

# Red Hat Update for System z

**Shawn Wells, RHCE**

**EMail: [swells@redhat.com](mailto:swells@redhat.com)**

**Lead, Linux on System z**

# Agenda

## 45min Update on Red Hat

- Today
- Tomorrow
- Together

# Introductions

- Shawn Wells  
W/W Lead, Linux on System z
  - Solutions Architect
  - Business Development, Presentations & Demos, Interface to Prod Mgmt, etc

# Introductions

- Shawn Wells  
W/W Lead, Linux on System z
  - Solutions Architect
  - Business Development, Presentations & Demos, Interface to Prod Mgmt, etc
  
- Also here at T3.....
  - Brad Hinson  
Lead, Linux on System z Technical Support
  
  - Justin Payne  
Sr Technical Support Engineer, Linux on System z

# Red Hat Development Model

## Community

- Development with “upstream” communities
- Kernel, glibc, etc
- Collaboration with partners, IBM, open source contributors

# Red Hat Development Model

## Fedora

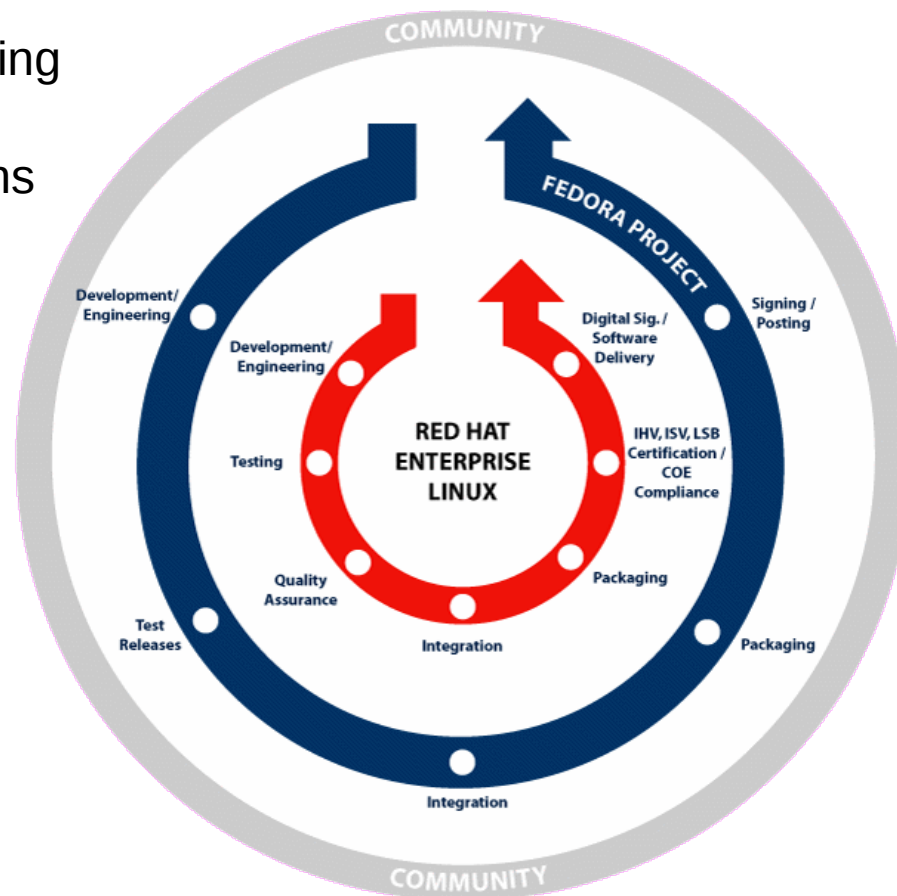

- Rapid innovation
- Latest technologies
- Community Supported
- Released ~6mo cycles

# Red Hat Development Model

## Red Hat Enterprise Linux

- Stable, mature, commercial product
- Extensive Q&A, performance testing
- Hardware & Software Certifications
- 7yr maintenance
- Core ABI compatibility guarantee
- Major releases 2-3yr cycle

# Red Hat Today: *Announcements*

## *Extended Product Lifecycle*

Production 1

Production 2

Production 3

	Production 1	Production 2	Production 3
Security Patches	X	X	X
Bug Fixes	X	X	X
Hardware Enablement	Full	Partial	None
Software Enhancements	X		

# Red Hat Today: *Announcements*

## ***Red Hat Enterprise Linux 4.7***

Announced Thursday, July 24 2008

- 2.6.9-78 Kernel Stream
- Added AIDE
- Ability to generate SHA-256 and SHA-512 password hashes
- Updated zFCP driver to include bugfixes
- Updated qdio driver to fix zFCP/SCSI write to IO stagnates on LPAR
- `/proc/sys/vm/nfs-writeback-lowmem-only` param to fix NFS read performance
- `/proc/sys/vm/write-mapped` to help select faster NFS read performance
- `autofs5`
  
- *N\_PIV is waiting development acceptance for 4.8 (Already in RHEL5)*

# Red Hat Today: *Announcements*

## ***What is AIDE?***

- Intrusion Detection program
- Ships with RHEL5, now in 4.7

**# yum install aide**

**# aide -init**

# Red Hat Today: *Announcements*

## ***What is AIDE?***

- Intrusion Detection program
- Ships with RHEL5, now in 4.7

```
# yum install aide
```

```
# aide -init
```

```
# chmod 777 /etc/hosts
```

# Red Hat Today: *Announcements*

## ***What is AIDE?***

- Intrusion Detection program
- Ships with RHEL5, now in 4.7

```
# yum install aide
```

```
# aide -init
```

```
# chmod 777 /etc/hosts
```

```
# aide - -check
```

**AIDE found differences between database and filesystem!!**

**Changed files:**

**changed:/etc/hosts**

**Detailed information about changes:**

**File: /etc/hosts**

**Permissions: -rw-r--r-- , -rwxrwxrwx**

# Red Hat Today: *Announcements*

## ***Red Hat / IBM Alliance***

### **Technical Perspective**

- Dedicated Partner Managers
- IBM on-site kernel engineers at Red Hat
- Weekly calls with IBM System z Product Mgmt
- Emphasis on IBM access to code (making it easier to work together)
- Weekly reviews of open bugs & feature requests
- Proof of Concept Support

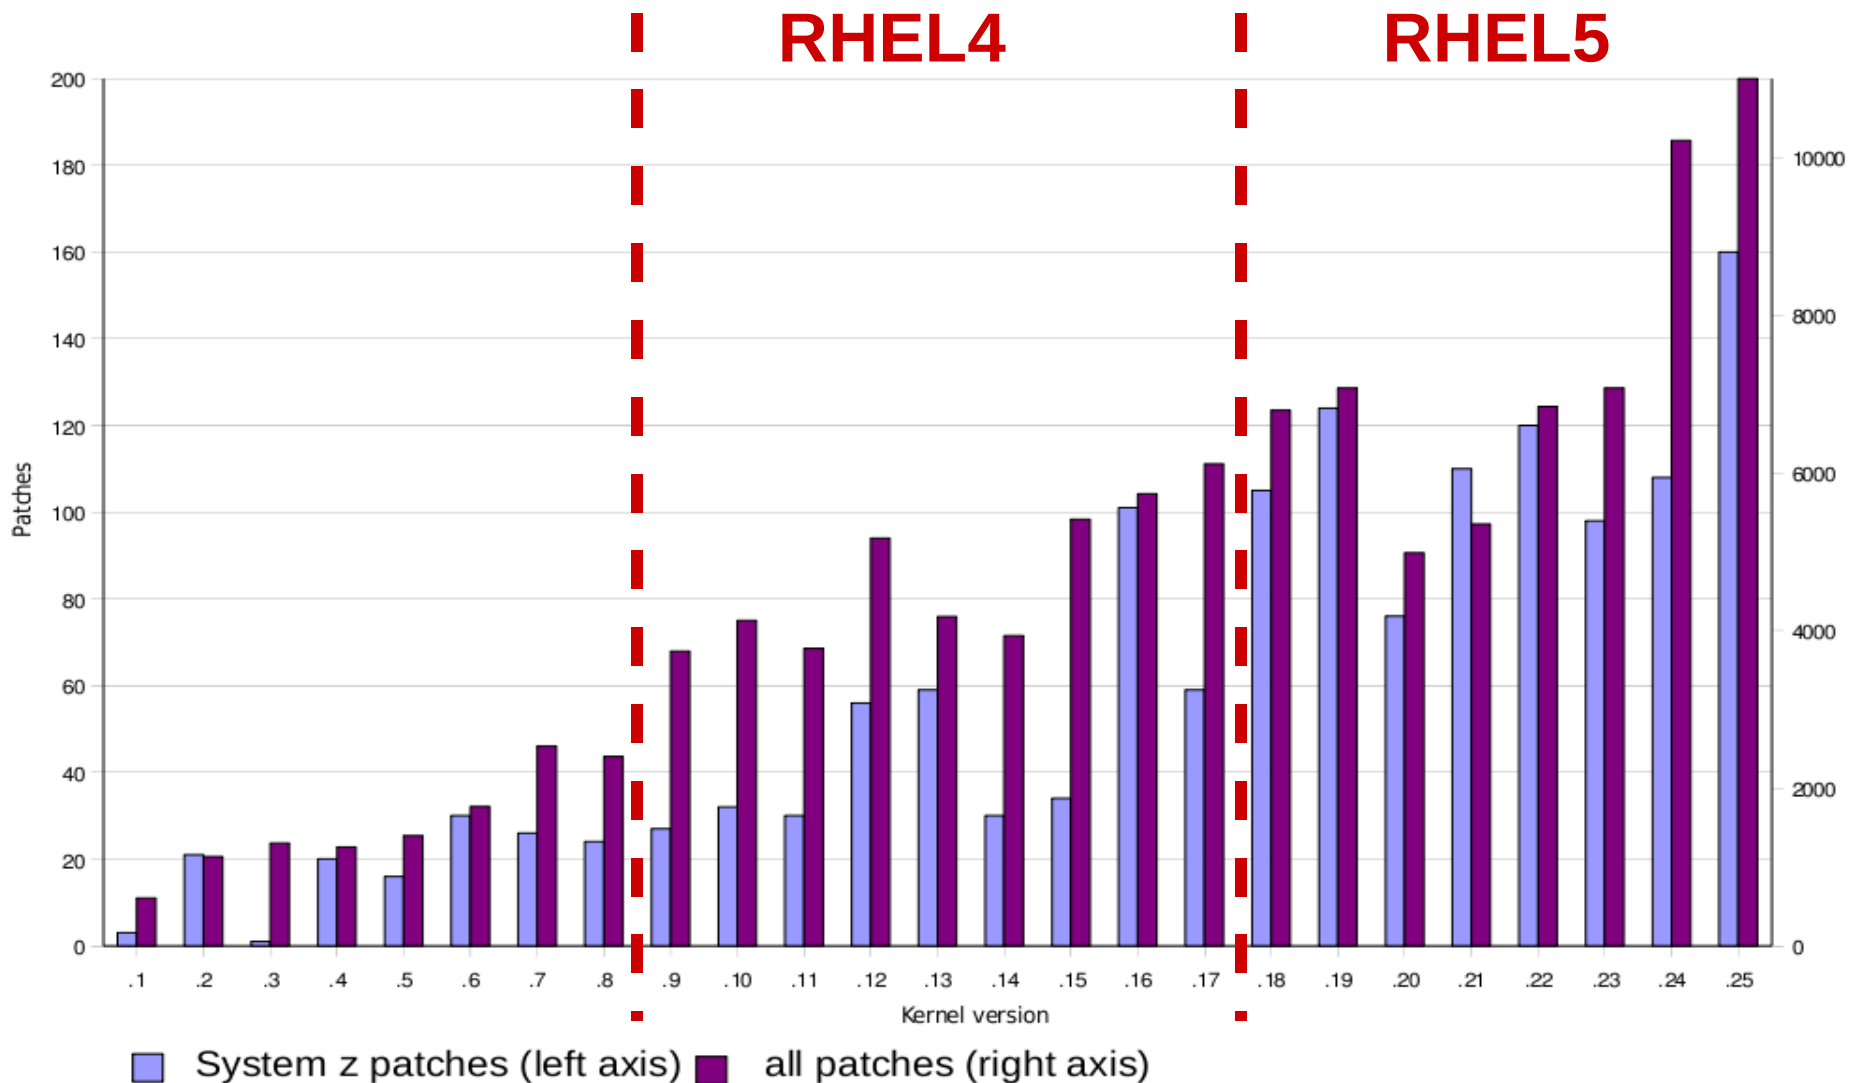

### **Marketing & Sales Perspective**

- Joint World-Wide Tour
- Marist, zNTP, T3, SHARE, zExpo, etc

### **Business Perspective**

- Dedicated staff from helpdesk to executive

# IBM Changes to 2.6.x Kernel

# Red Hat Today: *RHEL Status*

## Upstream of Code

- DASD Drive Updates
- zFCP Driver Updates
  - zFCP multipathing support in RHEL5 installer
- Crypto2 Express Support
- Hugetblfs
- Layer-2 IPv6 support for Hipersockets

## Marketing Perspective

- Joint World-Wide Tour
- Marist, zNTP, T3, SHARE, zExpo, etc

## Sales Perspective

- Joint sales calls

the proof  
is in  
the  
pudding...

# Red Hat Today: *RHEL Status*

## **RHEL 5.1**

- Improved z/VM scheduling
- Improved performance with key recompiled libraries

## **RHEL 5.2**

- Support for new IBM z10
- Improved IBM Director support to support fast connection to z/VM
- Improved Virtual Server Management
- Implementation of SCSI dump infrastructure
- Support for Dynamic CHPID reconfiguration
- Better network configuration tool support for System z network adapters
- Improved install experience with support for “ssh -X” with VNC
- Better network performance with skb scatter-gather support
- Implemented device-multipath support for xDR/GDPS

## **RHEL 5.3**

- NSS, CPU Affinity, ETR support planned
- Suggestions? [swells@redhat.com](mailto:swells@redhat.com)

# Red Hat Today: *RHEL Security Status*

## ***Hardware Enablement***

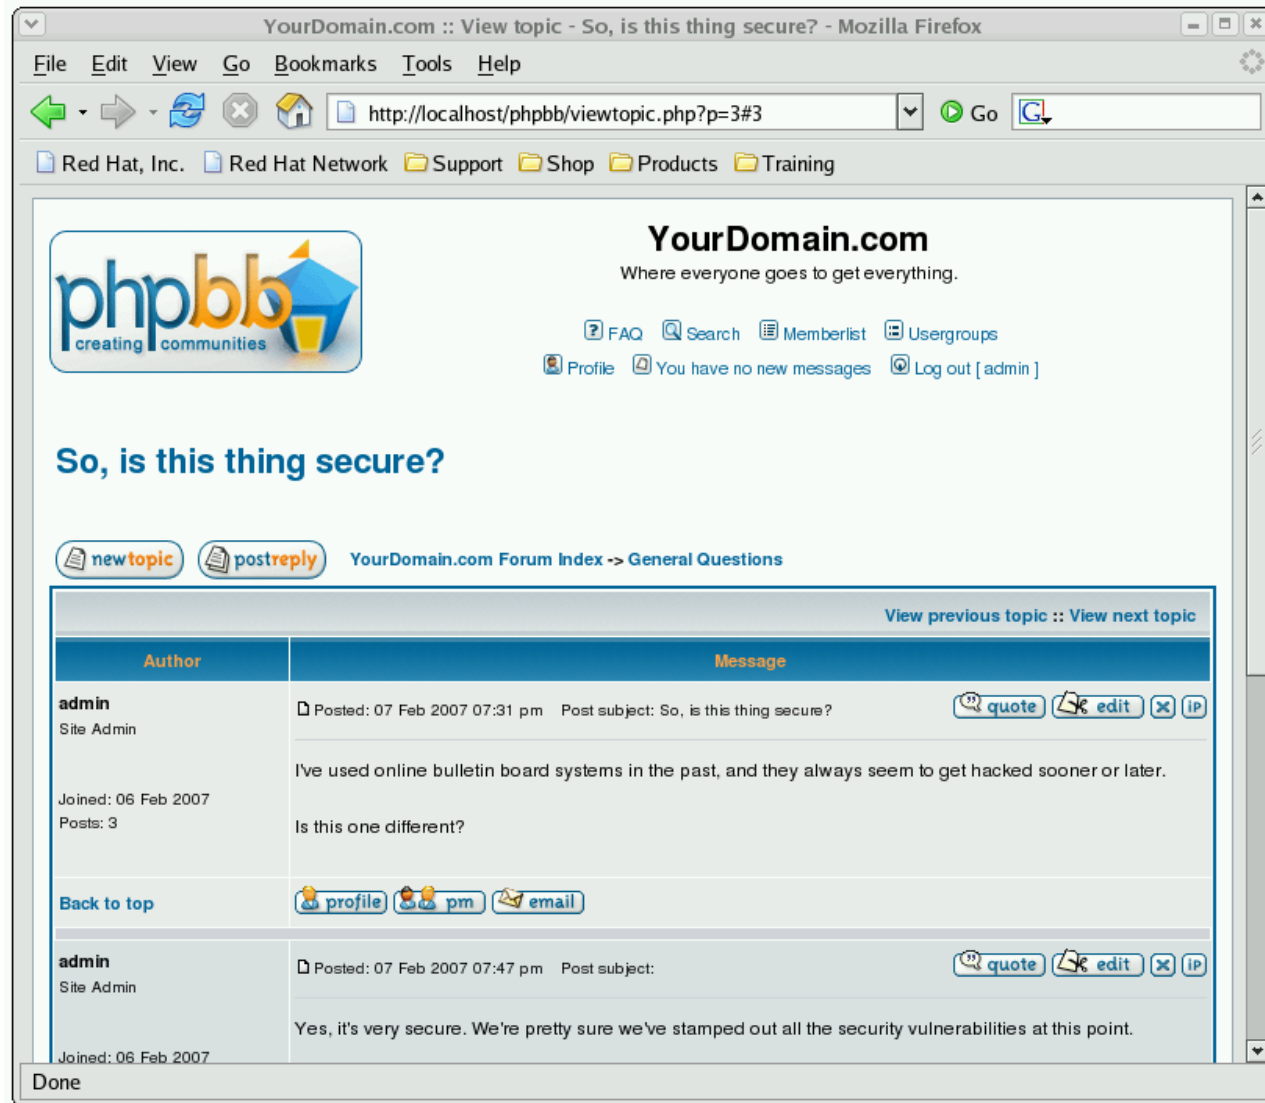

- **In kernel crypto**
  - S/390 implementation of SHA-384 and SHA-512 digests
  - Improved encryption performance (i.e. encrypted filesystems)
- **libica library**
  - Support for updated OpenSSL, PKCS#11, GSKit, and kernel crypto APIs
  - Device driver performance updates
- **Crypto2 Express Support**

# Red Hat Today: *RHEL Security Status*

## ***Kernel Enablement***

- **SELinux**
  - Policies { targeted, strict, MLS }
  - Contexts { root:system\_r:httpd\_sys\_script\_t }
  - Roles { system\_r, object\_r }
- **ExecShield, FORTIFY\_SOURCE, and Canary Values**
  - kernel.exec-shield (/proc/sys/kernel/exec-shield)
- **ACL Lists**
  - setfactl, getfac

# Red Hat Today: *SELinux Use Case*

The screenshot shows a Mozilla Firefox browser window displaying a forum topic on 'YourDomain.com'. The URL in the address bar is `http://localhost/phpbb/viewtopic.php?t=2&highlight=%2527%252Esystem(chr101)%252Ech`. A red arrow points from the highlighted portion of the URL to a red-bordered box containing the full URL with a shell escape sequence: `http://localhost/phpbb/viewtopic.php?t=2&highlight=%2527%252Esystem(chr101)%252Echr(99)%252Echr(104)%252Echr(111)%252Echr(32)%252Echr(34)%252Echr(60)%252Echr(63)%252Echr(112)%252Echr(104)%252Echr(112)%252Echr(32)%252Echr(101)%252Echr(99)%252Echr(104)%252Echr(111)%252Echr(32)%252Echr(92)%252Echr(34)%252Echr(60)%252Echr(102)%252Echr(111)%252Echr(118)%252Echr(116)%252Echr(32)%252Echr(115)%252Echr(105)%252Echr(122)%252Echr(101)%252Echr(61)%252Echr(92)%252Echr(92)%252Echr(92)%252Echr(34)%252Echr(51)%252Echr(52)%252Echr(92)%252Echr(92)%252Echr(92)%252Echr(34)%252Echr(99)%252Echr(111)%252Echr(108)%252Echr(114)%252Echr(61)%252Echr(92)%252Echr(92)%252Echr(92)%252Echr(34)%252Echr(114)%252Echr(101)%252Echr(100)%252Echr(92)%252Echr(92)%252Echr(34)%252Echr(62)%252Echr(79)%252Echr(111)%252Echr(112)%252Echr(115)%252Echr(44)%252Echr(32)%252Echr(73)%252Echr(39)%252Echr(118)%252Echr(101)%252Echr(32)%252Echr(98)%252Echr(101)%252Echr(101)%252Echr(110)%252Echr(32)%252Echr(104)%252Echr(97)%252Echr(99)%252Echr(107)%252Echr(101)%252Echr(100)%252Echr(46)%252Echr(60)%252Echr(98)%252Echr(114)%252Echr(62)%252Echr(72)%252Echr(111)%252Echr(119)%252Echr(32)%252Echr(101)%252Echr(109)%252Echr(98)%252Echr(97)%252Echr(114)%252Echr(97)%252Echr(115)%252Echr(105)%252Echr(105)%252Echr(105)%252Echr(116)%252Echr(116)%252Echr(110)%252Echr(110)%252Echr(116)%252Echr(62)%252Echr(92)%252Echr(34)%252Echr(59)%252Echr(32)%252Echr(63)%252Echr(62)%252Echr(34)%252Echr(32)%252Echr(62)%252Echr(32)%252Echr(47)%252Echr(118)%252Echr(97)%252Echr(114)%252Echr(47)%252Echr(119)%252Echr(119)%252Echr(119)%252Echr(47)%252Echr(104)%252Echr(116)%252Echr(109)%252Echr(108)%252Echr(47)%252Echr(112)%252Echr(104)%252Echr(112)%252Echr(98)%252Echr(98)%252Echr(47)%252Echr(118)%252Echr(105)%252Echr(101)%252Echr(119)%252Echr(116)%252Echr(111)%252Echr(112)%252Echr(105)%252Echr(99)%252Echr(46)%252Echr(112)%252Echr(104)%252Echr(112)%252Echr(32)%252Echr(27)`. The forum post content includes the text: "Yes, it's very secure. We're pretty sure we've stamped out all the security vulnerabilities at this point."

# Red Hat Today: *SELinux Use Case*

# Red Hat Today: *RHEL Security Status*

## *SELinux Use Case*

- Apache should not be allowed to overwrite content
  - Therefore, Apache – and any program started by Apache – is not given write access to the data
  - SELinux constrains the program, regardless of the user running executable
  - The content is protected, even if the Apache PHP/CGI user owns the files

- When attacker uses the same exploit, with SELinux turned on:

```
Mar  3 23:02:04 rhel4-u4-as kernel: audit(1170820924.171:108):  
avc: denied { write } for pid=26760 comm="sh"  
name="phpbb" dev=dm-0 ino=1114119  
scontext=root:system_r:httpd_sys_script_t  
tcontext=root:object_r:httpd_sys_content_t tclass=dir
```

# Red Hat Today: *RHEL Security Status*

## *SELinux*

### **Loadable Policy Modules**

- In the past, all policy changes had to be made to the policy source
  - Required the entire policy re-compiled
  - Requiring a full set of policy development tools on production systems.
- Modules allow for the creation of self-contained policy modules
  - Safely linked together to create system policies
  - Add policy on the fly
  - Remove policy on the fly
- **Framework to allow ISV/OEM partners to ship their own modular SELinux policy**

# Red Hat Today: *RHEL Security Status*

***Who cares about SELinux Loadable Policy Modules?***

# Red Hat Today: *RHEL Security Status*

***Who cares about SELinux Loadable Policy Modules?***

**or**

**I just turn off SELinux anyway**

# Red Hat Today: *RHEL Security Status*

## *SELinux*

- Red Hat gives employees a “Corporate Standard Build”
  - Customized RHEL Desktop
  - Includes VPN Configuration

- VPN Broke in last update!

# Red Hat Today: *Systems Management*

## *Red Hat Network*

**A systems management platform designed to provide complete life cycle management of the operating system and applications.**

- Provision/re-provision machines without touching them
- Manage 1,000 systems as easily as 1
- Ensure security fixes / config changes applied consistently across enterprise

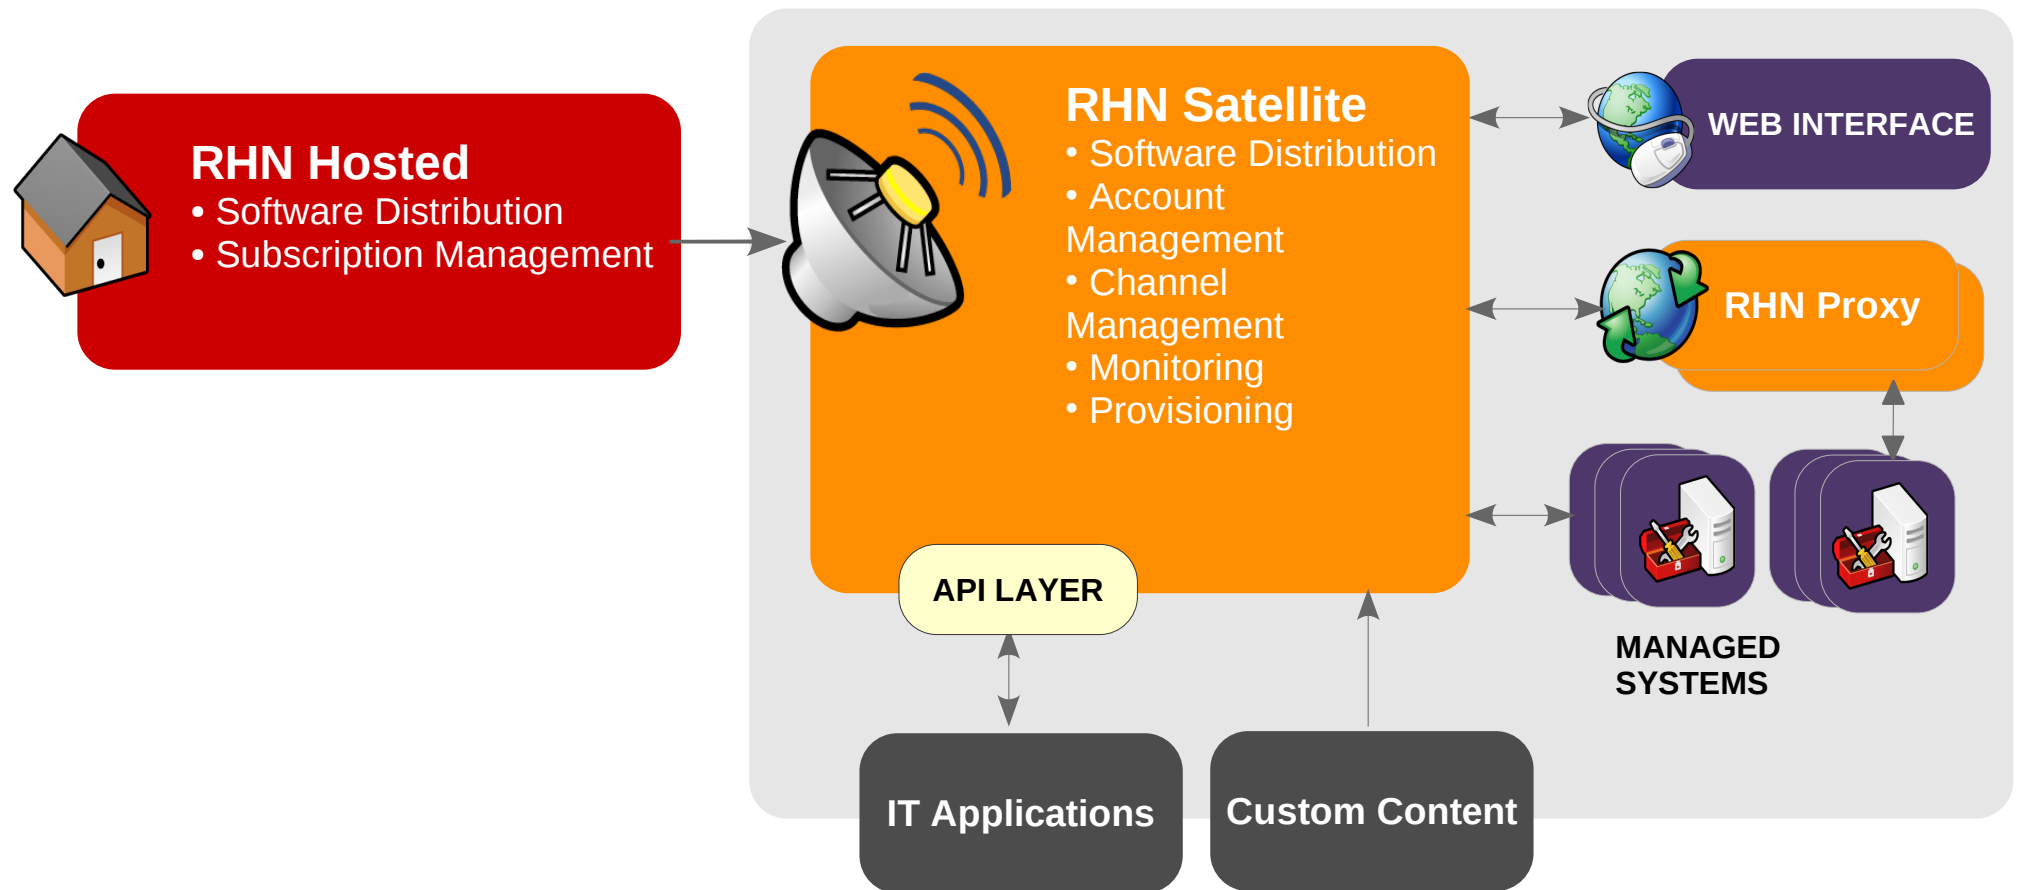

# What is Red Hat Network?

- ■ Enterprise solution, enhanced control
- ■ All system information stored locally on your network
- ■ Custom content distribution
- ■ Ability to run disconnected from internet

# RHN Satellite Deployment Model

# Open Discussion

# Supplemental: Red Hat Use Case

# System z Use Case: How Red Hat Uses Z

- IBM zSeries 2094 (z9)
- IBM zSeries 2084 (z990)
- Shark storage (ESS unit 2105, 16 full drawers of disk)
  - Provided via FCP layer emulation
- Fully loaded z10 comes July '08

# System z Use Case: How Red Hat Uses Z

- **Training (internal/external)**
- **Development VMs**
  - s390-utils, kernel, integrating DeveloperWorks, etc
- **Quality Engineering**
  - VM for each RHEL distro released since RHEL 4 (4.0, 4.1..... 5.1)
- **Support Desk**
  - Emulating user problems

# System z Use Case: How Red Hat Uses Z

- **JBoss Development (dev, test, prod)**
- **Red Hat Network Development (dev, test, prod)**
- **Enterprise IPA Development (dev, test, prod)**
- **Cross compilation of all RHEL architectures**
- **Staff accounts (sandbox environments, demos)**

# System z Use Case: How Red Hat Z

- **Red Hat Network for deployment of new VMs, patching**
  - Managed by one staff member
    - Allows patching, reprovision z/VM guests, etc

Most Critical Systems		
System Name	All Updates	Security Errata
<a href="#">beltbuckle</a>	226	 46
<a href="#">RHT_Laptop</a>	246	 41
<a href="#">IAD_DevBox</a>	204	 32
<a href="#">IAD_DevBox1</a>	161	 19
<a href="#">RHT-IAD_turtle</a>	7	 5

# System z Use Case: How Red Hat Z

## ■ RHN for Z: Lesson Learned

- When configuring the kickstart through the web interface, choose Static IP instead of DHCP.
- In the Extra Kernel Parameters text box, enter the information normally found in the CMS CONF file.
  - Single line!

```
DASD=100 HOSTNAME=example IPADDR=192.168.5.100 ...
```
