Building for Omni- Channel

Edge Portal Apps POC

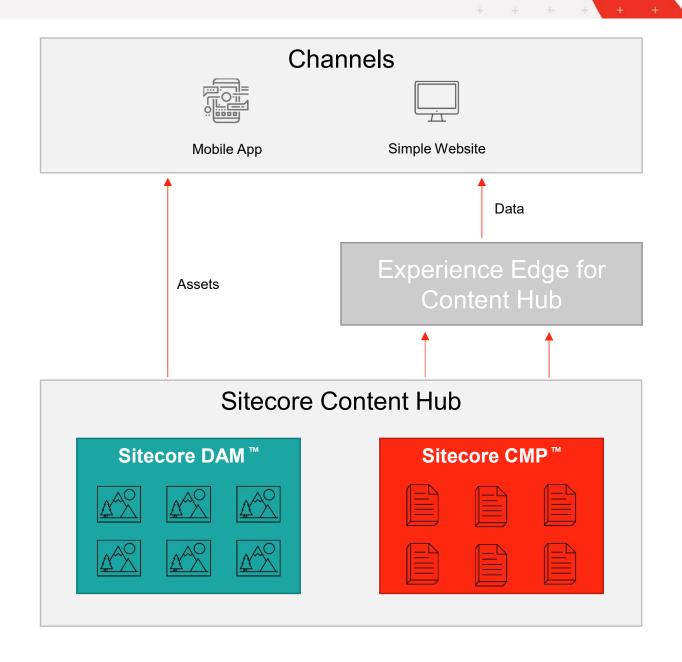

- Opportunity to test omni-channel delivery
- Proof of Concept Not intended to be officially released

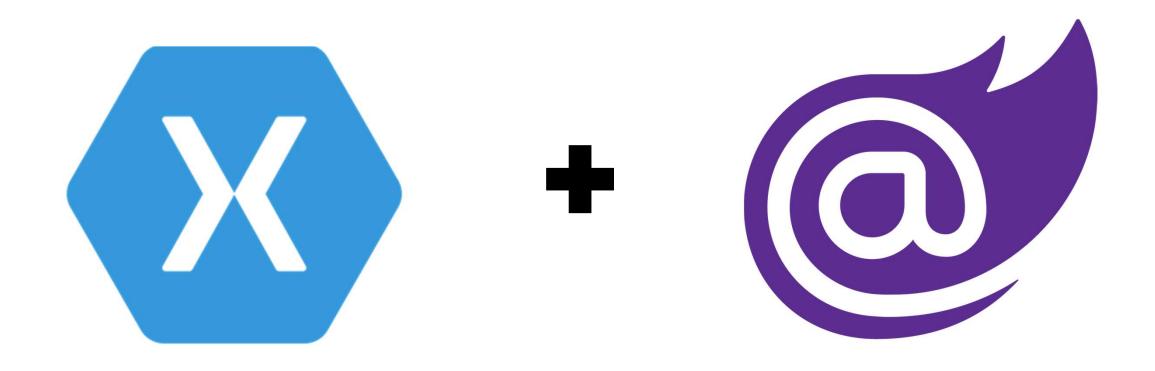

Delivery overview

Enter Mobile Blazor Bindings.....

What is Xamarin?

Xamarin extends the .NET platform with tools and libraries specifically for building apps on iOS, Android, macOS, and more.

- Base framework for accessing native features
- Extensible Markup Language, known as XAML, for building dynamic mobile apps using C#
- Libraries for common patterns, such as Model View ViewModel(MVVM)
- Platform specific libraries that includes access to APIs from Google, Apple, Facebook, and more to add rich capabilities
- Editor extensions to provide syntax highlighting, code completion, designers, and other functionality specifically for developing mobile pages

What is Blazor?

Blazor lets you build interactive web UIs using C# instead of JavaScript. Blazor apps are composed of reusable web UI components implemented using C#, HTML, and CSS. Both client and server code is written in C#, allowing you to share code and libraries.

Blazor uses open web standards without plug-ins or code transpilation. Blazor works in all modern web browsers, including mobile browsers.

Based on .NET Standard to allow for simple code sharing

What are Mobile Blazor Bindings?

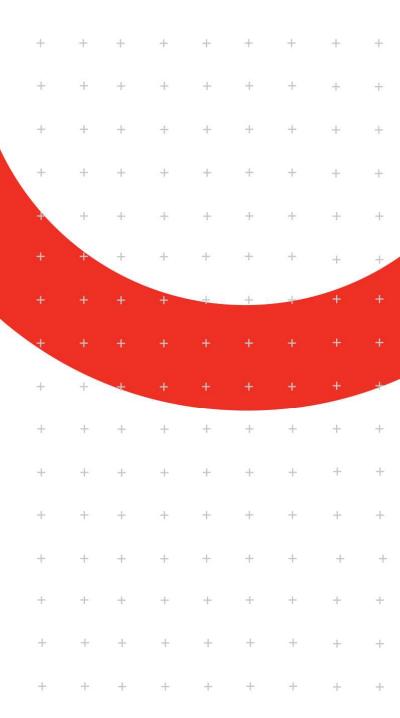

- MBB is ***EXPERIMENTAL***
- Build native and hybrid mobile apps using C# and .NET for Android, iOS, Windows, and macOS
- Use the Blazor the programming model and Razor syntax to define UI components.

```
<StackLayout>
  <Label FontSize="30"</pre>
         Text="@("You pressed " + count + " times")" />
  <Button Text="+1"
           OnClick="@HandleClick"/>
</StackLayout>
@code {
  Int count;
  void HandleClick()
    count++;
```

Let see this in action!
