

NI CYBER

Northern Ireland Cyber Security Cluster

NI Cyber exists to promote the expertise of >35 companies from NI, identifying opportunities for business and national/international collaboration, and promoting career opportunities in cyber security.

The Northern Ireland Cyber Security Cluster

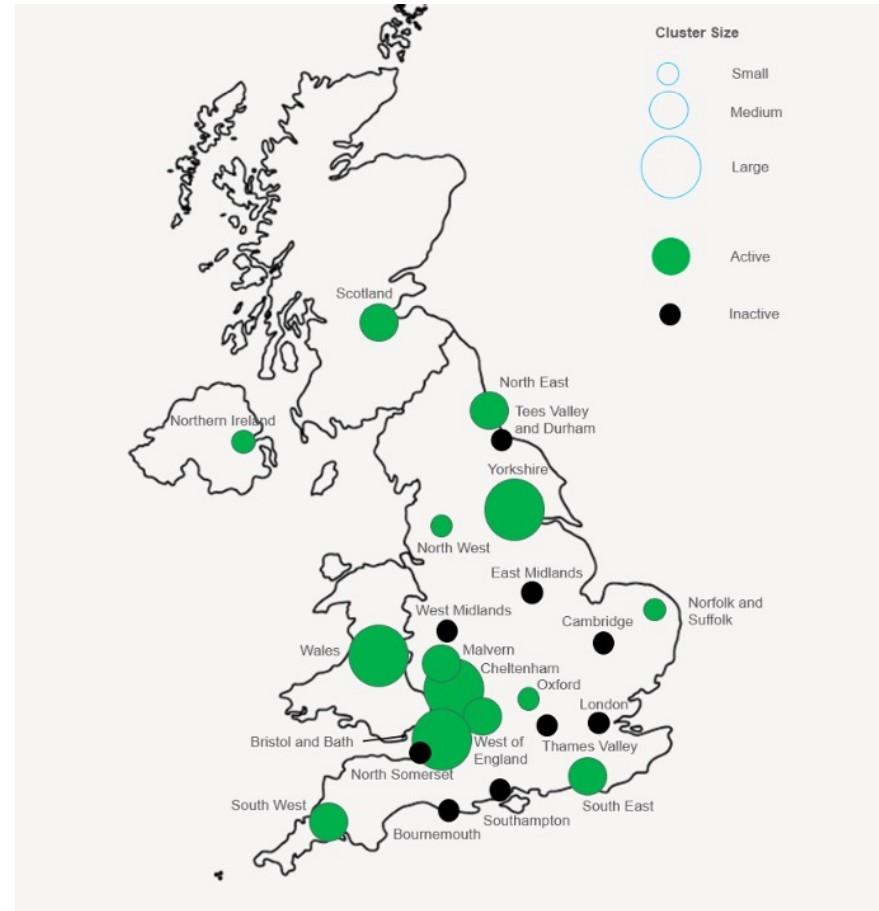

- Collaboration
- Mutual Support
- Growth
- Start-ups
- SME
- Multinational companies
- Academia (CSIT)
- Industry accreditation bodies (ISACA, OWASP)
- Industry stakeholders (ADS NI)

NI CYBER

Northern Ireland Cyber Security Cluster

The Northern Ireland Cyber Security Cluster

- Work on knowledge transfer – Knowledge sharing is key to the success of clusters. Cyberveileg holds information exchange sessions to support and grow specialties, and encourage innovation and collaboration
- Partnership with other regions – The Hague Security Delta runs events with international partners such as Israel's Cyberspark to scope for joint business projects and value chain linkages
- Raise profile of members and give an impetus to action – Cyber Ireland's Cyber Security Month
- UK cyber clusters - Whilst each cluster has an individual regional focus, many are keen to learn from other clusters. More collaboration would enable clusters to see how they 'fit' into the national picture, thus strengthening their sense of purpose. DCMS is interested to support clusters to strengthen their region, which will in turn strengthen the national UK offering.
- Create the 'atmosphere' or the 'ecosystem' for collaboration between researchers, entrepreneurs and investors.

There is convincing evidence that companies working in collaborations/clusters are more innovative and consequently more successful and profitable.

NI Cyber Roles

- Promote NI Cyber and member companies
- Identify business development and collaboration opportunities
- Develop sub-groups within NI Cyber
- Increase engagement across industry sectors
- Improve Cyber Resilience of NI companies
- Sustainability
- Explore and formalise links to cyber security clusters nationally and globally

What's next?

- Research and understand our members needs and requirements
- Remove barriers to growth for our cyber ecosystem
- Understand skills issues facing the industry
- Develop our business model
- Cyber Security career opportunities/placements and job opportunities
- Work with our colleagues in UK, Ireland, Europe and further afield

Thank you
