

Designing for Everyone: Building Great Web Experiences for Any Device

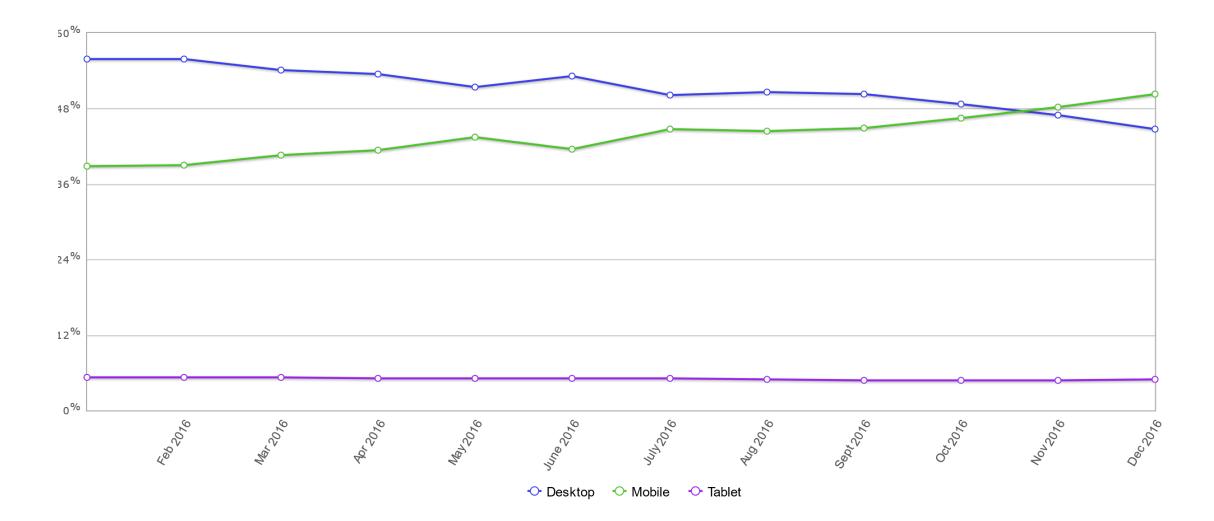

Aaron Gustafson

# In October of 2016, mobile ate the desktop...

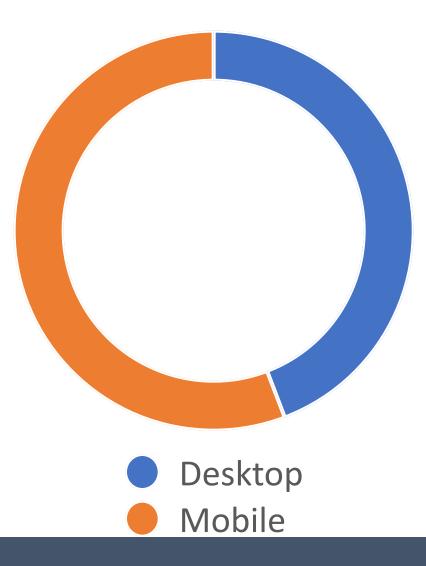

### Mobile traffic overtakes desktop globally

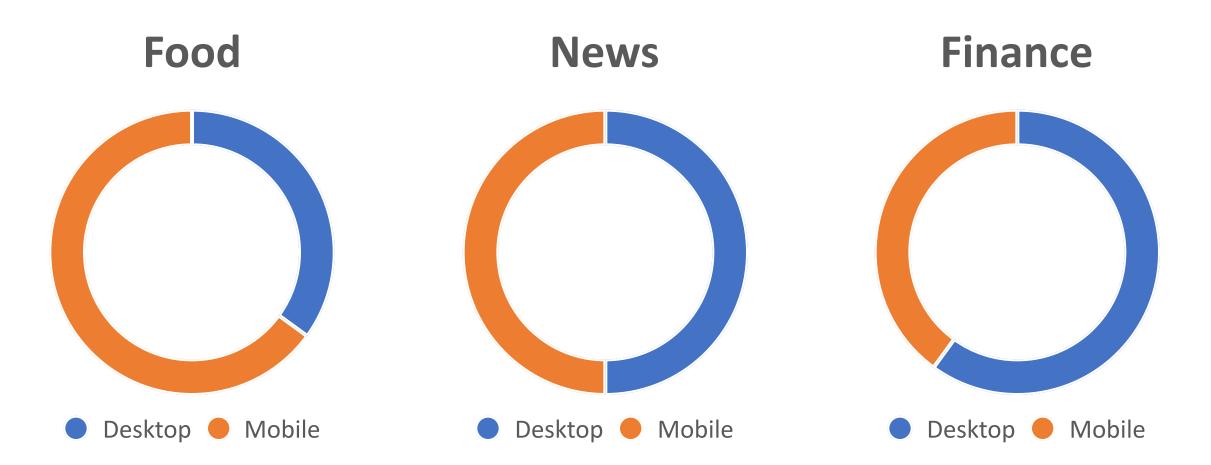

https://aka.ms/desktop-v-mobile-2016

### Mobile accounts for 56% of all traffic\*

\*Based on 77 billion website visits.

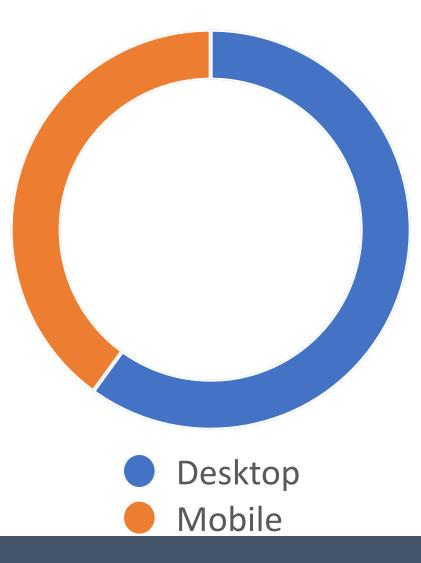

### But the numbers differ by industry

### Desktop users spend more time on sites (60%)\*

\*Based on 39 trillion seconds.

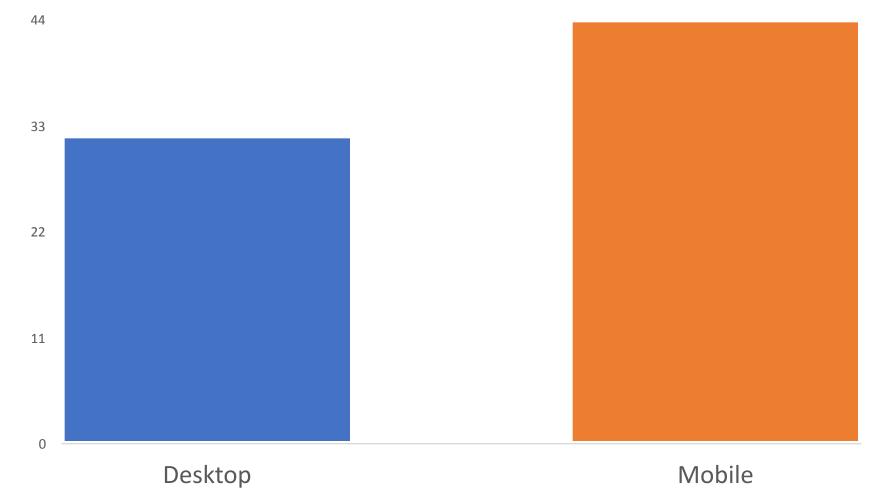

Anywhere from 10-300%

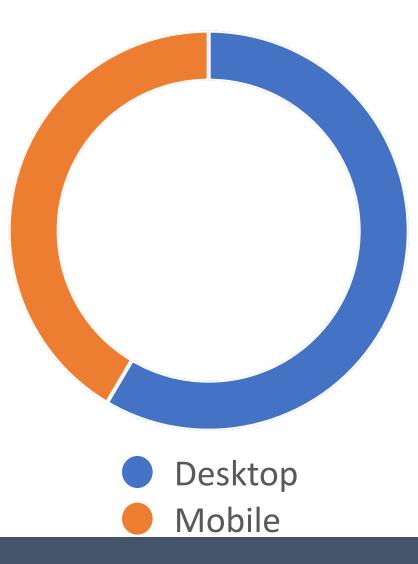

### Bounce rates on mobile are 40% higher than desktop\*

### \*Based on 584 billion page views.

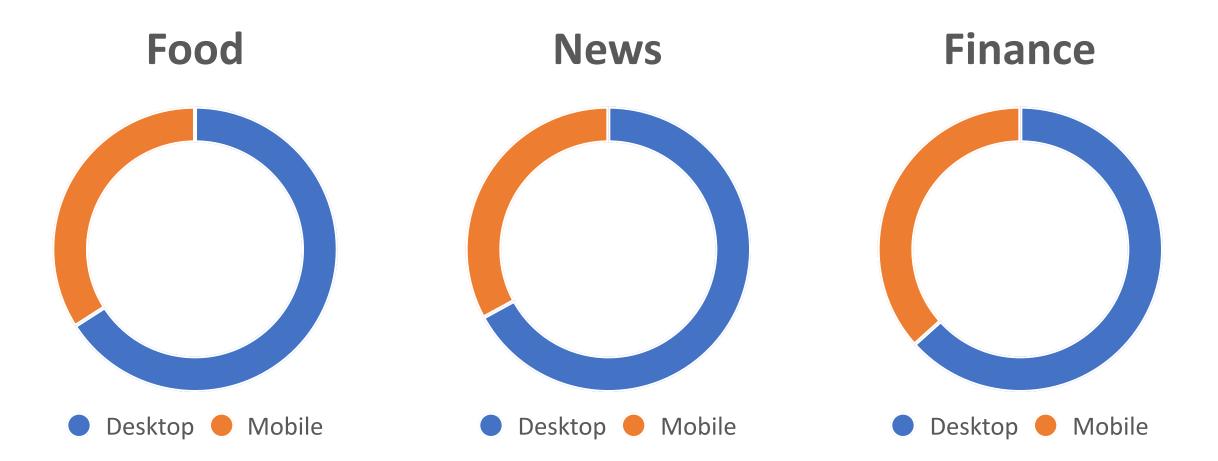

### Desktop users view more pages (59%)

\*Based on 584 billion page views.

### Anywhere from 1.5x to 3x more pages per visit

## The "desktop" experience matters

 $\leftarrow$ 

 $\times + \vee$ () keneshabanks.com/blog

# Web browsing is the #1 user activity on PCs

**Pops of Metallic** June 18, 2017

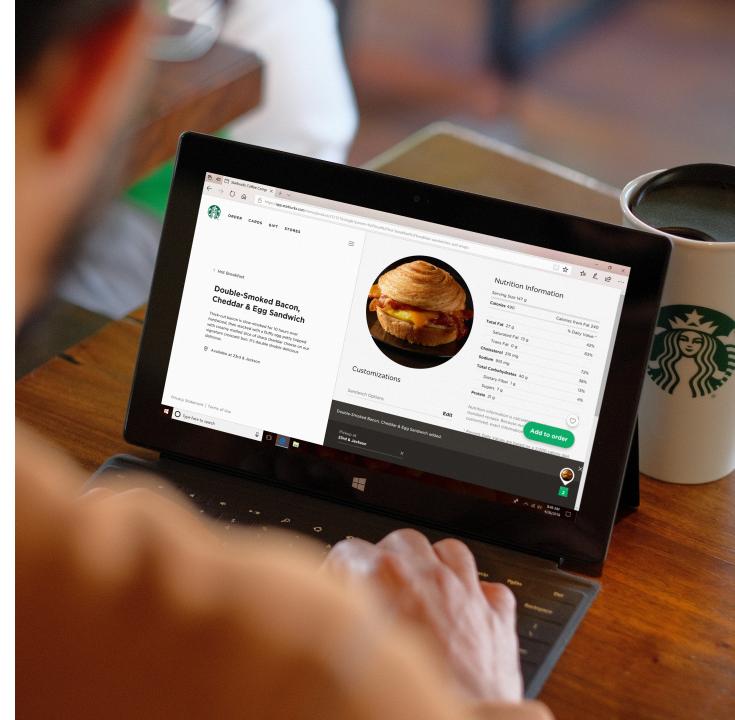

**K.** 

### The "desktop" experience matters, even for Progressive Web Apps

40% of Order Ahead transactions on the Starbucks PWA come from desktop

Katarzyna Ostrowska <u>[0]</u>

Carnival Cruise Line saw a 16% opt-in for Push Notifications on desktop

https://aka.ms/carnival-pwa

We believe the web can (and should) reach beyond the browser, which is why we are so heavily invested in making PWAs successful on Windows PWAs start with a great web experience and then enhance that experience for performance, resilience, installation, and engagement

PWAs start with a great web experience and then enhance that experience for performance, resilience, installation, and engagement

PWAs start with a great web experience and then enhance that experience for performance, resilience, installation, and engagement

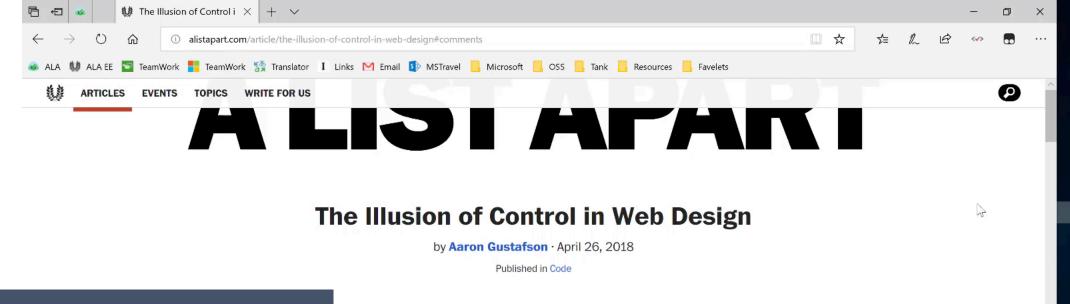

Progressive /prəˈgresiv/

happening or developing gradually or in stages; proceeding step by step

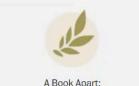

### **Step 1** Focus on what matters

## "Mobile first" thinking

d robust and engaging web experiences. We scrutinize every detail of an end hours getting the animation swing just right. We refactor our tiny fractions of a second off load times. We control absolutely everything we can, but the harsh reality is that we control less than we think.

A Book Apart: Brief books for people who make websites.

Last week, two events reminded us, yet again, of how right Douglas Crockford was when he declared the web "the most hostile software engineering environment imaginable." Both were serious enough to take down an entire site—actually hundreds of entire sites, as it turned out. And both were avoidable.

In understanding what we control (and what we don't), we will build resilient, engaging products for our users.

An Event Apart: 3 days of design, code, and content for web & UX designers & devs.

#### What happened?

The first of these incidents involved the launch of Chrome 66. With that release, Google implemented a security patch with serious implications for folks who weren't paying attention. You might recall that quite a few questionable SSL certificates issued by Symantec Corporation's PKI began to surface early last year. Apparently, Symantec had

### Remember that text is the first interface

# Is there anything missing that would help users be more successful?

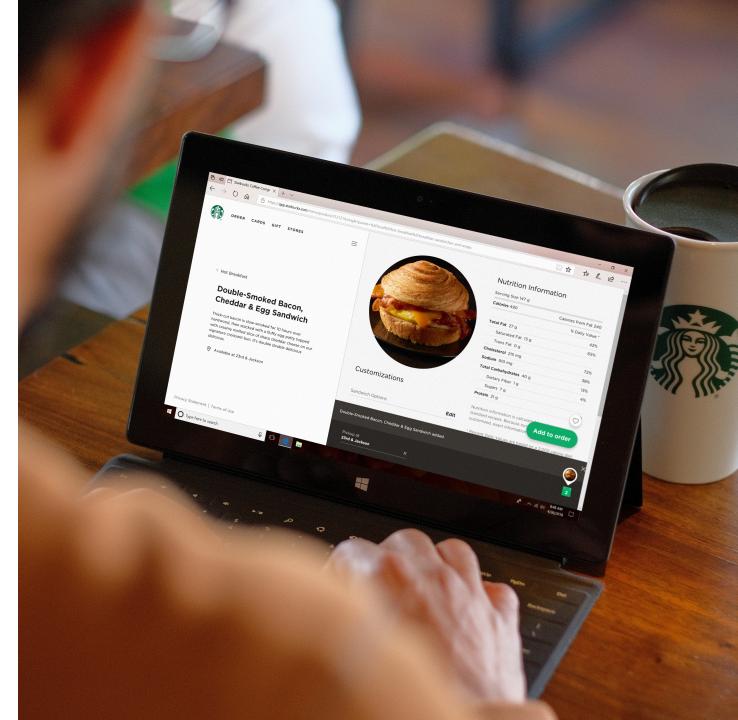

### Finding Our Focus

Josh Williams Starbucks

### Task first?

Turns out customers like to "do" things with the apps we build

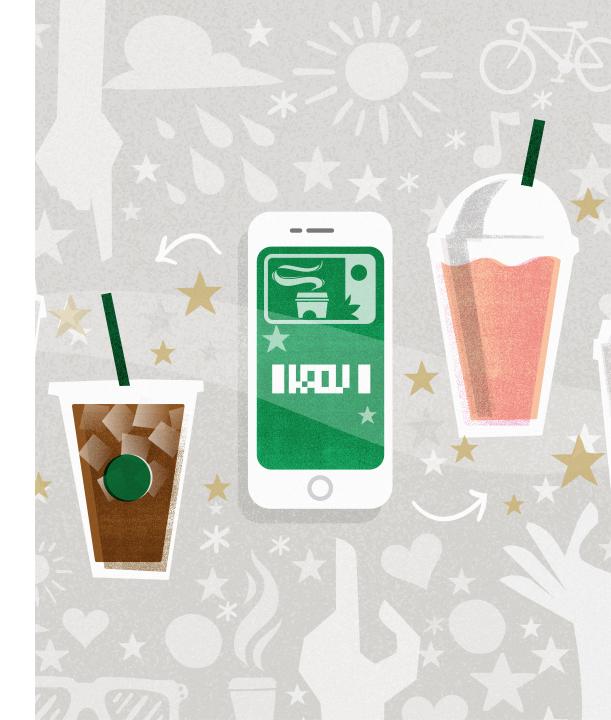

We focused on our key customer journeys

<sup>(\*)</sup>Enable customers to join the Starbucks Rewards program

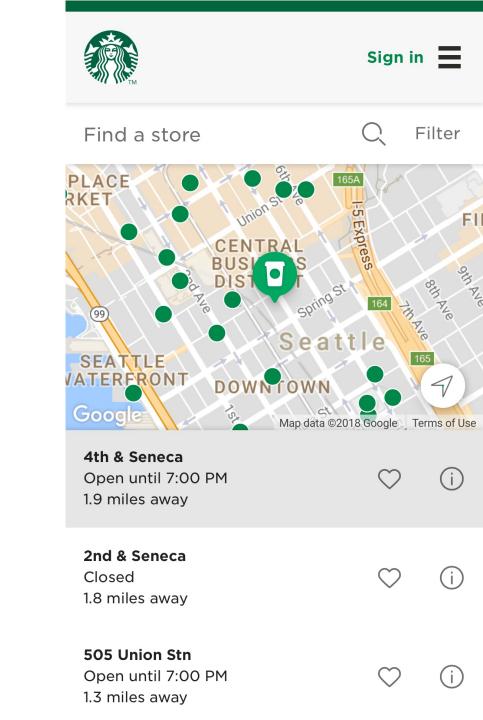

② Enable customers to transact via Order Ahead and Barcode Pay

② Enable customers to track progress towards their earned rewards

# Store Locator was our first actual production "PWA" feature

And it was chromed in the previous site

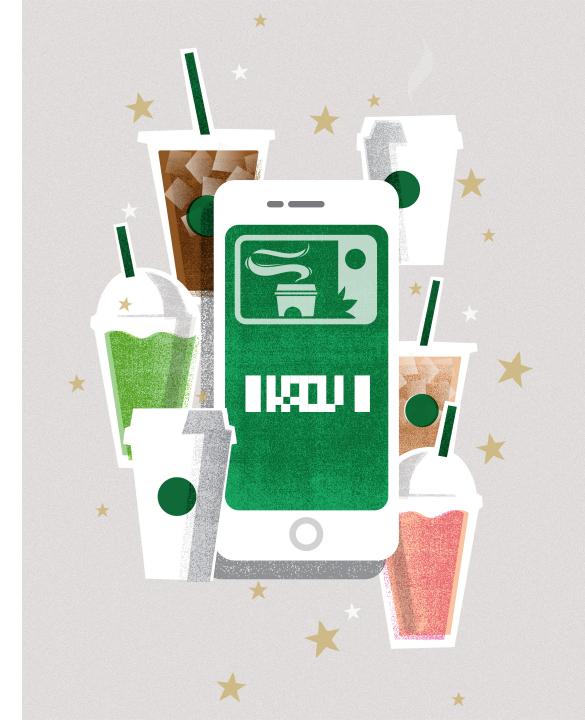

From there, we were able to add in other key features

③Sign-in and Account Create

Barcode pay

**PeGift and Account management** 

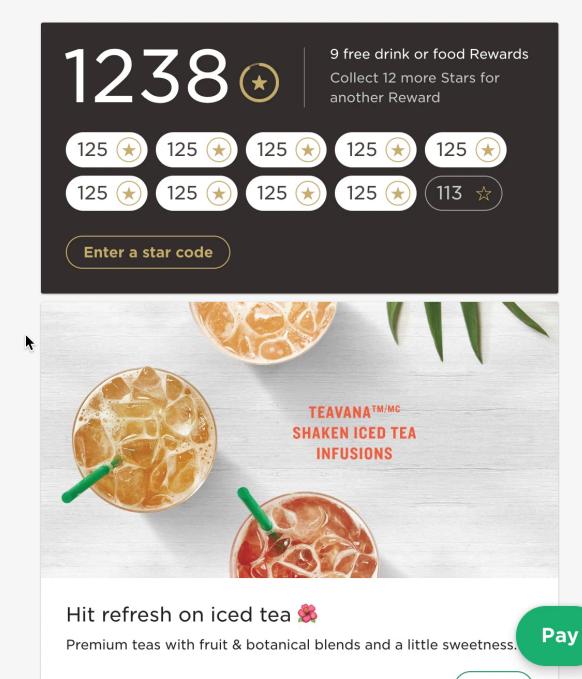

etc.

Ξ

### Good morning, Joshua. 🐳

### Finding Our Focus

Josh Williams Starbucks

# **Step 2** Use markup that supports the core experience

# The words we choose matter, but the markup we use matters equally

### What does it mean?

```
<div class="entry">
  <div class="entry title">Progressive Web Apps and
    the Windows Ecosystem</div>
  <div class="entry meta">
    <div><b>Published</b> 24 May 2017</div>
    <div><b>Reading Time</b> 25 minutes</div>
  </div>
  <div class="entry content">
    I had the great pleasure of delivering a talk...
    <br>><br>><br>
    I do a lot of traveling and it's...
  </div>
</div>
```

# This **div** marks up a piece of self-contained content

### <div class="entry">

<div class="entry\_\_title">Progressive Web Apps and the Windows Ecosystem</div>

### <div class="entry\_\_meta">

# **Developing Dependency Awareness**

# Coding 587 # CSS 243 # JavaScript 186 # jQuery 40

**I'm sure you've heard the proverb, "A chain is only as strong as its weakest link,"** probably many times. Its written origin dates back to the 18th century, but I wouldn't be surprised if it was much, much older. And though the work we do has little to do with Let's say you needed to code a button...

<input type="submit" value="Sign Up">

<a class="button" href="#">Sign Up</a>

<div class="button">Sign Up</div>

## Let's compare

Pattern	Display	Semantics	Focusable?	Activate By	Submits Forms
<pre>input[type=submit]</pre>	button	button	Yes	Mouse, touch, ENTER, SPACE	Yes
<pre>button[type=submit]</pre>	button	button	Yes	Mouse, touch, ENTER, SPACE	Yes
а	link	Named generic	Yes	Mouse, touch, ENTER	No
div	block	Not exposed	No	N/A	No

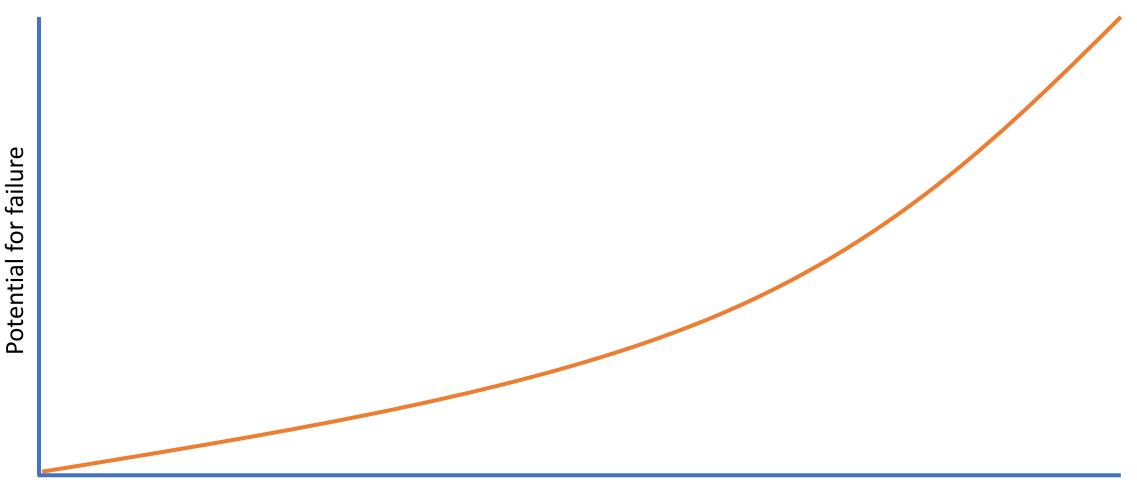

#### UX gaps that need to be filled

Pattern	Display	Semantics	Focusable?	Activate By	Submits Forms
<pre>input[type=submit]</pre>	button	button	Yes	Mouse, touch, ENTER, SPACE	Yes
<pre>button[type=submit]</pre>	button	button	Yes	Mouse, touch, ENTER, SPACE	Yes
a	link	Named generic	Yes	Mouse, touch, ENTER	No
div	block	Not exposed	No	N/A	No

#### Filling those gaps introduces dependencies

Pattern	Display	Semantics	Focusable?	Activate By	Submits Forms
<pre>input[type=submit]</pre>	None	None	None	None	None
<pre>button[type=submit]</pre>	None	None	None	None	None
а	CSS	ARIA	None	JavaScript	JavaScript
div	CSS	ARIA	HTML	JavaScript	JavaScript

#### More dependencies, more (potential) problems

Dependencies

#### Disaster averted

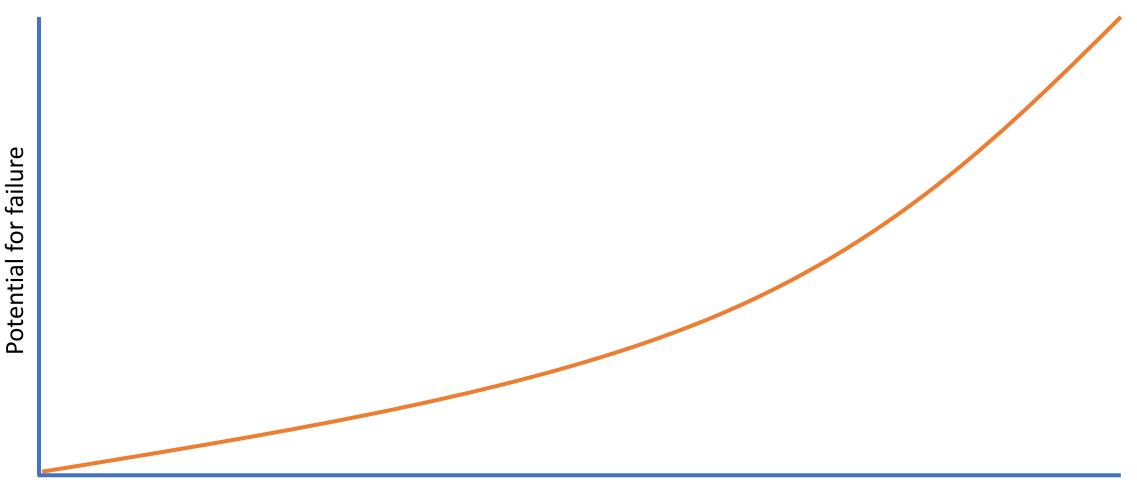

Do you think progressive enhancement is a waste of time? Think again! Chrome 66 just knocked out SSL on a CDN that hosted CSS and JS for 200 of my employer's sites and most of them still work with good ol' HTML! @AaronGustafson would be proud! :-)

\*

I've been amazed at how often those outside the discipline of design assume that what designers do is decoration—likely because so much bad design simply is decoration. Good design isn't. Good design is problem solving.

# Believing Women Means Believing Their Pain

A notoriously dangerous birth control device reveals the extent to which the medical establishment disbelieves women's pain

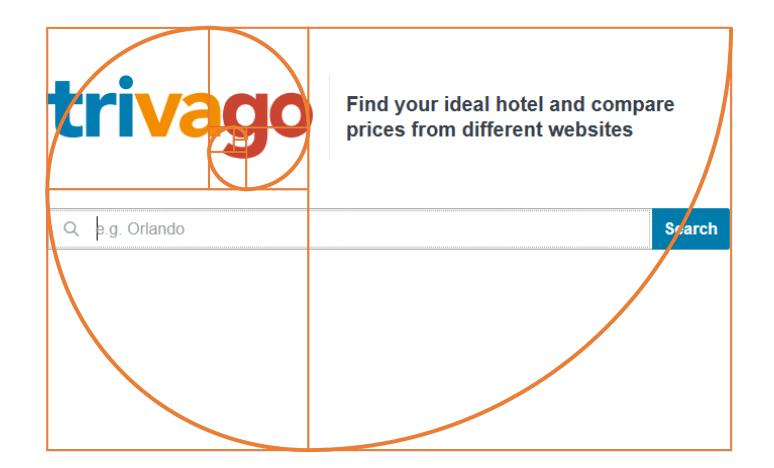

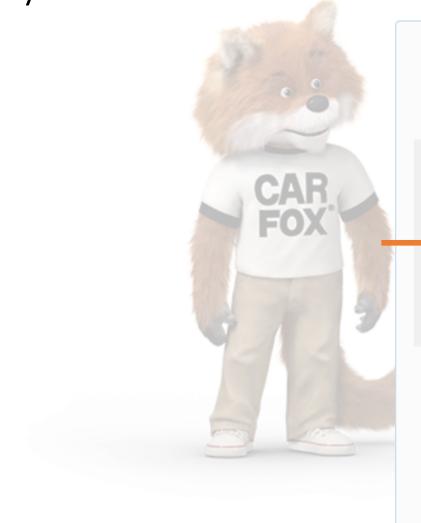

Melissa Davis Gilbert with her husband before her surgery in 2017. Gilbert has had the Essure device for about 10 years, and her symptoms — pelvic pain, fatigue, rashes, joint swelling — have gotten worse. In deciding to remove the device, it would mean she would have to get a hysterectomy. Photo by Katherine Frey/The Washington Post via Getty Images

  color: green;
  color: rgba(0, 255, 0, .8);
}
```

Passwords can be a hassle. Most people don't create strong passwords or make sure to maintain a different one for every site. People create easyto-remember passwords and typically use the same passwords across all of their accounts.

Older browsers without RGBa support, ignore the second rule

```
p {
    color: green;
    color: rgba(0, 255, 0, .8);
}
```

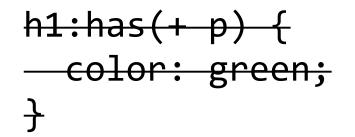

Passwords can be a hassle. Most people don't create strong passwords or make sure to maintain a different one for every site. People create easyto-remember passwords and typically use the same passwords across all of their accounts.

Modern browsers with RGBa support, overwrite the first rule

```
h1:has(+ p) {
   color: green;
}
```

Passwords can be a hassle

(That selects h1s that have adjacent sibling paragraphs.)

Passwords can be a hassle

Browsers that don't support :has() ignore the entire rule set

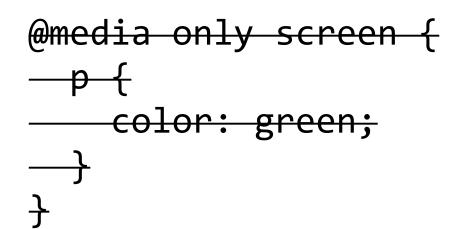

```
h1:has(+ p) {
   color: green;
}
```

Passwords can be a hassle

As browsers support :has(), matching h1s will turn green

```
@media only screen {
    p {
        color: green;
    }
}
```

Passwords can be a hassle. Most people don't create strong passwords or make sure to maintain a different one for every site. People create easyto-remember passwords and typically use the same passwords across all of their accounts.

Passwords can be a hassle. Most people don't create strong passwords or make sure to maintain a different one for every site. People create easyto-remember passwords and typically use the same passwords across all of their accounts.

Browsers without media query support ignore the block

```
@media only screen {
   p {
      color: green;
   }
}
```

Passwords can be a hassle. Most people don't create strong passwords or make sure to maintain a different one for every site. People create easyto-remember passwords and typically use the same passwords across all of their accounts.

Browsers with media query support apply it

```
@supports (display: grid) {
    p {
        color: green;
    }
}
```

Passwords can be a hassle. Most people don't create strong passwords or make sure to maintain a different one for every site. People create easyto-remember passwords and typically use the same passwords across all of their accounts.

Passwords can be a hassle. Most people don't create strong passwords or make sure to maintain a different one for every site. People create easyto-remember passwords and typically use the same passwords across all of their accounts.

Browsers that don't grok @supports ignore the block

Passwords can be a hassle. Most people don't create strong passwords or make sure to maintain a different one for every site. People create easyto-remember passwords and typically use the same passwords across all of their accounts.

Browsers that understand @supports, but don't display grid ignore it

### Enhance the experience

#### "Mobile first" design

```
"Desktop first"
```

```
.primary {
  float: left;
  width: 68%;
}
.secondary {
  float: right;
  width: 32%;
}
@media (max-width:599px) {
  .primary, .secondary {
    float: none;
    width: auto;
```

#### "Desktop first"

```
.primary {
  float: left;
 width: 68%;
}
.secondary {
  float: right;
 width: 32%;
}
@media (max-width:599px) {
  .primary, .secondary {
    float: none;
    width: auto;
```

#### "Desktop first"

```
.primary {
  float: left;
  width: 68%;
}
.secondary {
  float: right;
  width: 32%;
@media (max-width:599px) {
  .primary, .secondary {
    float: none;
    width: auto;
  }
```

#### "Mobile first"

```
@media (min-width:600px) {
  .primary {
    float: left;
    width: 68%;
  }
  .secondary {
    float: right;
    width: 32%;
  }
```

#### "Mobile first"

```
@media (min-width:600px) {
  .primary {
    float: left;
    width: 68%;
  .secondary {
    float: right;
    width: 32%;
  }
```

Other ways to design "mobile first"

<sup>®</sup>Selectively deliver advances styles

<sup>®</sup>Isolate large CSS images in min-width media queries

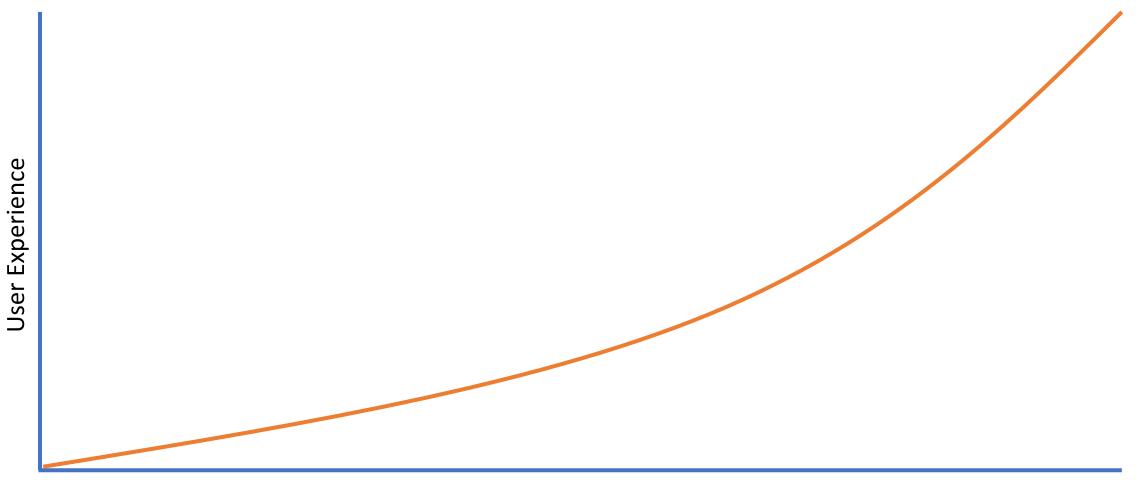

<sup>(b)</sup>Don't hide content images using CSS

<sup>(2)</sup>Use responsive images

<sup>()</sup>Prefer system fonts

@font-display: optional

### Enhance the experience

#### **Step 4** Improve the core experience with JavaScript

# When it comes to HTML & CSS, browsers ignore what they don't understand

When it comes to HTML & CSS, browsers ignore what they don't understand

Sadly, that's not the case with JavaScript

What happens when a browser doesn't understand **let**?

document.body.innerHTML += 'Can I count to four?';

```
for ( let i=1; i<=4; i++ )
{
    document.body.innerHTML += '<p>' + i + '';
}
```

document.body.innerHTML += 'Success!';

#### **Does your browser support let?**

If it does, you should see some numbers in paragraphs, followed by a success message.

Can I count to four?

1

2

3

4

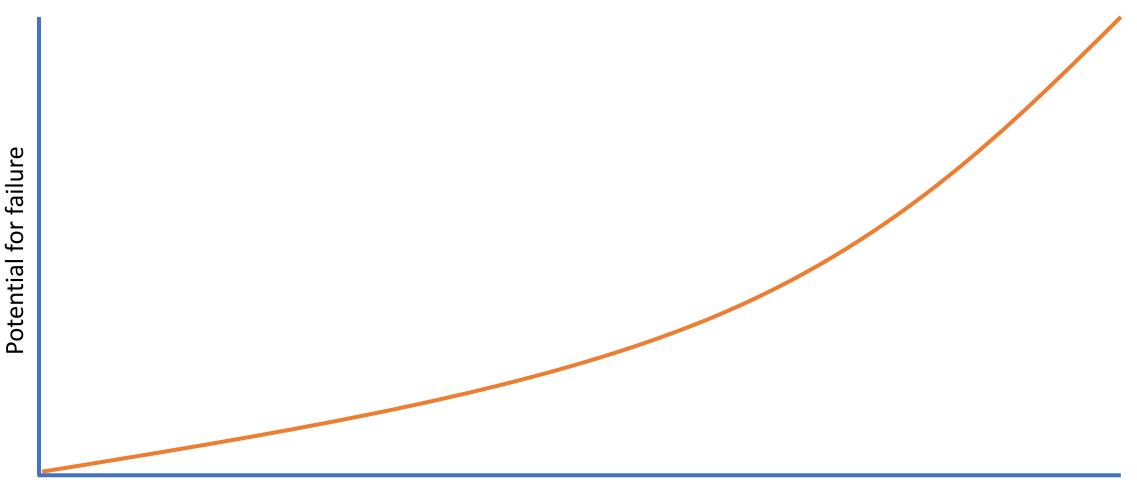

Success!

#### More dependencies, more (potential) problems

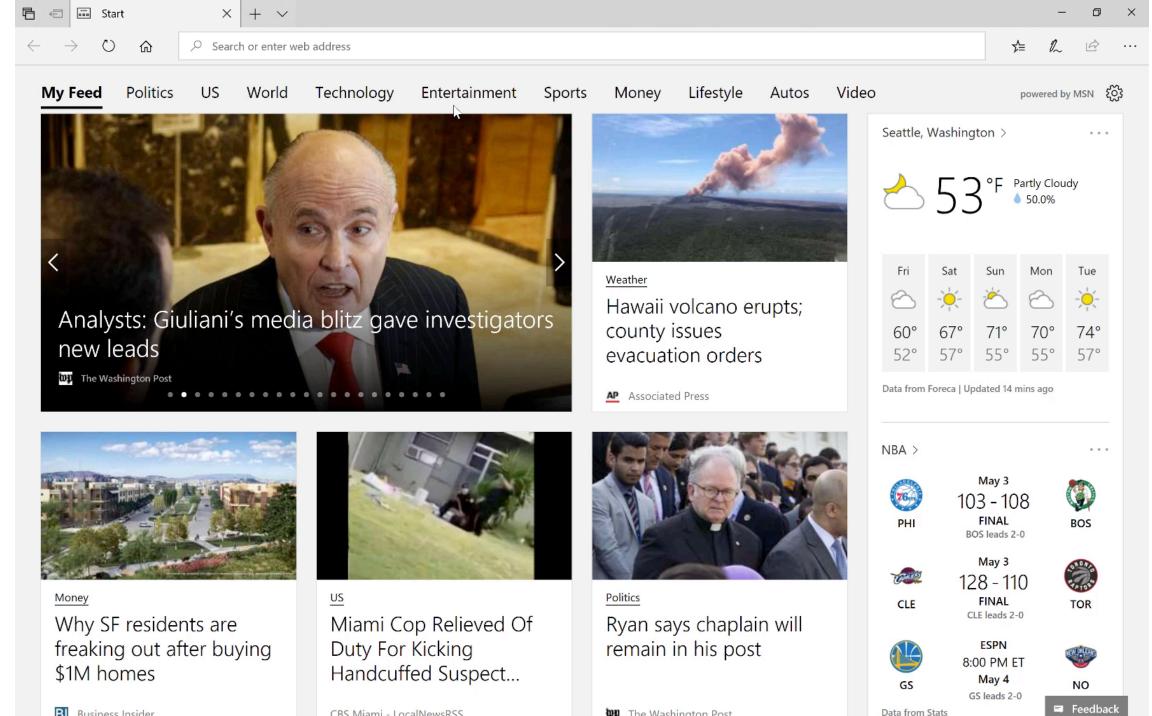

Dependencies

## We can and should use JavaScript, but thoughtfully & intentionally

#### Enhance the experience

B Business Insider

CBS Miami - LocalNewsRSS

**WP** The Washington Post

#### Detecting support

}

if ( navigator.credentials ) {

```
// Actual logic goes here
```

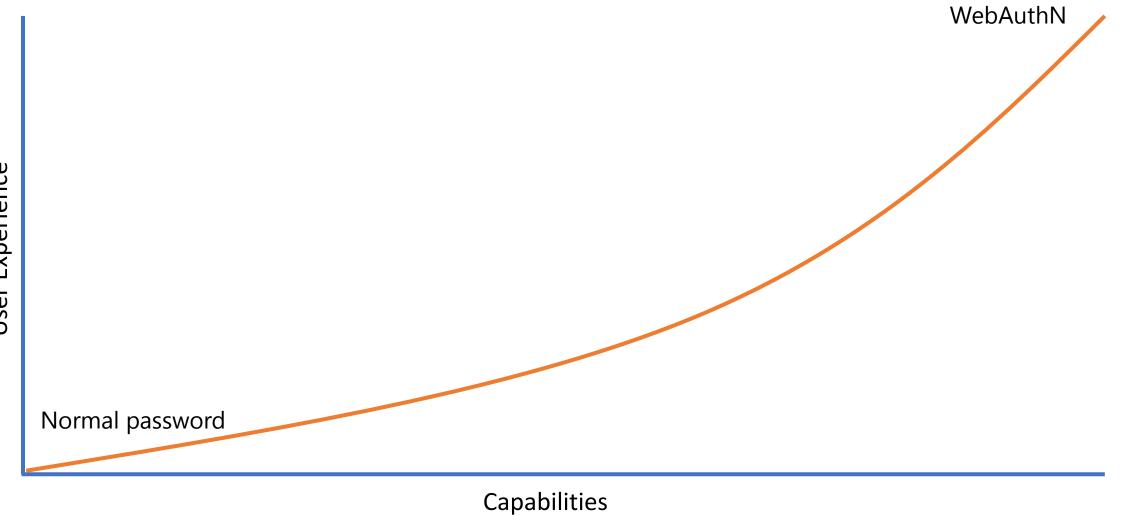

#### Creating the credential

```
// Create a credential with WebAuthn APIs
navigator.credentials.create({
  publicKey: {
    rp: { /* relying party info */ },
    user: { /* user info */ },
    authenticatorSelection: {
      authenticatorAttachment: "platform"
    },
    pubKeyCredParams: [{
      type: "public-key",
      alg: -257 /* Accept RS256 credentials */
    }],
    // and other required parameters such as challenge, timeout, ...
  }
}).then(attestation => {
  // Send the credential to your server, which decodes it and stores the public key
  sendToServer(attestation);
});
```

#### Verifying the credential later

```
// Next time the user visits the page, call the WebAuthn APIs
navigator.credentials.get({
  publicKey: {
    allowCredentials: [{
      type: "public-key",
      id: credentialId // ID of credential(s) previously created
    }]
    // and other required parameters such as challenge, timeout, ...
  }
}).then(assertion => {
  // Send the assertion to your server, which decodes it and ensures the
  // contained signature matches the public key received at credential creation
  sendToServer(assertion);
});
```

#### Enhance the experience

User Experience

### Wait, but don't Progressive Webs and Service Workers require JavaScript?!

Registering a Service Worker

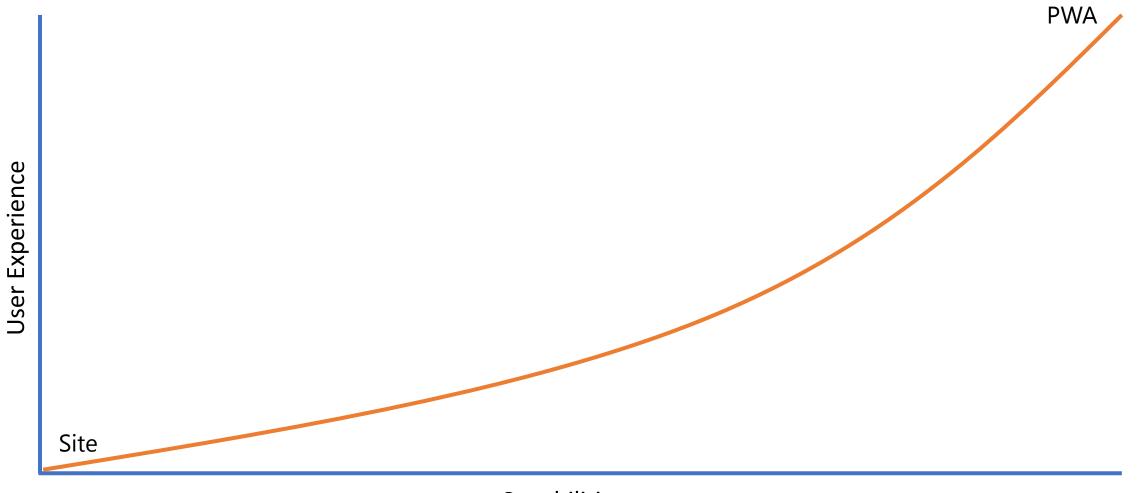

```
if ( navigator.serviceWorker ) {
  navigator.serviceWorker.register('/serviceworker.js')
    .then(function(registration) {
      console.log('Success!', registration.scope);
    })
    .catch(function(error) {
      console.error('Failure!', error);
    });
```

#### Object detection FTW!

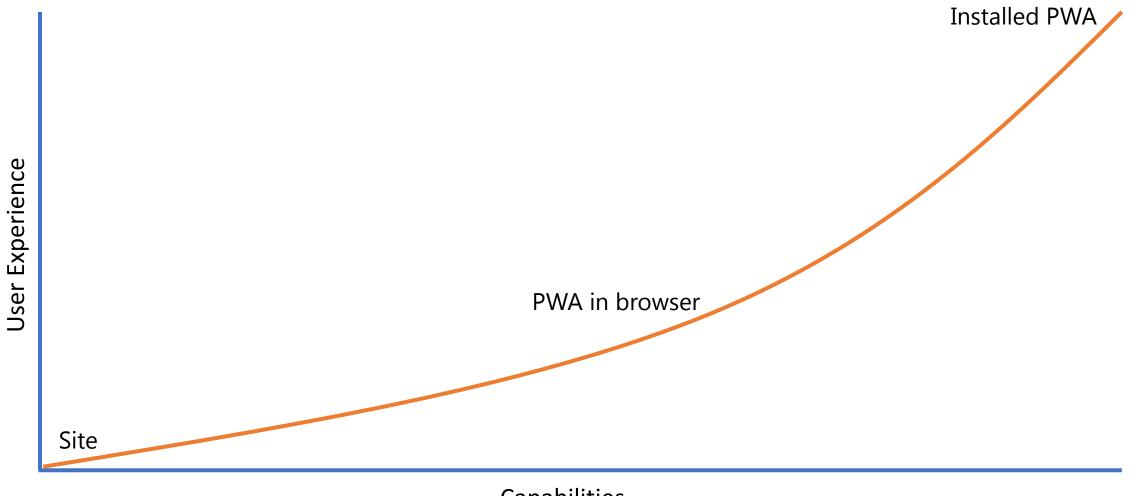

#### if ( navigator.serviceWorker ) {

```
navigator.serviceWorker.register('/serviceworker.js')
.then(function(registration) {
    console.log('Success!', registration.scope);
})
.catch(function(error) {
    console.error('Failure!', error);
});
```
