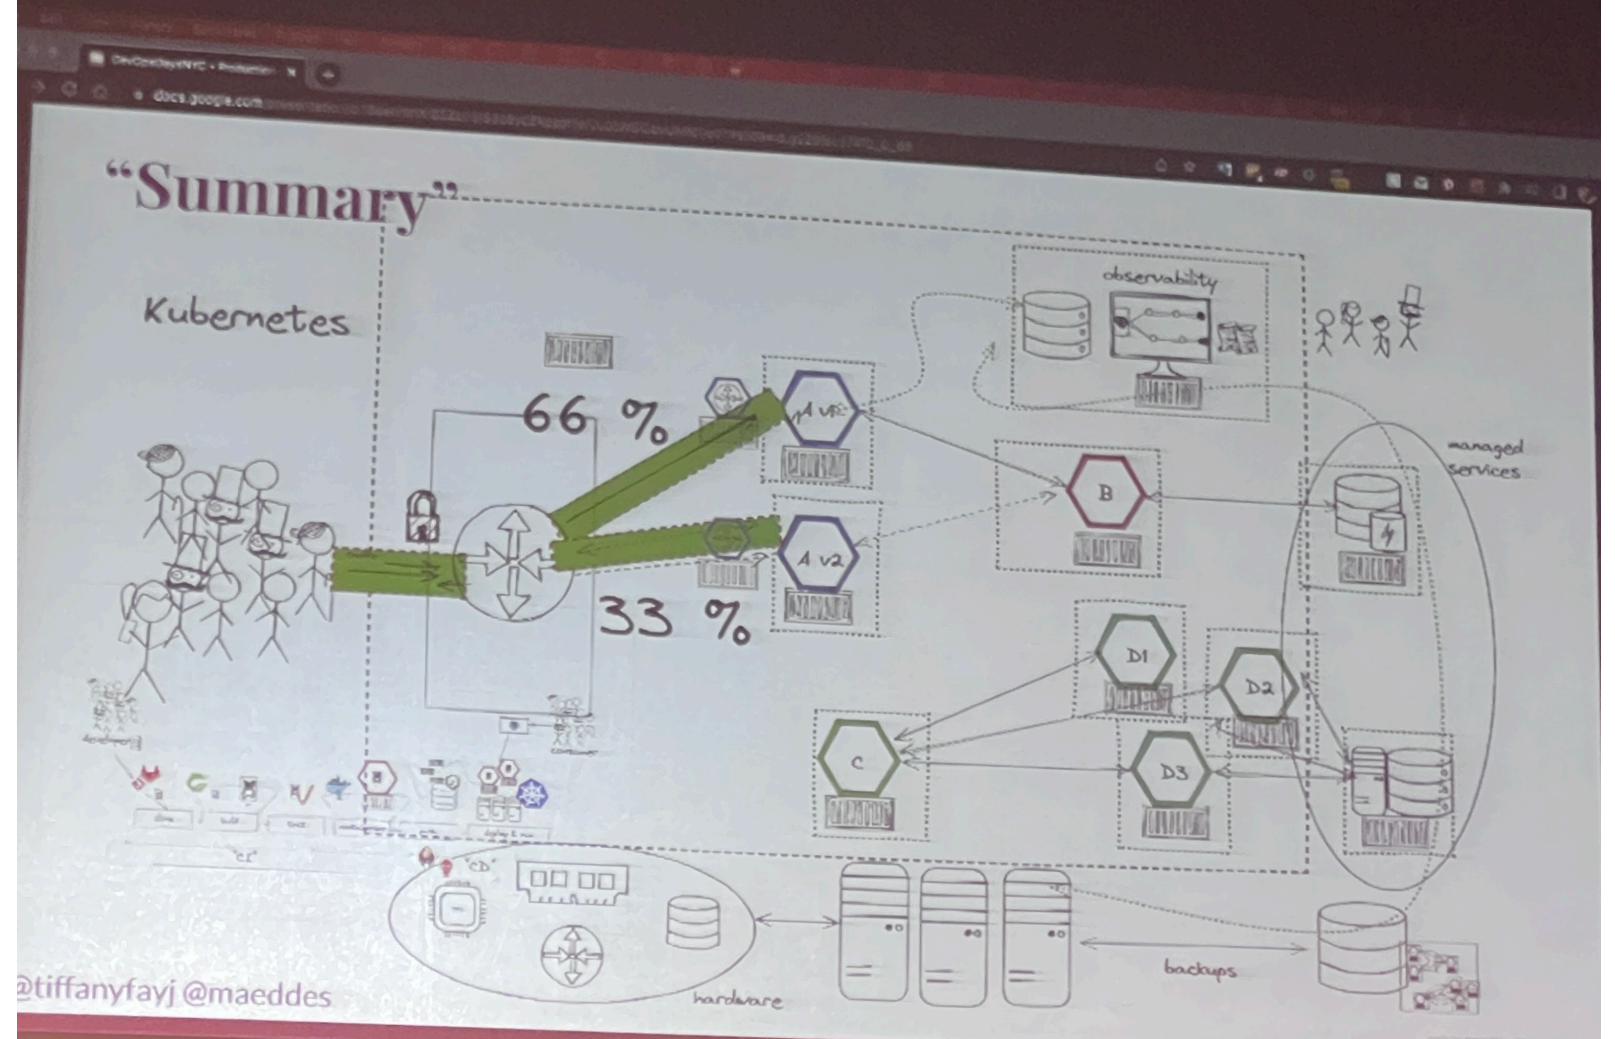

Network policies
Encryption
Advanced routing

Infrastructure:

- Provide underlying hardware
- VMs for cluster
- Storage (classes) for PVs
- Provide backup (cluster & workloads)
- Access to managed services
- High-scale of nodes req. network tuning

pod logs	logs	observability
kubelet logs		
control plane logs		
metrics-server	metrics	
time series database (Prom, etc)		
tracing	tracing	
ingress controller	networking	
service mesh		
Gateway API		
network policies	security	
secret manager		
PVC backups	infrastructure/ backups	
control plane backups (if applicable)		
cluster autoscaler (when applicable)		

@tiffanyfayj @maeddes

Summary

- In the end there is no right or wrong,
it is more about the decision where to invest the time and money
 - Maintain the stack yourself -> Invest in the skill and have it in-house
 - Have someone done it for you -> Invest in service providers
- In general we recommend to use the highest abstraction possible
Don't solve problems which have already been solved!
- Using and relying on a ready tested platform will let you focus more on higher
abstractions -> your apps!
- If there is a managed solution that suits your needs -> use it!
- If you want to manage the stack yourself -> get enablement & consultancy

Kubernetes and feeling defeated

75 upvotes 26 comments 0 awards

r/kubernetes · Posted by u/Seankala 4 days ago

Is it just me, or is Kubernetes supposed to be this frikkin hard and confusing to learn?

Kubernetes is great, it's complex

+5

This has been something that has been said in many conversations over the past 3 years and even longer. "Kubernetes is complex" I cannot really argue because yes, it is, but then I feel like so is virtualisation, cloud, and mainframes unless you work with it every day!

Was your first week learning Kubernetes as bad as mine?

133 upvotes 89 comments 0 awards

Kelsey Hightower ✓
@kelseyhightower

Kubernetes is a platform for building platforms. It's a better place to start; not the endgame.
