

Prototyping change in your organisation

Saakshi Muralidhar | Senior Organisational Designer

What's your name again?

saak

shi

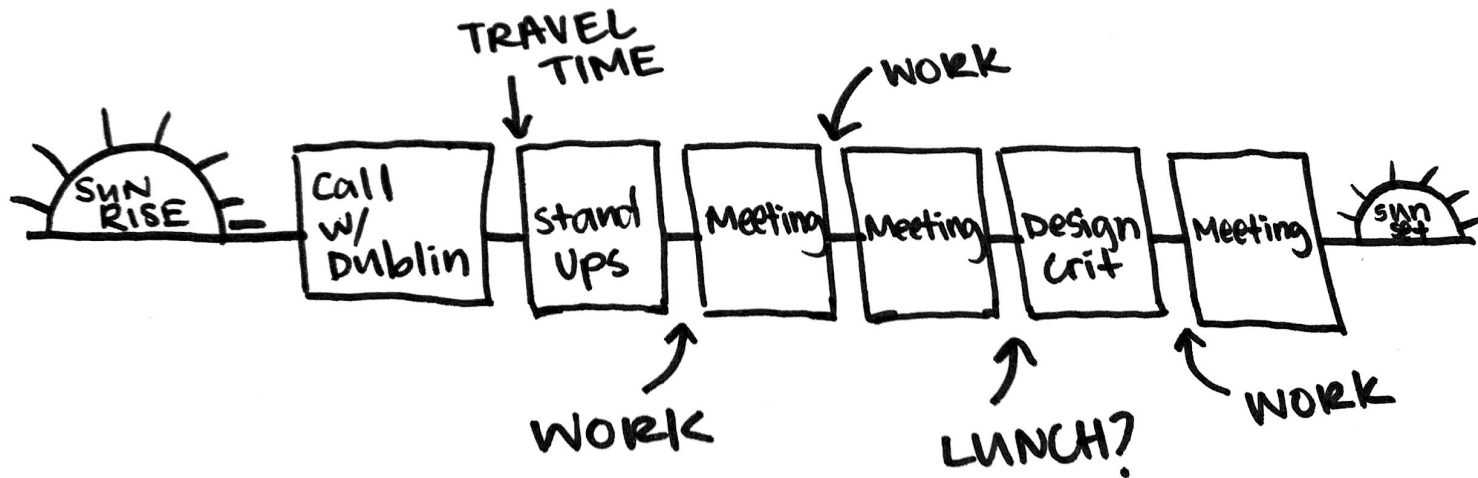

Raise your hand if ...

delicate

/ˈdɛlɪkət/

needing careful treatment,
especially because easily damaged

*You're going to need buy-in,
first.*

- The team

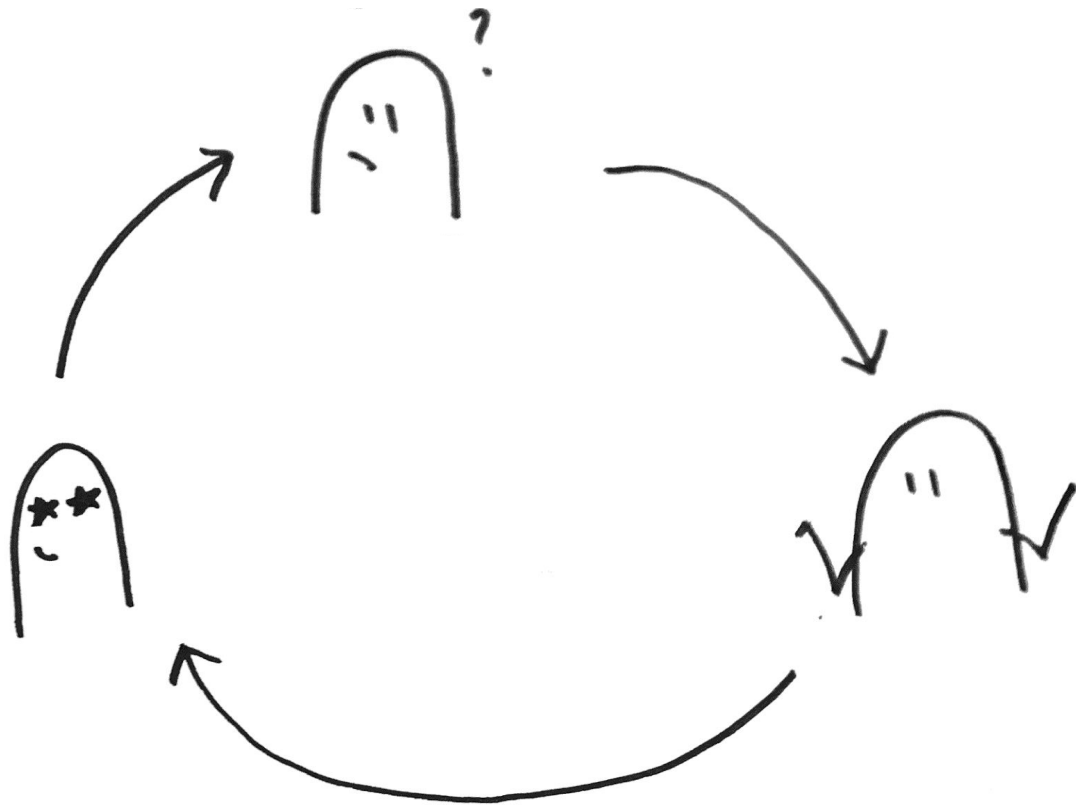

We need a structural change.

- The leaders

We need a culture change.

- Everyone

Real talk:

I quit because I believed I
couldn't change it.

My Mission:

Help teams believe they can
make change – regardless of
their job title.

01.

Bring leaders and
teams together.

02.

Identify what's
holding them back.

03.

Get them to try new
things, together.

The reality

These are the same
three things we hear
all the time.

Real talk:

We spend a majority of our time trying to **convince cynics** to “buy-in”.

“Inside every cynical person is a **disappointed idealist.**”

- George Carlin, American Comedian

Structural changes and re-orgs
are usually just **guesses** by
leaders.

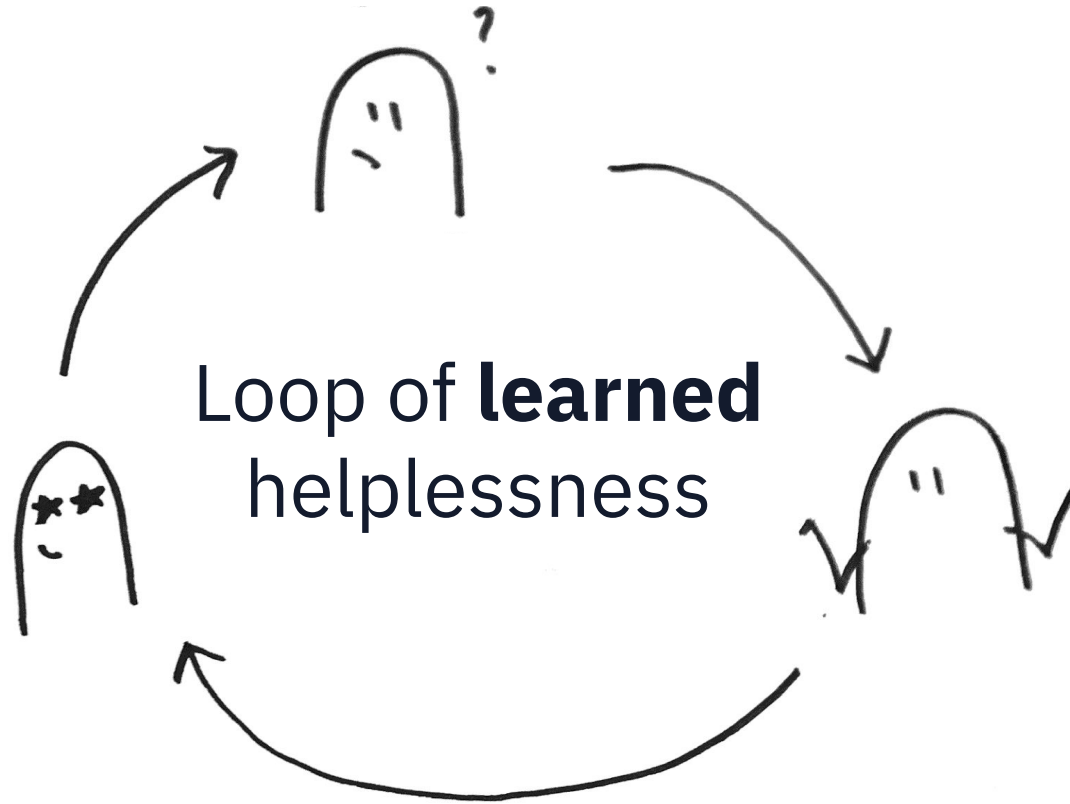

Culture =

- What you say and what is repeated
- What is said in the open
- What is said behind closed doors
- How you challenge each other
- How you motivate each other
- How you spend your money
- How decisions are made
- How success is celebrated
- When and how you respond to challenges

Diagnosing problems we
cannot solve leads us to feel
helpless.

A real example

Bring innovation to every day way of working – to deliver better outcomes to communities.

01.

Silos across the org

02.

Risk Averse

03.

Tried & gave up

04.

Change Fatigue

Why don't they understand?

- The change maker

You can't just inspire others to change, you have to **action it.**

Prototypes

Prototype:

Smallest idea you can test

High Impact

Idea

Idea

Idea

Low Influence

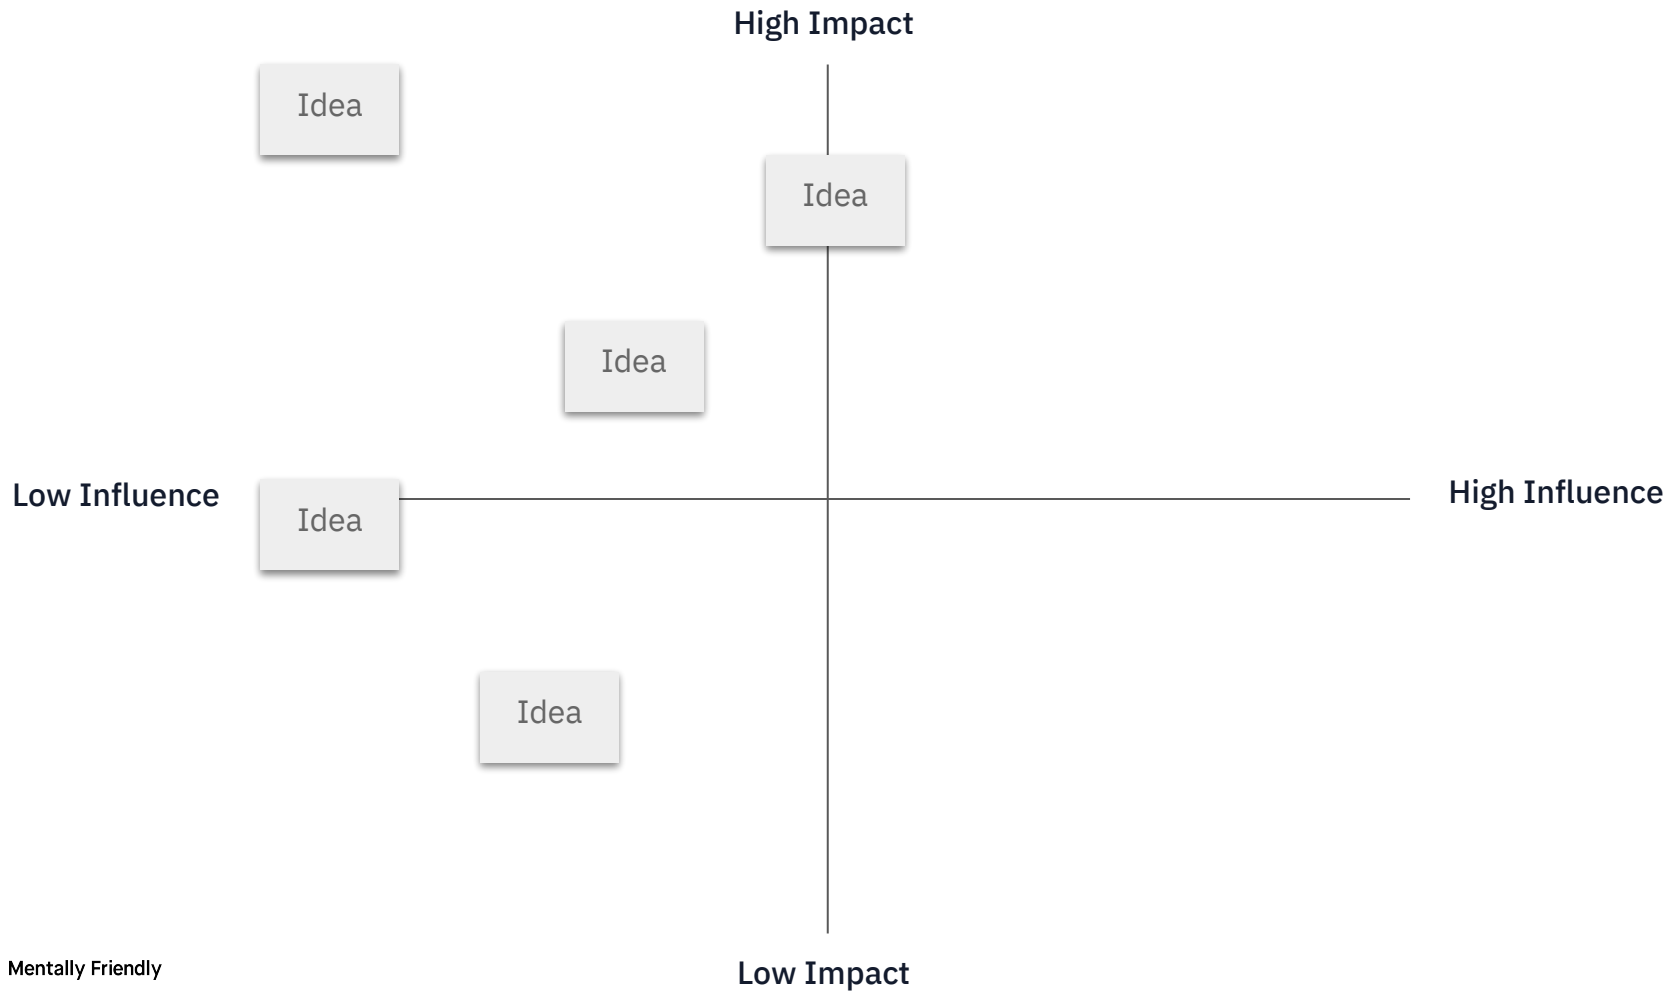

Idea

High Influence

Idea

Low Impact

Mentally Friendly

What is a prototype I can test
that is within **my influence**?

High Impact

Idea

PROTOTYPING
ZONE

Idea

Low Influence

Idea

High Influence

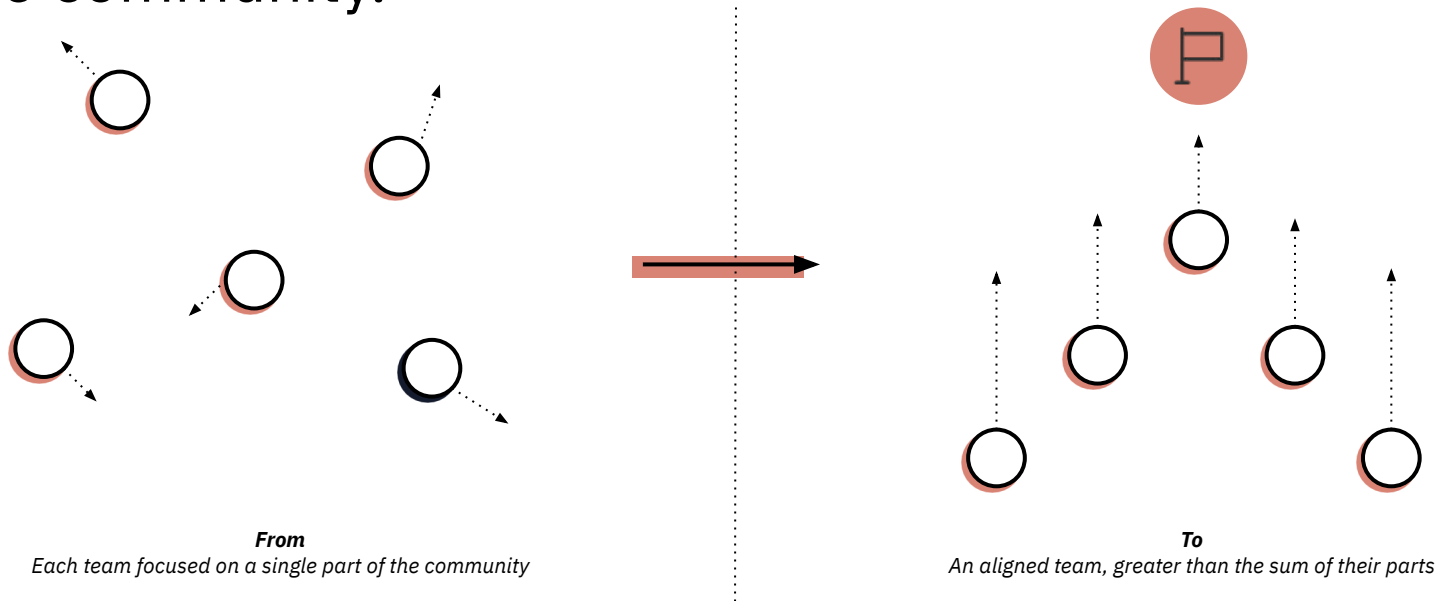

Idea

Low Impact

Mentally Friendly

By aligning a cross-functional team around the community instead of our departments, we can better serve the needs of the community.

The Prototype

The cross-functional team met once a week for just one hour and after 4 weeks identified **real community problems** and impactful solutions.

Mentally Friendly

*This is the first time in 15 years I have
experienced the value in working this
way.*

- The previous cynic

Impact

=

- A new motivated team
- Success shared through word-of-mouth
- Showcased “innovation” through practice
- Gained approval to continue working cross-functionally
- Executed 3 ideas, together.

Prototypes give you permission
to try something different to
learn something new.

Advice to my younger self

Don't try to solve
problems for the
entire organisation.

Advice

Focus on making
change for your team,
first.

**“They just don’t
understand.”**

Advice

Convince cynics by
showing them.

Creating change is
really, really, really hard.

resilience

/ˈdɛɪlɪkət/

learned persistence

Don't just wait for change
to happen to you—

– make change happen
because of you.

Thank you.
