

Your Guide To Dysport Treatment At Birem, MD Beauty & Wellness

Are you thinking about Dysport treatments to rejuvenate your facial appearance? We must say that [Dysport Virginia](#) is a great treatment for reducing wrinkles and getting a better facial structure. You have come to the right place because Birem, MD Beauty & Wellness offers expert Dysport injections. We'll cover everything from What is Dysport, to how it works in this post.

What is Dysport?

Dysport is a treatment that is designed to relax the facial muscles and reduce the appearance of aging lines like wrinkles and other folds that appear on the facial line. The injection uses botulinum toxin that reduces the ability of muscles to contract thereby causing the wrinkles to soften and fade.

What happens during the procedure?

During the procedure, a Dysport expert at Birem, MD Beauty & Wellness will inject a small amount of product directly into the muscles that are responsible for bringing out wrinkles and fine lines on your face. The procedure is quick and relatively painless, with minimal downtime required afterward.

Before your treatment

Before undergoing the treatment, you must schedule a consultation at the Birem, MD Beauty & Wellness clinic. You'll get to know all about the procedure and its working in your consultation. A qualified injector will talk to you about your goals and formulate a personalized treatment approach. You must make sure to inform your injector about any kind of medical condition that you have, allergies you have, or medications you are currently taking.

What to expect from your Dysport treatment at Birem, MD Beauty & Wellness?

You can expect to be comfortable and get good care at Birem, MD Beauty & Wellness on the day of your [facial Mclean VA](#) treatment. Your injector will use a very fine needle to give Dysport® injections to specific parts of your face, like your forehead, glabellar area, or crow's feet. The process usually doesn't take more than 30 minutes, and you can go back to your normal activities right away.

Results and Recovery

Following your injection, you may experience mild redness, or bruising at the injection site. These are temporary side effects that subside within a few days. Your wrinkles will start fading in about 2-3 days, with full results in about 2 to 3 weeks. The effects of Dysport treatment at Birem, MD Beauty & Wellness can last up to five months. After this, you can choose to undergo additional treatments like fillers and [microneedling](#) to maintain the result.
