

Unlocking collaboration

A framework for developers and designers

Alicia Calderón González

Wey Wey Web Conference 2023

Who is responsible for how good is the UI?

We care about our practice

We care about UIs & products

Great products or UIs do not
happen without collaboration

In other words...

We kind of need to get along

Easier in theory than in practice

A series of three horizontal yellow scribbles or brushstrokes located below the text 'Easier in theory than in practice'. The top scribble is a simple horizontal line, the middle one is a slightly thicker, more textured line, and the bottom one is a long, thin, slightly curved line.

Look mum,

I made a framework

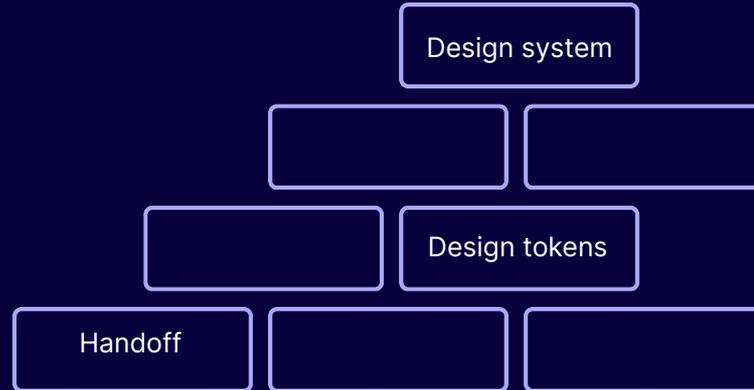

Design system

Annotations

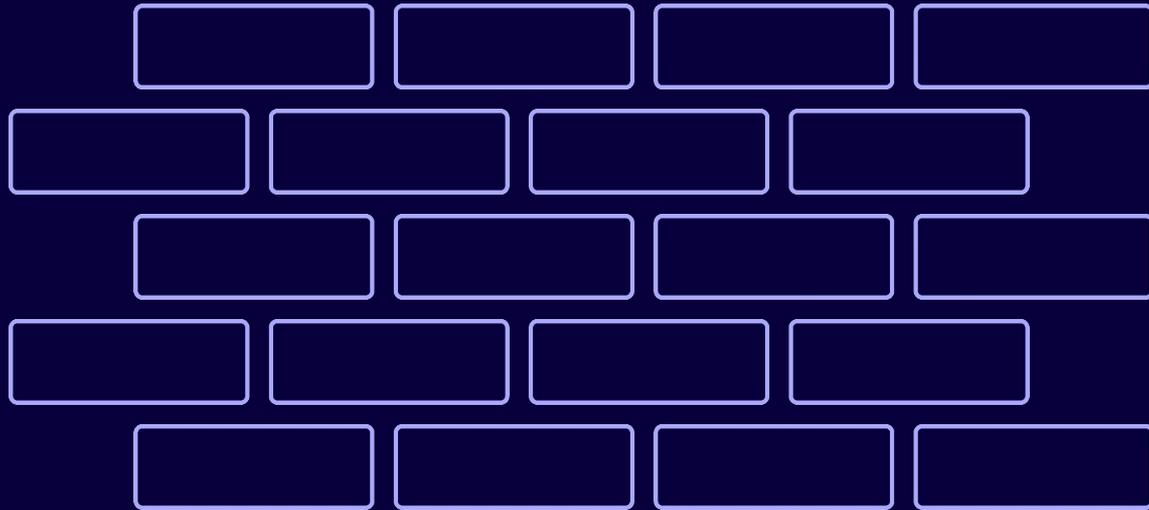

Design tokens

Handoff

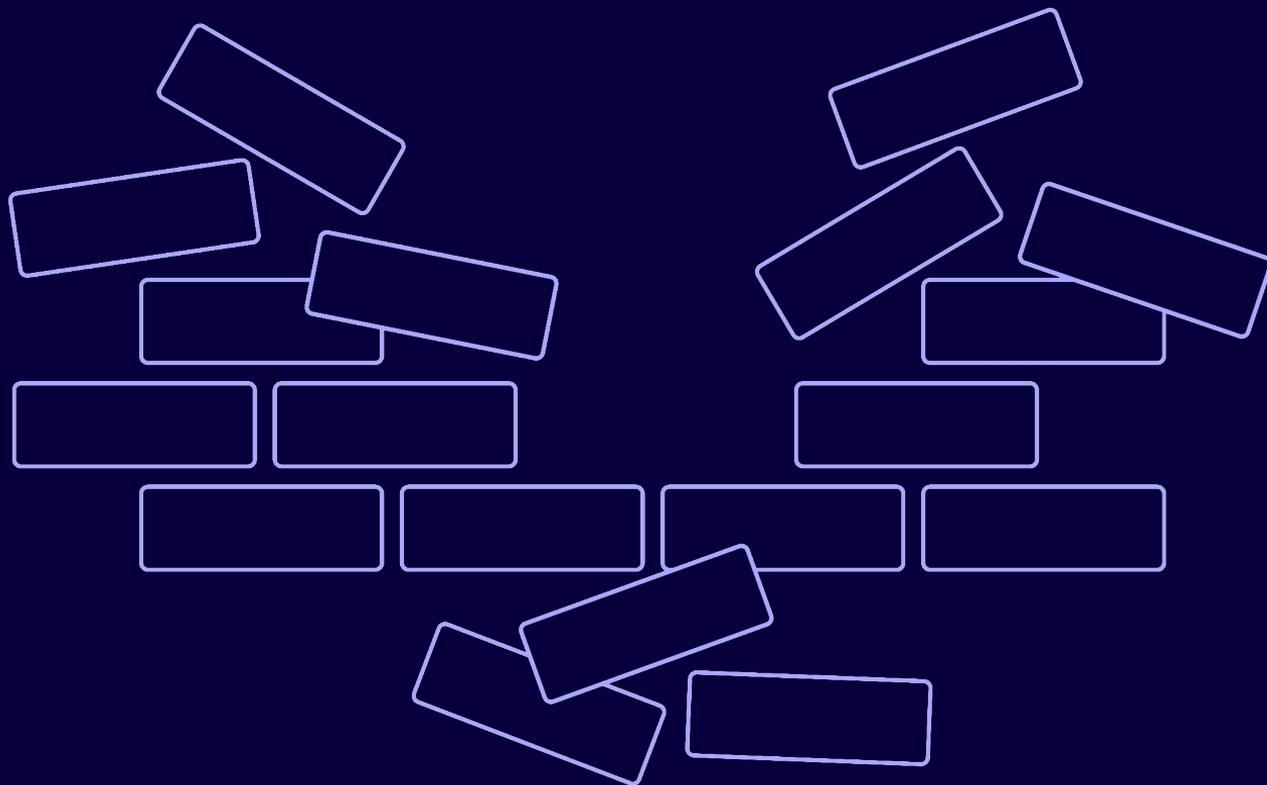

Some collaboration building blocks

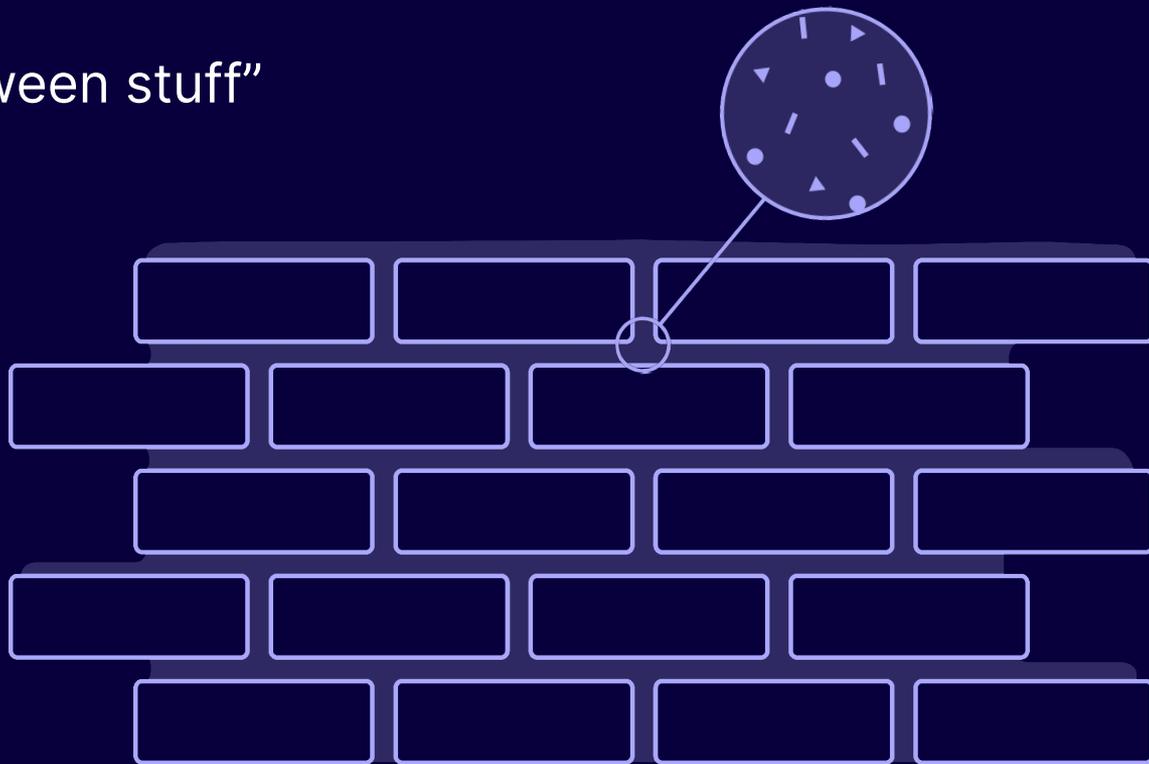

Just a bunch of bricks piled up, not a structure

All bricks, no mortar

The “in-between stuff”

What does it take to
collaborate?

A collaboration framework

Communication

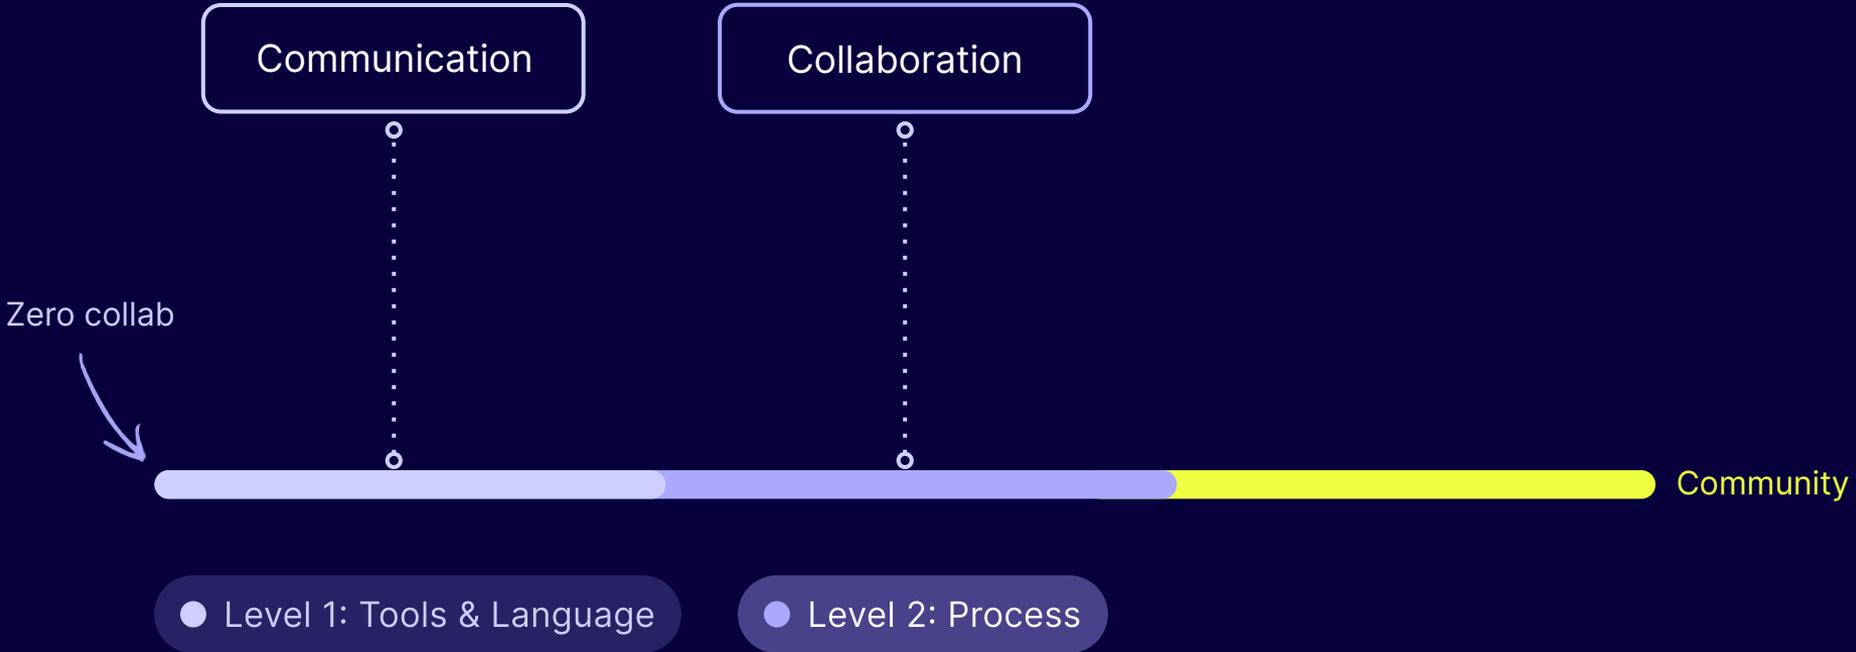

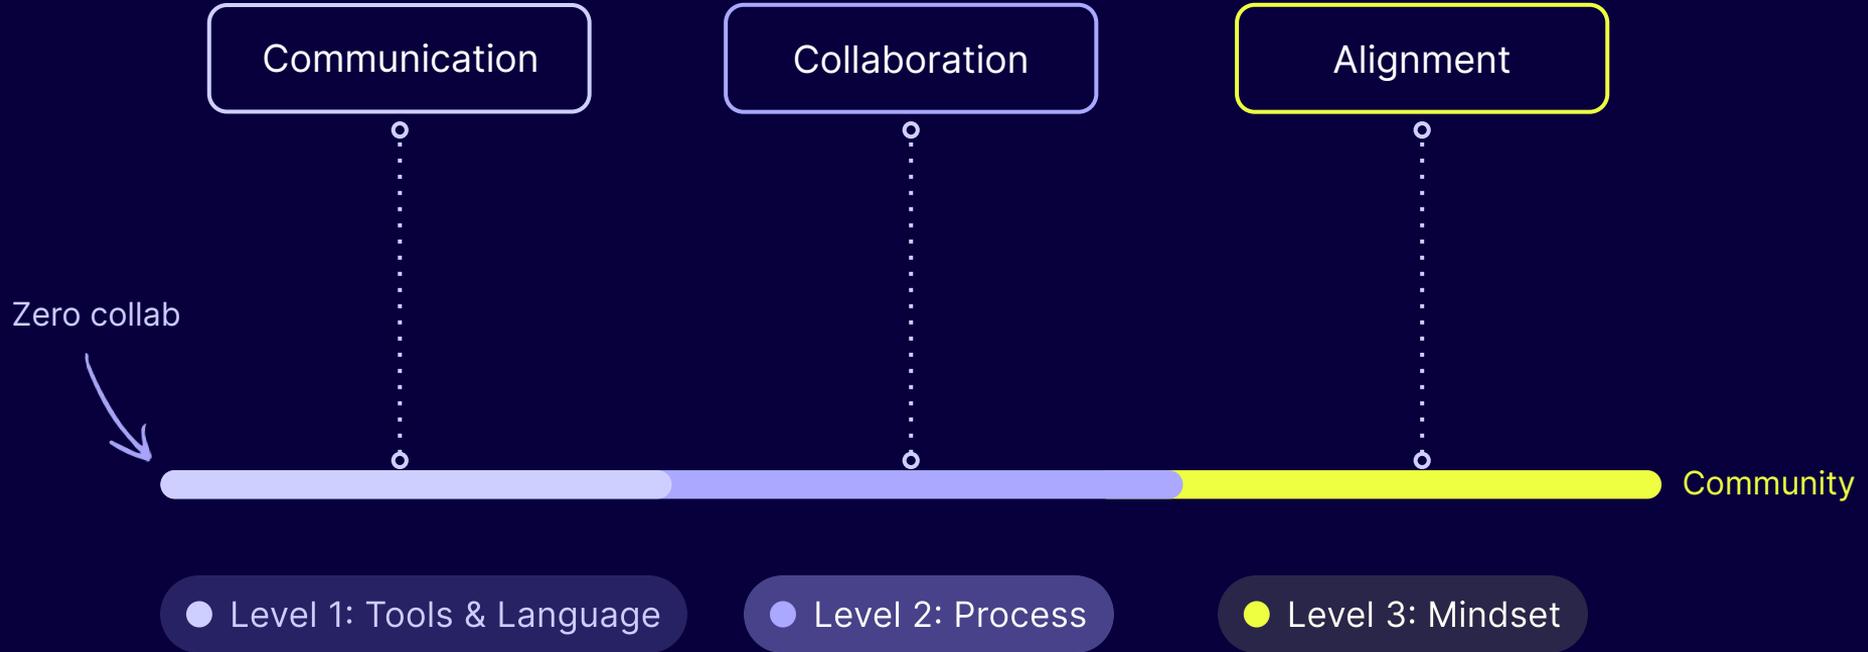

Zero collab

Community

● Level 1: Tools & Language

How can you implement this framework?

Level 1

Tools & Language

- Level 1: Tools & Language

Before collaborating, we need
to start communicating

● Level 1: Tools & Language

Common spaces

Translations

Shared language

- Level 1: Tools & Language

Common spaces

Software tools

● Level 1: Tools & Language

Common spaces

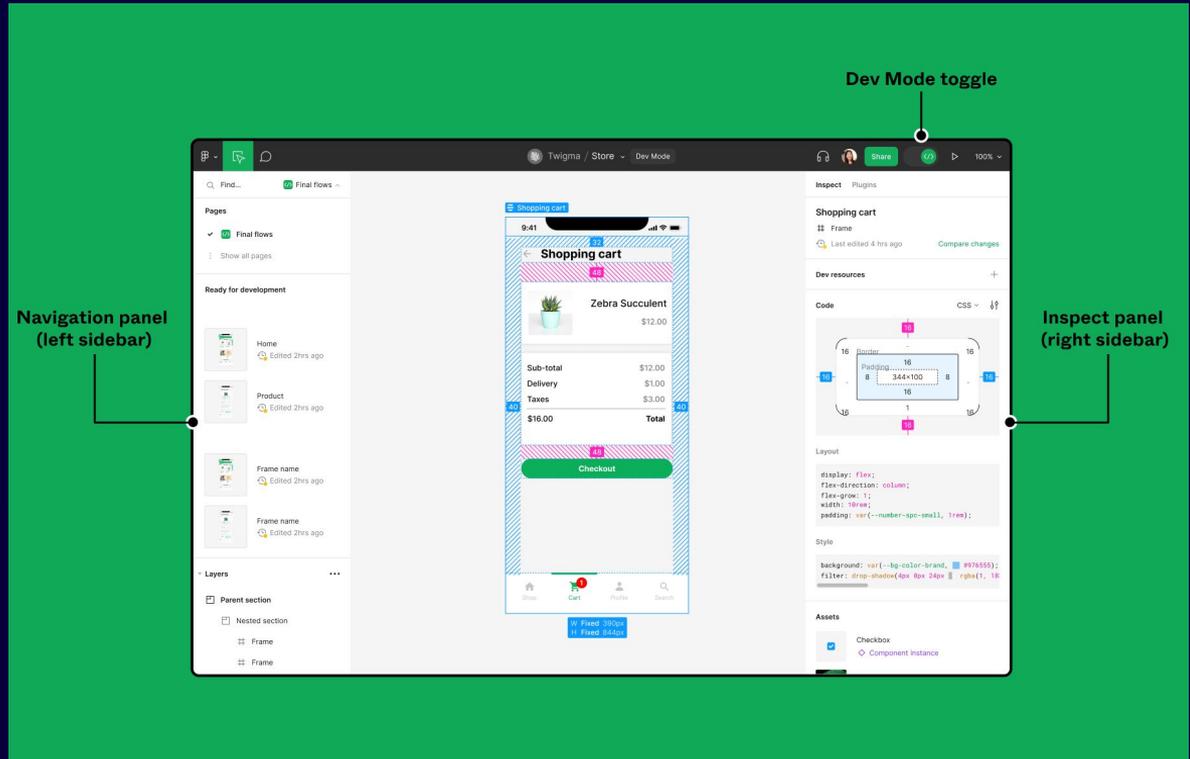

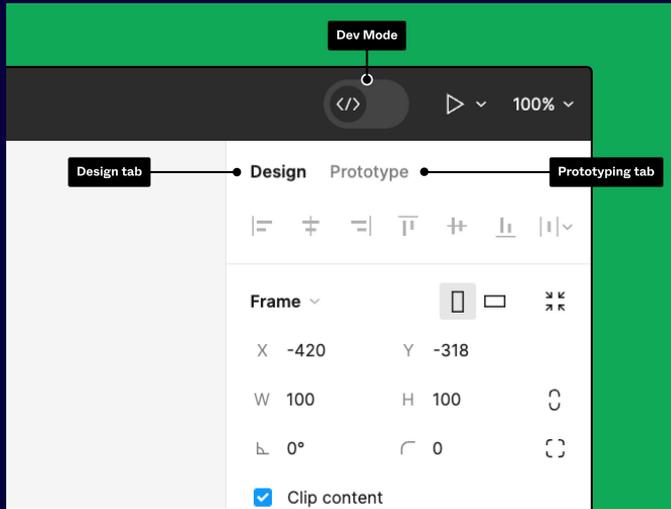

- Level 1: Tools & Language

Translations

Software tools

Images from help.figma.com “Design, prototype, and explore layer properties in the right sidebar”

● Level 1: Tools & Language

Common spaces

+

Translations

The Design file

- Level 1: Tools & Language

Great tool, or
collaboration nightmare

- Level 1: Tools & Language

Designer, think of the developer
as the user of your design file

● Level 1: Tools & Language

Shared language

Naming conventions

Design tokens

● Level 1: Tools & Language

Design tokens

● Level 1: Tools & Language

Shared SSOT

Design tokens

Design system

Shared ticket & requirements

● Level 1: Tools & Language

This is just a preview

● Level 1: Tools & Language

Make it work for *your* team

● Level 1: Tools & Language

To start communicating...

We need tools that bridge the gap
between disciplines

● Level 1: Tools & Language

Common spaces

Translations

Shared language

● Level 1: Tools & Language

Shared SSOT

Common spaces

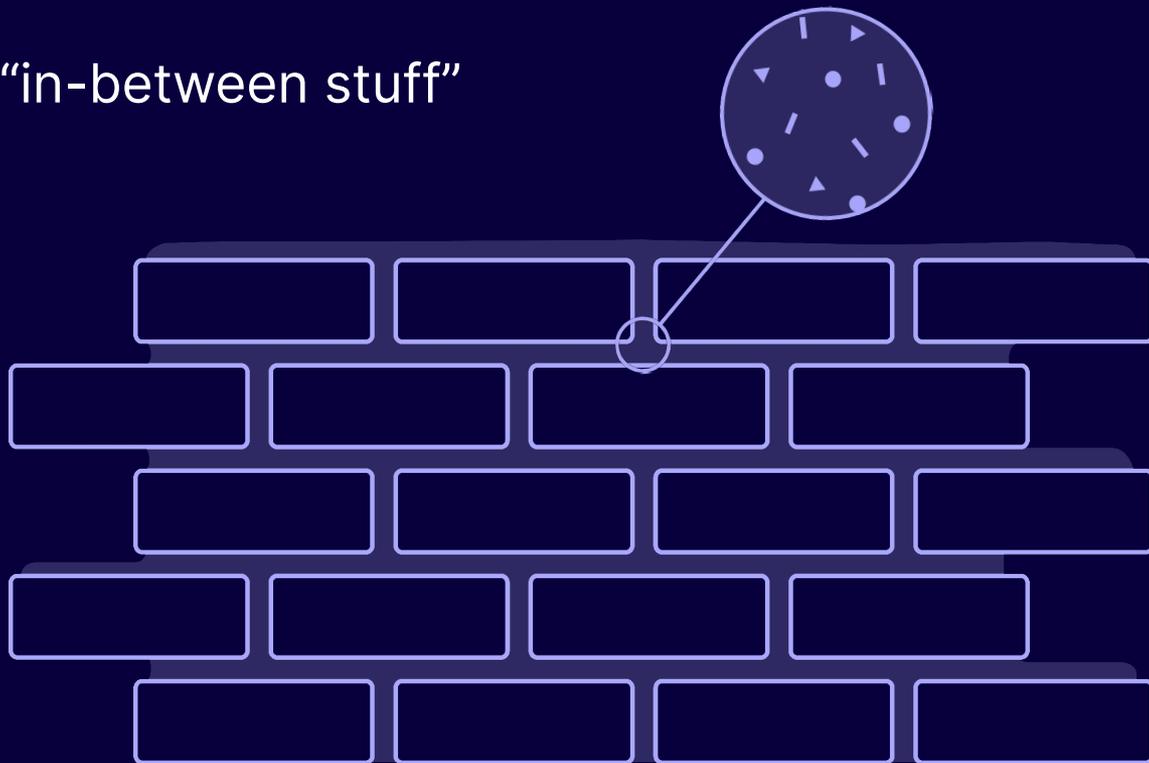

Translations

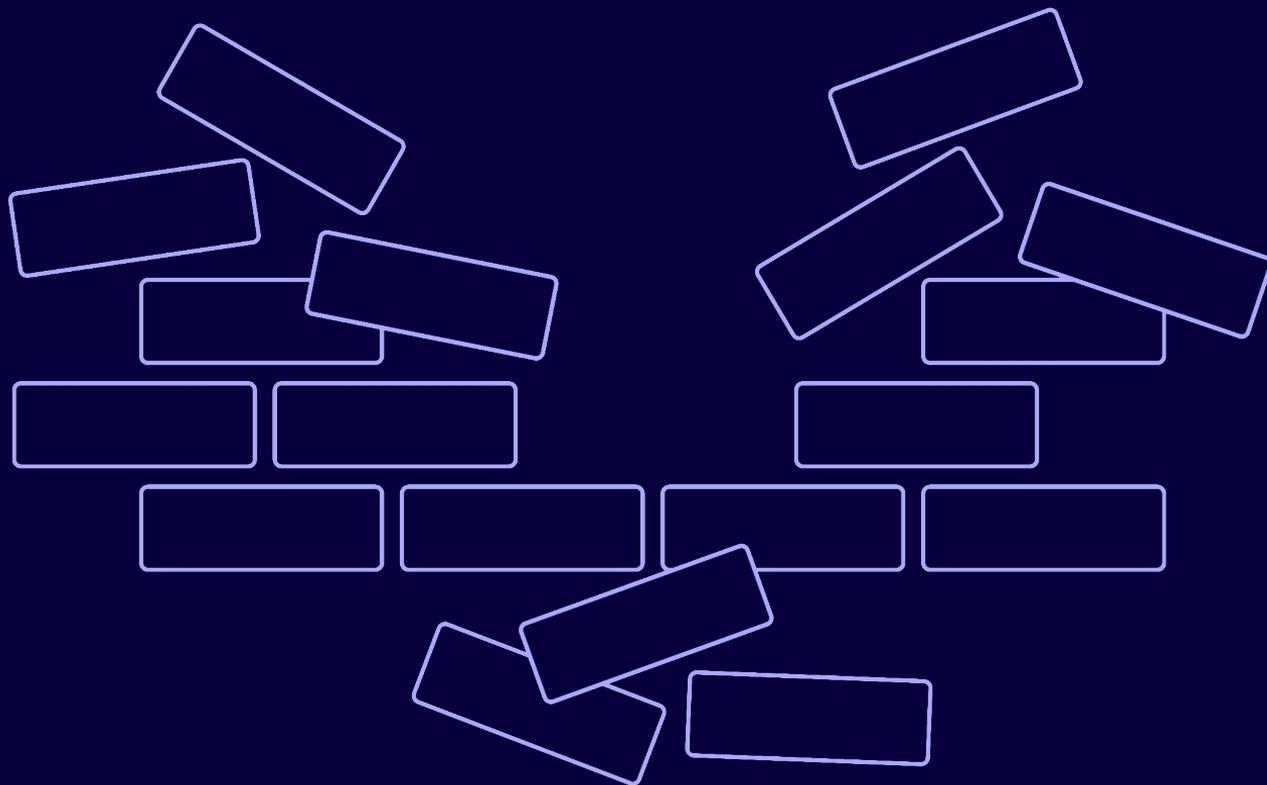

Shared language

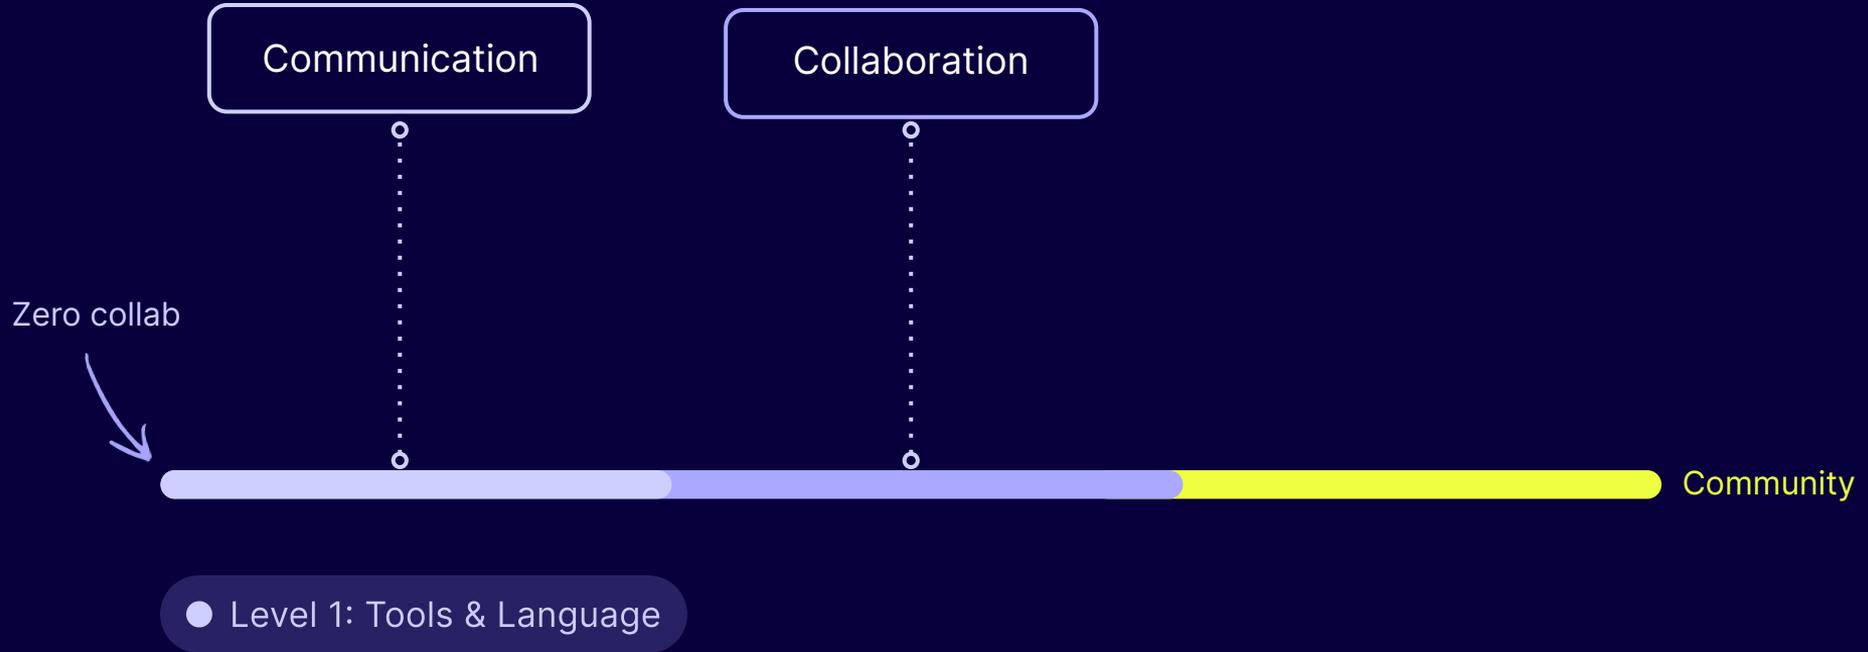

Without the “in-between stuff”

The structure falls flat

What does it take to go from
communication to collaboration?

How can we work together if the process makes us work apart?

The Design Handoff,

The Design Handoff, the collaboration fallacy

Dear developer,

Find here the link to the
design file. Any questions?

Good luck!

Alicia

A meeting at best,
a simple transfer at minimum

Design Handoff

Design Process

Development Process

“A lot of times developers are not collaborative not by choice, but by how the process involves them, in waterfall or agile they are last in mind, thought of as implementers as best, you get handed what design produces and just crank it out, and if there are any issues with it just shut up and do your job!”

Brad Frost on Design Better Podcast (Brad Frost and Dan Mall: Rethinking Agile and how designers collaborate with developers)

If we want to start *collaborating*,
we need to work together under
a shared process

Level 2 Process

● Level 2: Process

- * Involve developers from the beginning, and earlier
- * Share product decisions

● Level 2: Process

● Level 2: Process

Project scoping

Start

Before
(it starts)

Beginning

During

Near the end

Delivery

● Level 2: Process

Project scoping

Alignment before the start on the problem to solve & scope, the requirements and feasibility considerations

● Level 2: Process

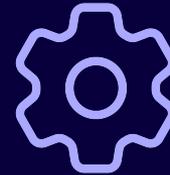

Project scoping

Problem

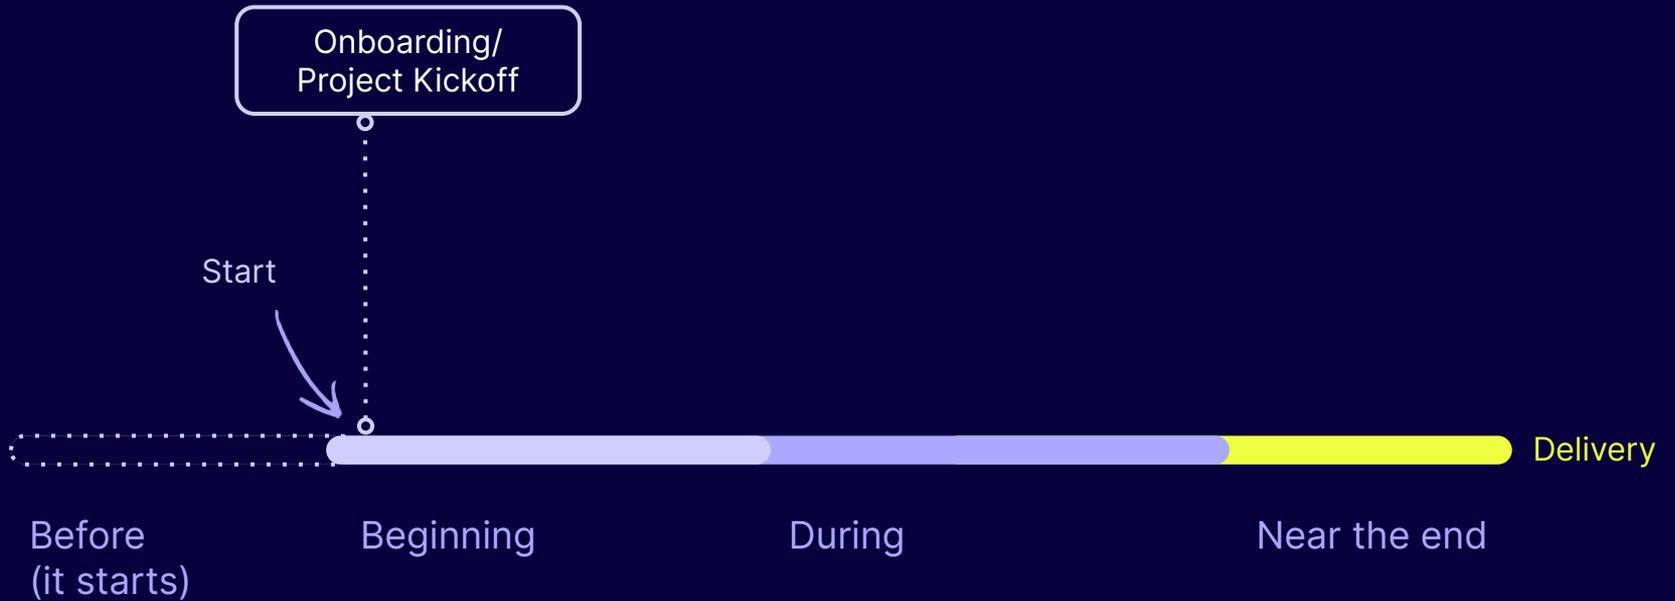

Requirements

Feasibility

● Level 2: Process

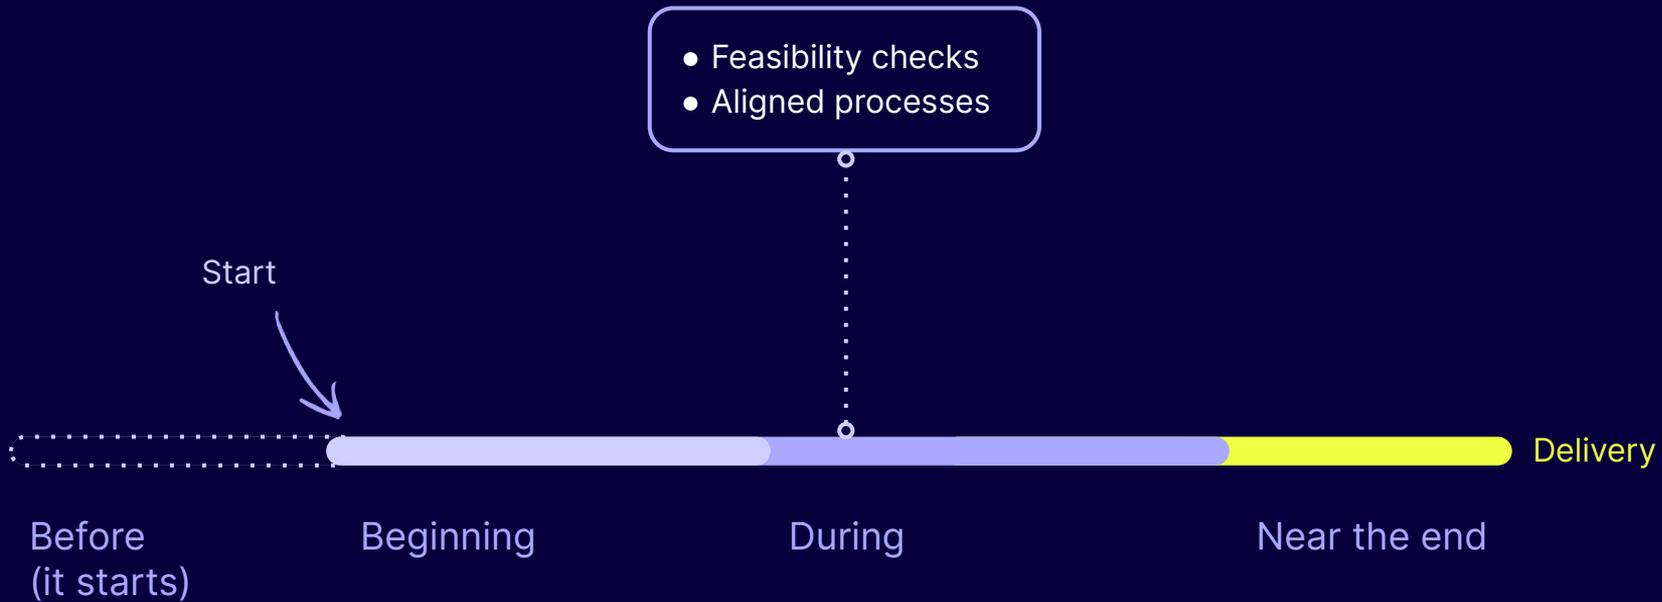

● Level 2: Process

Onboarding/ Project Kickoff

Agree on shared goals, confirm the requirements and timeline, dependencies and collaboration specifics

● Level 2: Process

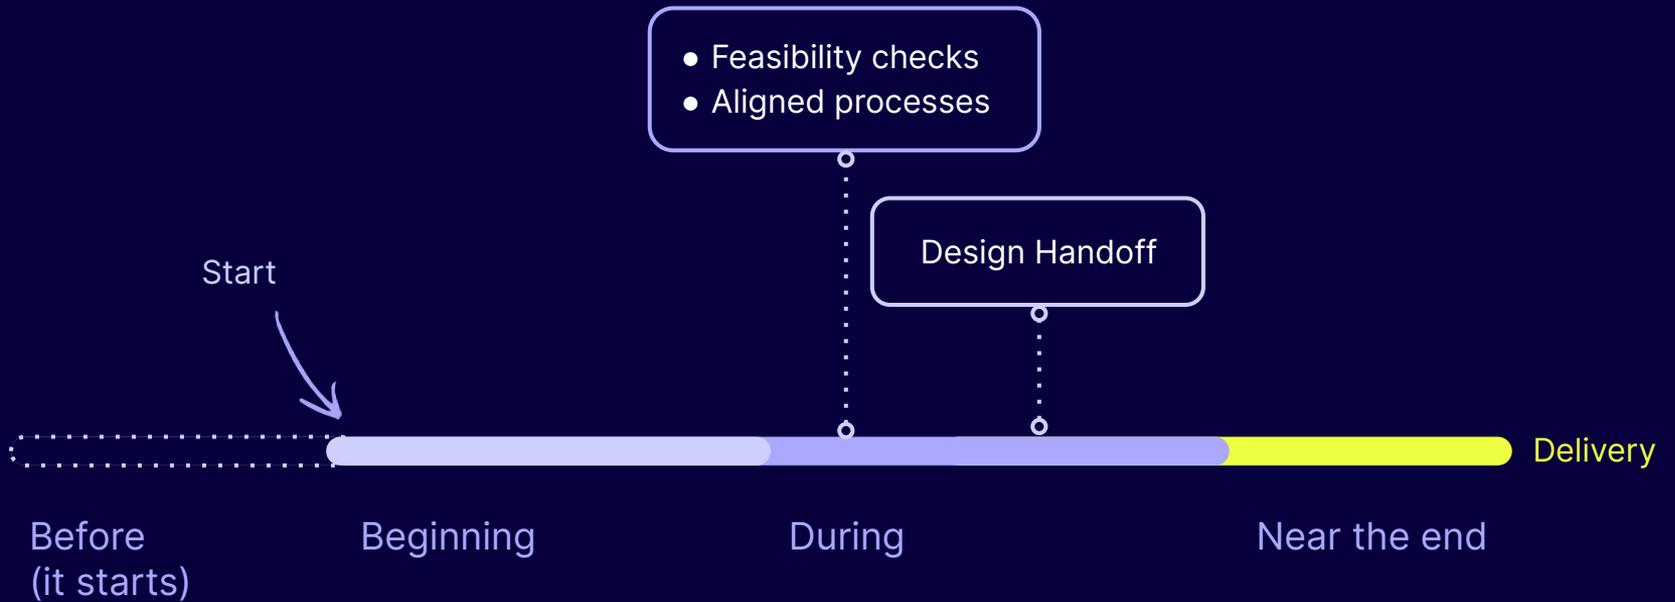

● Level 2: Process

Feasibility checks

Have conversations about the design's feasibility from the exploration phase onwards & share product decisions

● Level 2: Process

Explain where your design choices come from: what was the problem you were trying to solve, the reason you solved it like that, and the intended impact of it

● Level 2: Process

● Level 2: Process

Design QAs

Designers have to be involved with the development process by doing Design QAs

● Level 2: Process

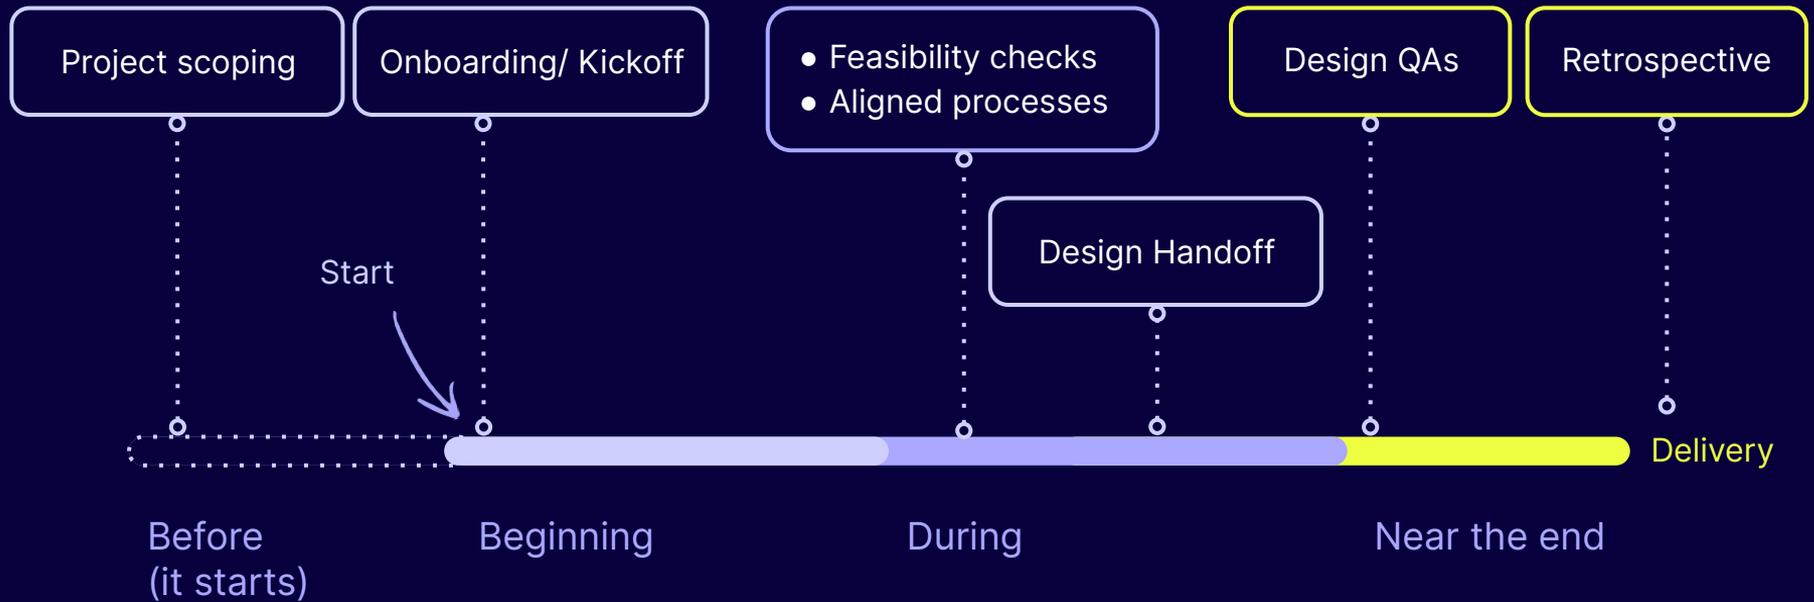

● Level 2: Process

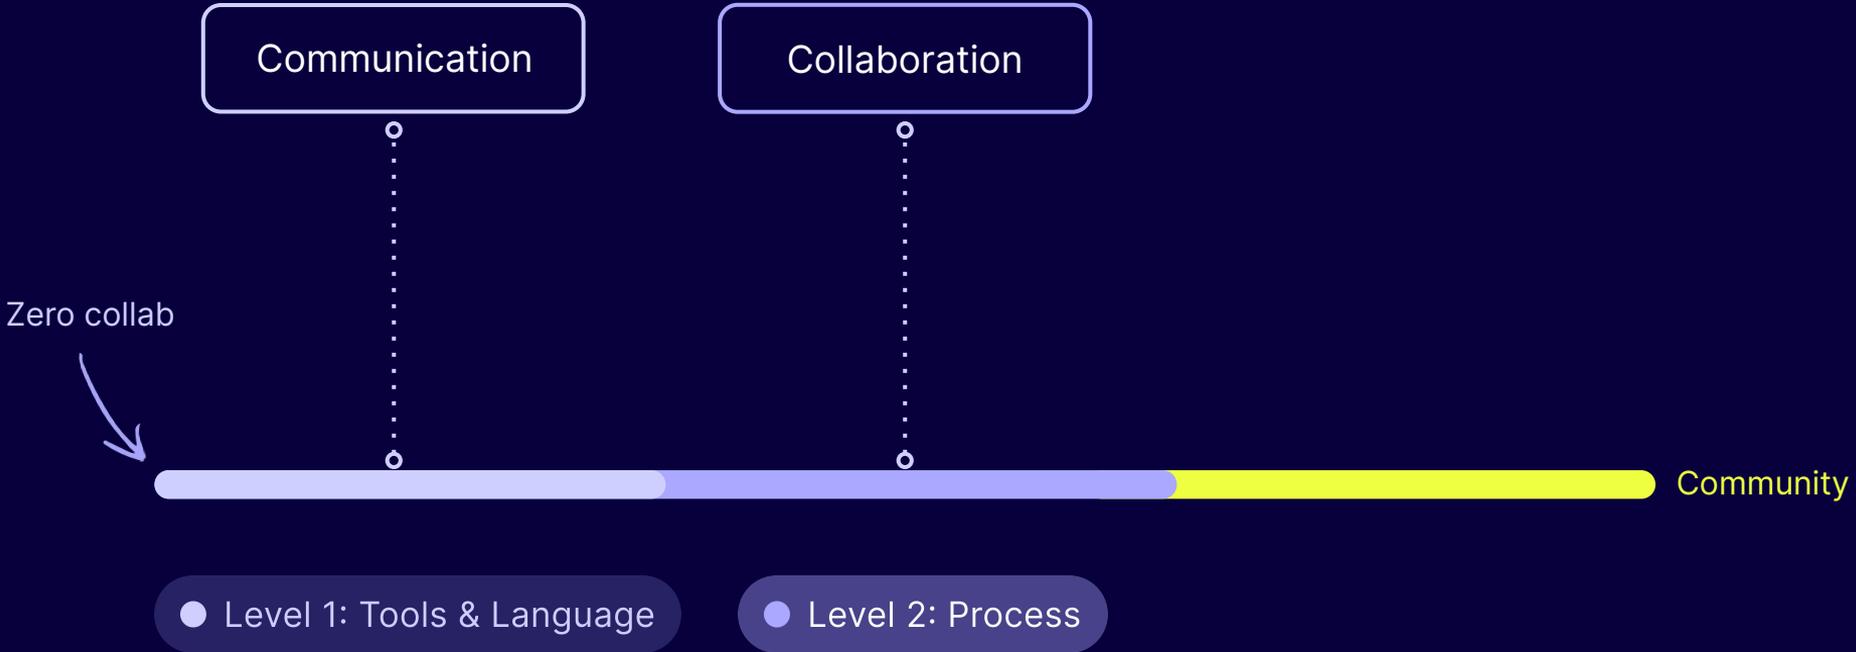

Retrospective

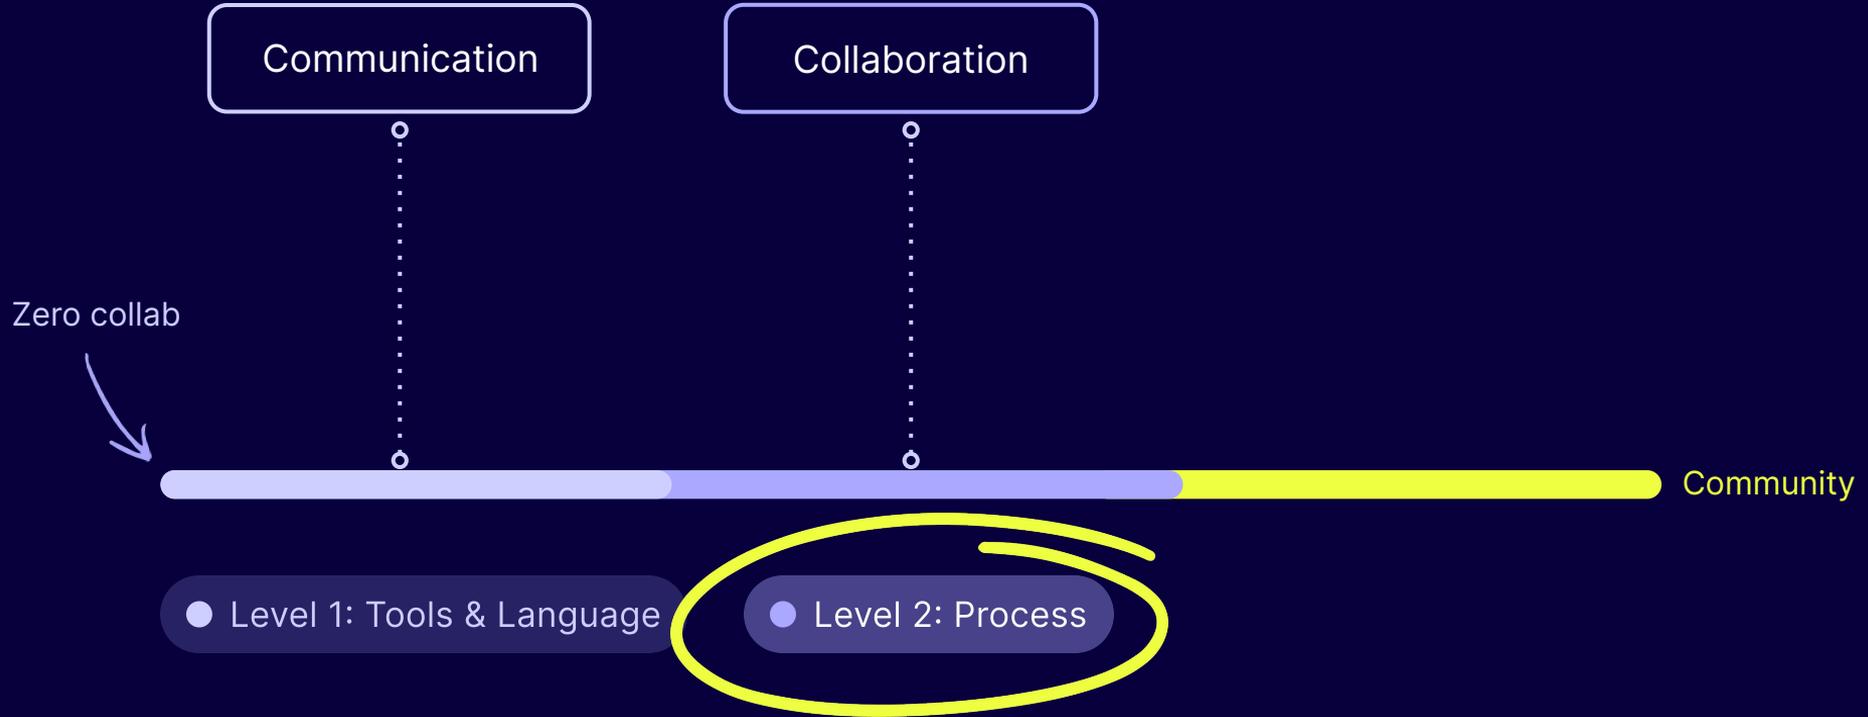

Reflect as a team on what worked well,
what you've learned and what needs to
change... and review the collaboration

● Level 2: Process

What does it take to go from
communication to collaboration?

● Level 2: Process

It's about aligning under one
process: building the product
together

● Level 2: Process

Shared goals, shared meetings
and shared product decisions

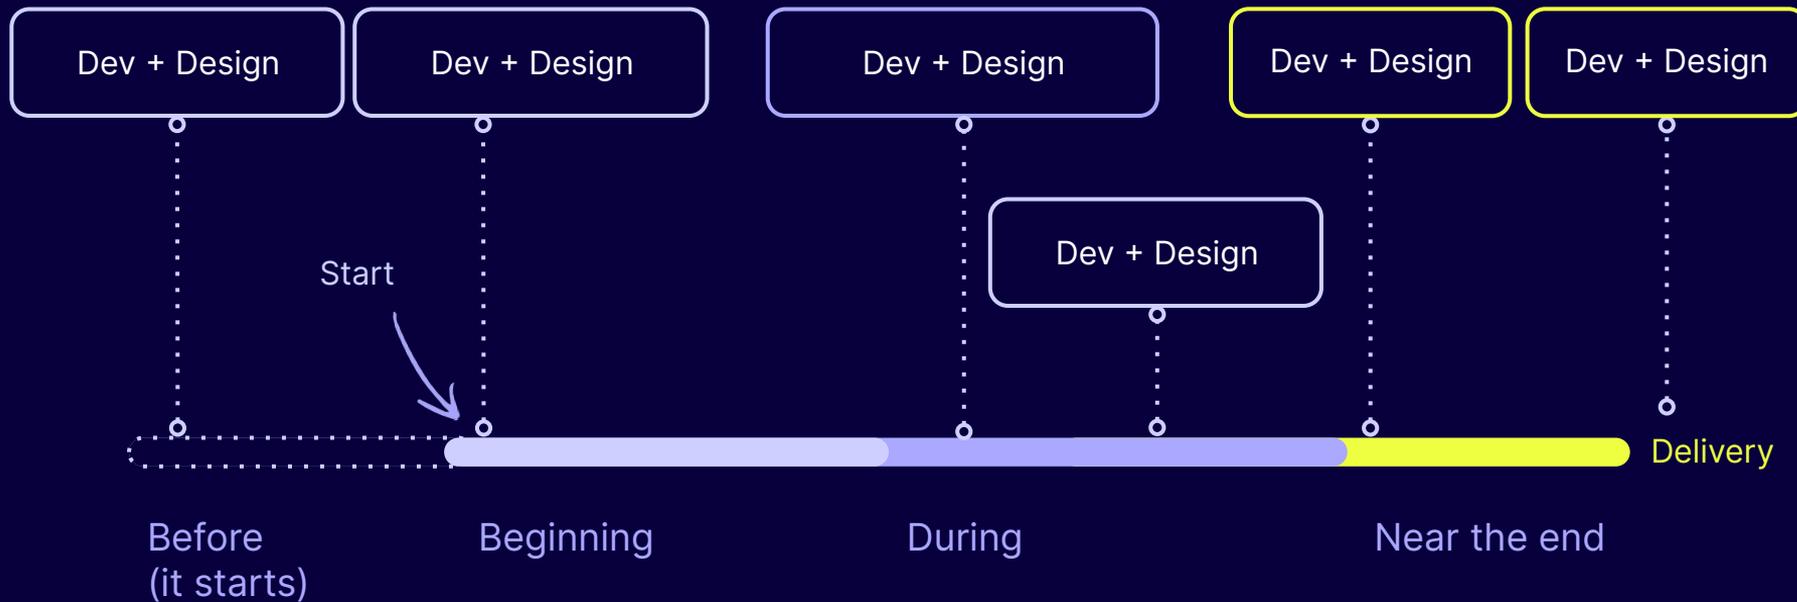

It's definitely not about
how many meetings...

Who is involved in these

When these happen

What is done in the meetings

● Level 2: Process

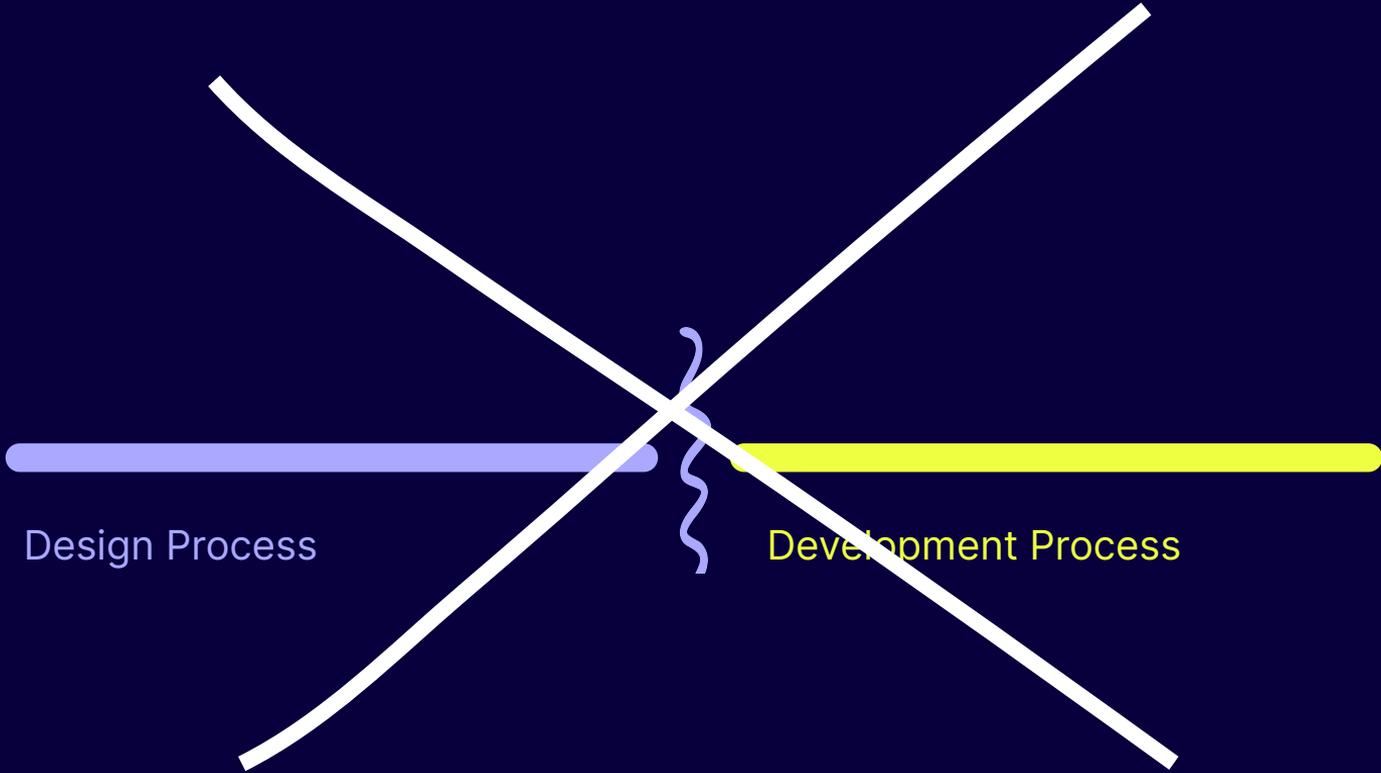

Design Process

Development Process

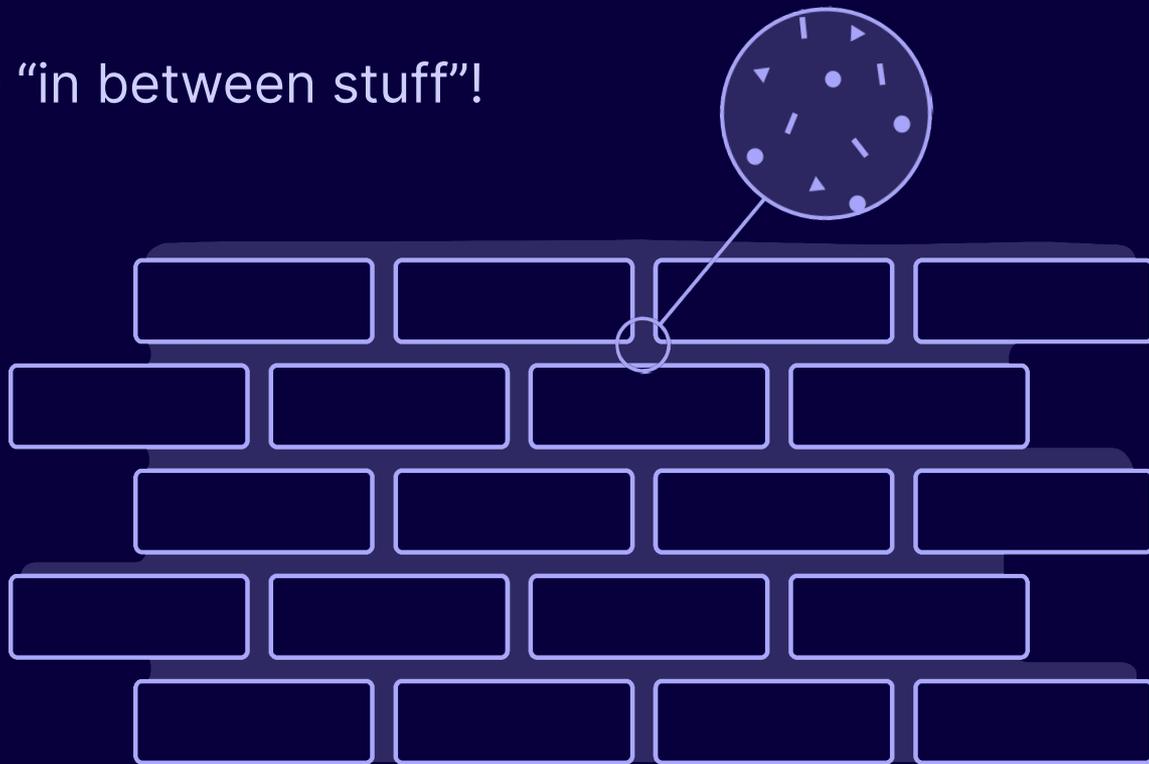

Design Process

Development Process

That said, here are some
shortcomings

We have the “in between stuff”!

To framework,
or **not** to framework

Level 3

Mindset

● Level 3: Mindset

The collaboration mindset

● Level 3: Mindset

* Share the ownership

● Level 3: Mindset

* Respect each other's craft

* Be willing to make compromises

● Level 3: Mindset

* Stay curious & open to learn

● Level 3: Mindset

* Put in the work and get to know each other

● Level 3: Mindset

- * Share the ownership
- * Respect each other's craft
- * Be willing to make compromises
- * Stay curious & open to learn
- * Put in the work to get to know each other

● Level 3: Mindset

Some specifics per discipline

● Level 3: Mindset

😊 Designer

* Engage with the technical aspects of your work

● Level 3: Mindset

😊 Designer

* Guard fidelity, but
acknowledge its limitations

● Level 3: Mindset

😊 Designer

* Facilitate the collaboration
and adapt your process

● Level 3: Mindset

😊 Developer

* Connect your work to the product level

● Level 3: Mindset

😊 Developer

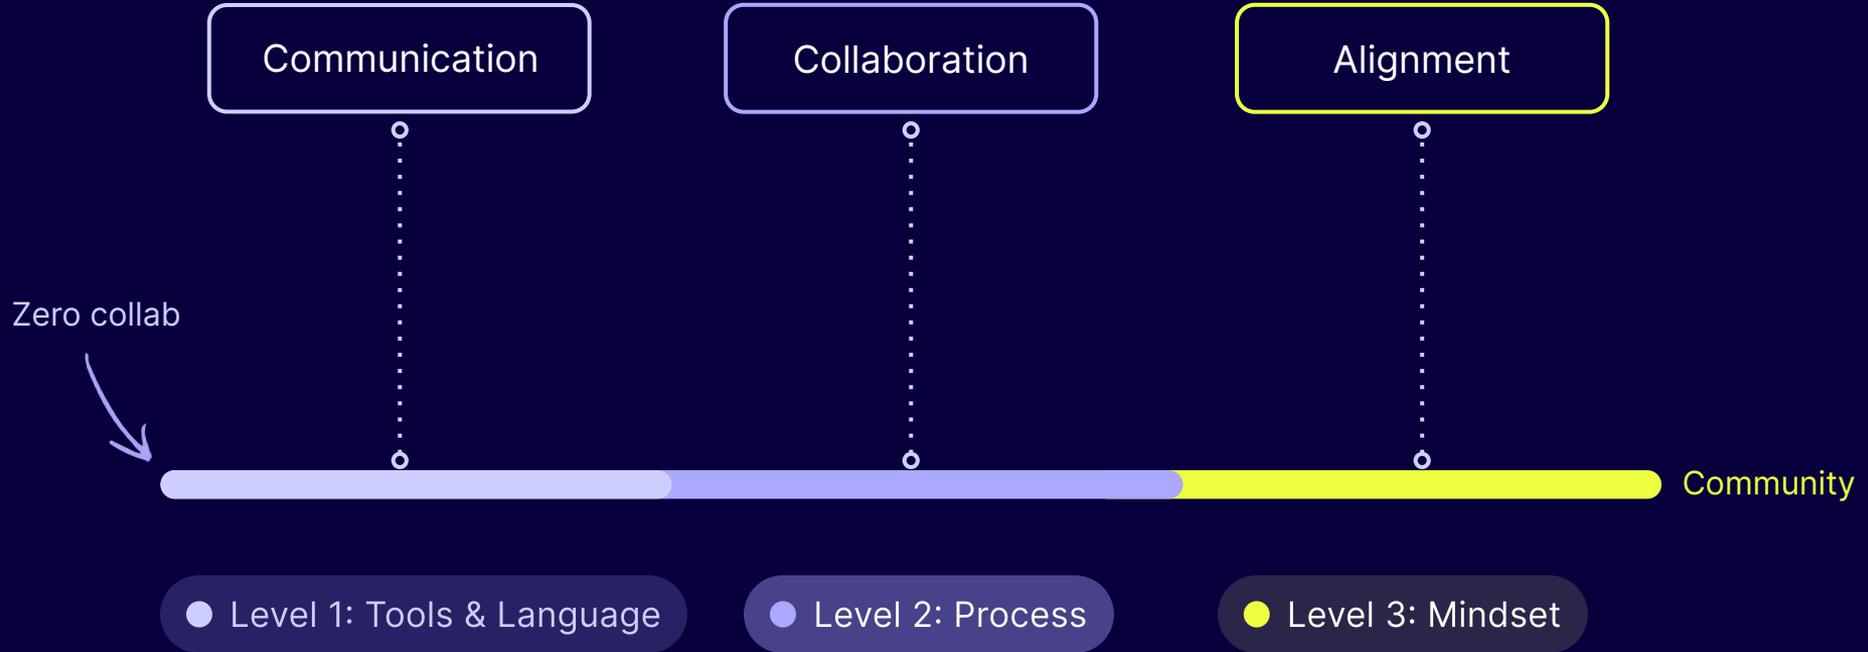

* Guard the feasibility, but
explain yourself in the process

● Level 3: Mindset

😊 Developer

* Take ownership of design translation tools

What does it take to
collaborate?

What to do at Ops level:

- Set up effective shared communication spaces
- Document collaboration best practices
- Conduct regular retrospectives
- Promote a culture of curiosity and continuous learning
- Foster shared ownership and understanding of goals
- Hire with team-building in mind

My *takeaway* from this
collaboration framework

Thanks!
