Disha Rathod, DevOps Online Trainer (2013-present)

Answered Sep 14, 2017

Originally Answered: As a Linux system administrator, how do I shift my career to DevOps?

Hi,

Being a Linux administrator will help you to easily get started with DevOps because it starts with learning Linux fundamentals, DevOps also includes cloud computing concepts like AWS. More importantly DevOps is all about tools, it comes with hundreds of tools. Gits, Chef, Maven, Jenkins, Puppet, Docker are modern and most popular DevOps tools.

So in order to move into DevOps industries you should have prominent knowledge following concepts

1. Linux Fundamental; Shell Scripting
2. Cloud Computing (AWS)
3. DevOps Fundamentals
4. Software Development Life Cycle
5. Continuous Integration, Deployment, and Delivery.
6. DevOps Tools: Gits, Chef, Maven, Jenkins, Puppet, Docker etc.

Aspect of Software Delivery Performance

Deployment frequency

For the primary application or service you work on, how often does your organization deploy code?

Lead time for changes

For the primary application or service you work on, what is your lead time for changes (i.e., how long does it take to go from code commit to code successfully running in production)?

Time to restore service

For the primary application or service you work on, how long does it generally take to restore service when a service incident occurs (e.g., unplanned outage, service impairment)?

Change failure rate

For the primary application or service you work on, what percentage of changes results either in degraded service or subsequently requires remediation (e.g., leads to service impairment, service outage, requires a hotfix, rollback, fix forward, patch)?

| Time Spent | | Elite | High | Medium | Low |
|--|----------|-------|------------------|------------------|------------------|
| | NEW WORK | 50% | 50% | 40% | 30% |
| Unplanned work and rework | | 19.5% | 20% ^a | 20% ^a | 20% ^a |
| Remediating security issues | | 5% | 5% ^b | 5% ^b | 10% |
| Working on defects identified by end users | | 10% | 10% ^c | 10% ^c | 20% |

Manifesto for Software Craftsmanship

Raising the bar.

As aspiring Software Craftsmen we are raising the bar of professional software development by practicing it and helping others learn the craft. Through this work we have come to value:

Not only working software,
but also **well-crafted software**

Not only responding to change,
but also **steadily adding value**

Not only individuals and interactions,
but also **a community of professionals**

Not only customer collaboration,
but also **productive partnerships**

That is, in pursuit of the items on the left we have found the items on the right to be indispensable.

@jbaruch

#DevOps

Becoming a full-stack developer

“Full-stack” refers to the collection of technologies needed to complete your project

“Polyglot” developer

You learn the **essence** and can apply it in **any** language/technology

You still learn most needed parts **deeply** as you gain **experience**

Structuring, design, security, logging, auto testing, simplicity, etc

Also deployment - you don't want to be called during the night

SOFTWARE CRAFTSMAN DEFINITION OF DONE

- ✓ We understand what needs to be done
- ✓ Our code is readable, simple, understandable
- ✓ Our code is easy to deploy
- ✓ Non-functional requirements are met
- ✓ We didn't incur any technical debt (and even reduced some)
- ✓ Our tests pass
- ✓ QA took a look and they are happy
- ✓ Team lead took a look, and they are happy
- ✓ Product owner took a look, and they are happy
- ✓ Client took a look, and they are happy

SRE TOOK A LOOK, AND THEY ARE HAPPY

- ✓ We understand how our code is going to be deployed
- ✓ The build is reliable, repeatable, and fast
- ✓ Our code is stateless, thus scalable
- ✓ Our code starts fast and dies fast
- ✓ Our code is observable
- ✓ Our code supports feature flags
- ✓ Our code backwards and forwards compatible
- ✓ Our code emits event streams

THE TWELVE-FACTOR APP

THE TWELVE FACTORS

I. Codebase

One codebase tracked in revision control, many deploys

II. Dependencies

Explicitly declare and isolate dependencies

III. Config

Store config in the environment

IV. Backing services

Treat backing services as attached resources

V. Build, release, run

Strictly separate build and run stages

VI. Processes

Execute the app as one or more stateless processes

VII. Port binding

Export services via port binding

VIII. Concurrency

Scale out via the process model

IX. Disposability

Maximize robustness with fast startup and graceful shutdown

X. Dev/prod parity

Keep development, staging, and production as similar as possible

XI. Logs

Treat logs as event streams

XII. Admin processes

Run admin/management tasks as one-off processes

Beyond the Twelve-Factor App

Exploring the DNA of Highly Scalable,
Resilient Cloud Applications

What is SRE?

SRE is what you get when you treat operations as if it's a software problem. Our mission is to protect, provide for, and progress the software and systems behind all of Google's public services — Google Search, Ads, Gmail, Android, YouTube, and App Engine, to name just a few — with an ever-watchful eye on their availability, latency, performance, and capacity.

- ✓ Yes, DevOps is an Ops idea
- ✓ But the business liked it!
- ✓ It's quality, it's lean, it's competitive advantage, it's security
- ✓ It's not as bad as it sounds.

Now everything is code, and we love code!

- ✓ All we need to do is follow principles and practices, and that we know how to do!
