

The intersection of

Performance

&

Accessibility

#PerfMatters 2019

Let's set the stage:

Performance

The manner in which a mechanism behaves

1.  
2.  
3.  
4.  

Make beautiful products, faster. Material is a design system – backed by open-source code – that helps teams build digital experiences

Design flexibly

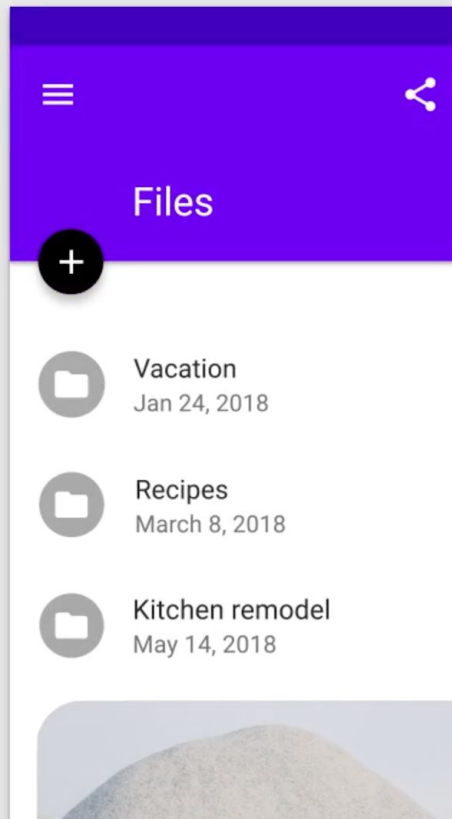

Get started with detailed design guidance and create custom Material themes to make your product unique.

**Bear with me
a for a bit:**

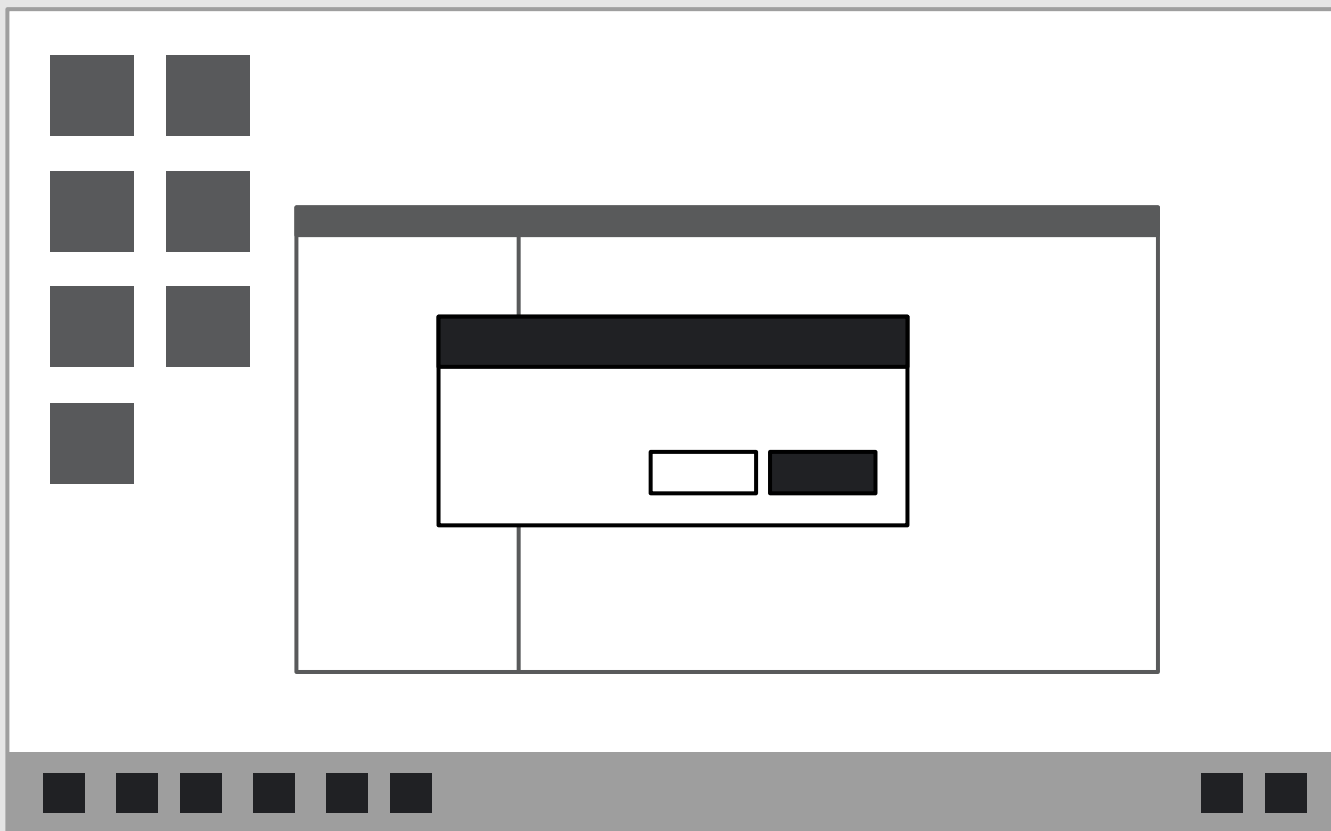

On the web:

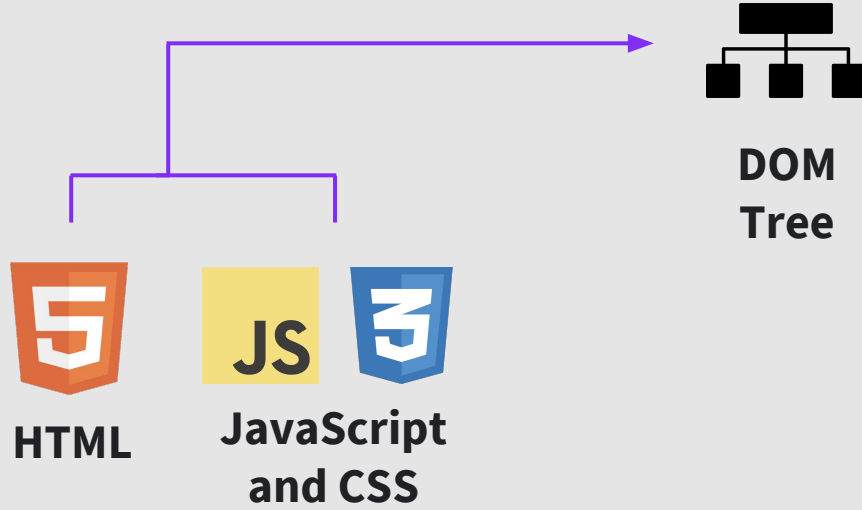

HTML

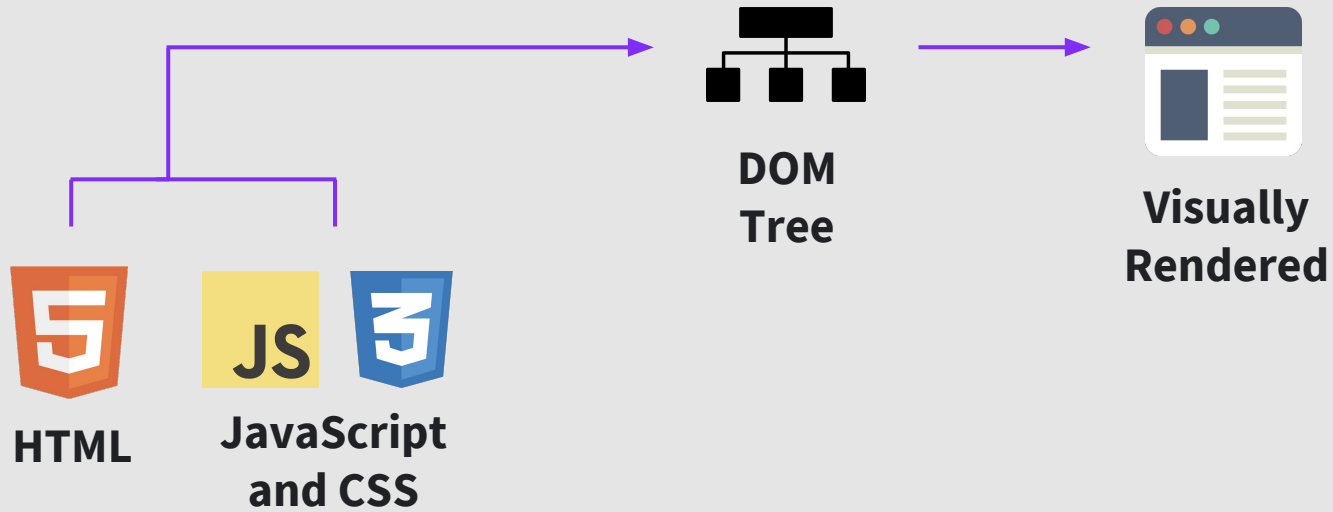

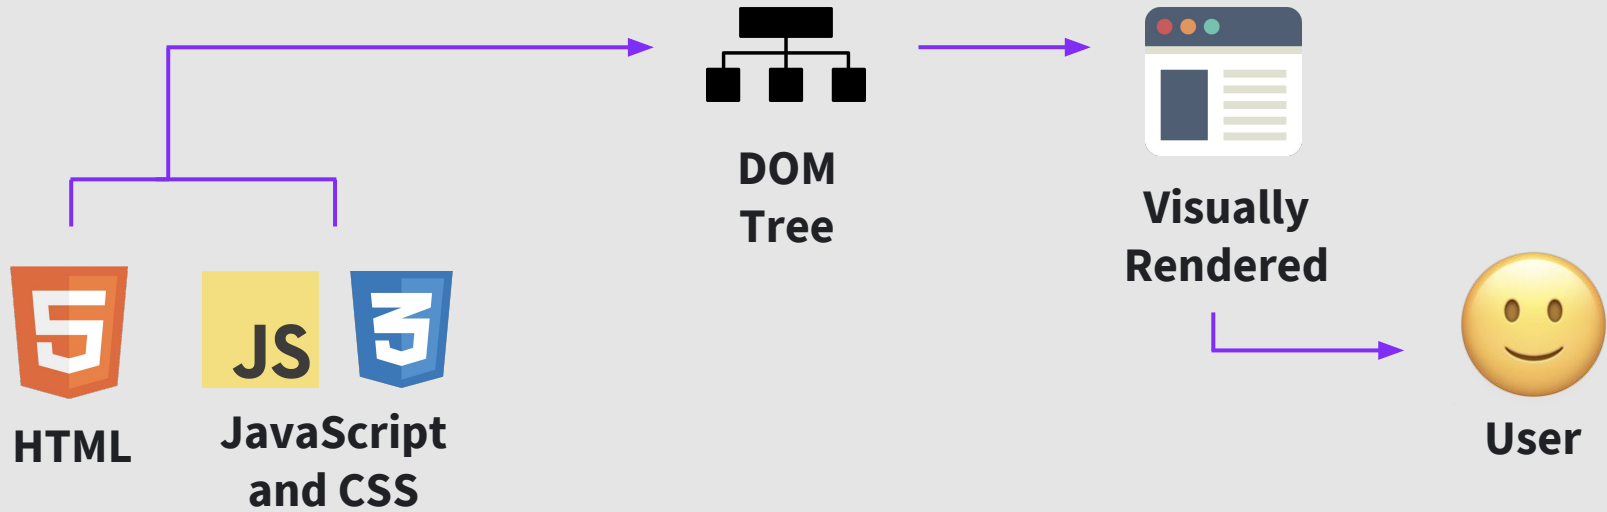

HTML

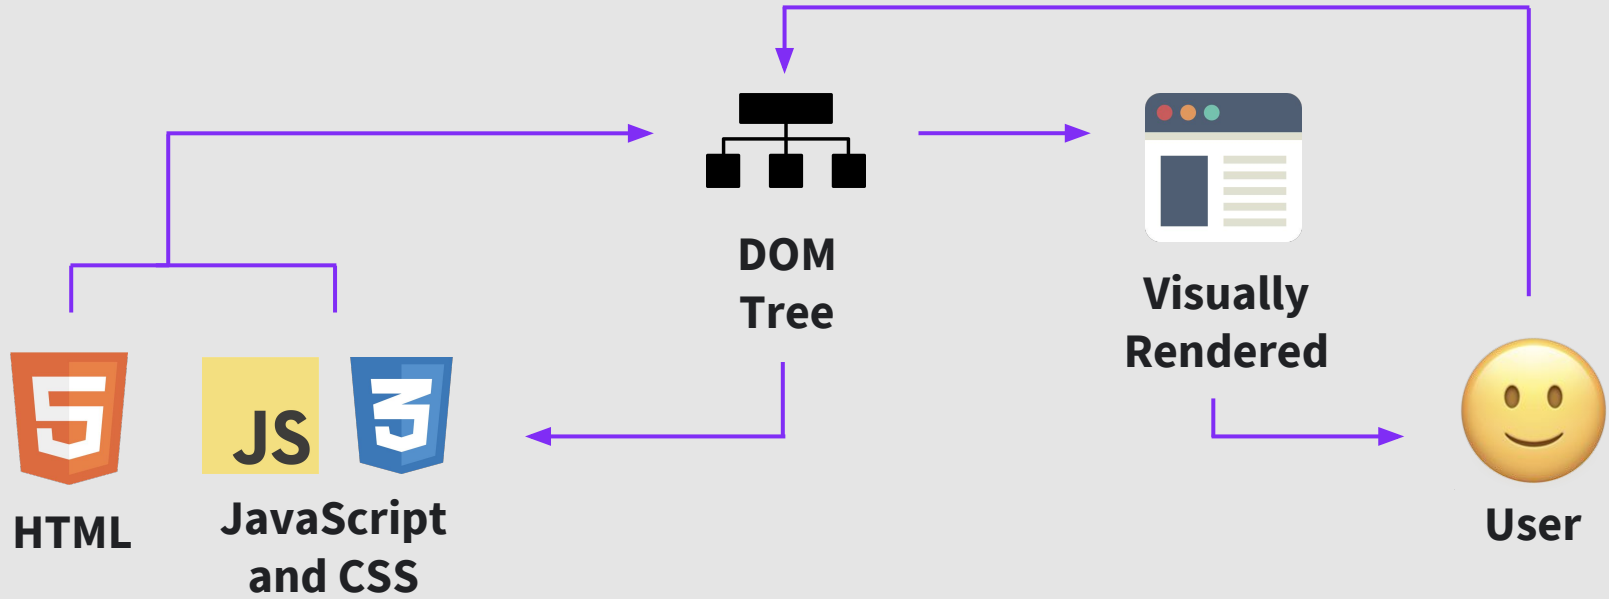

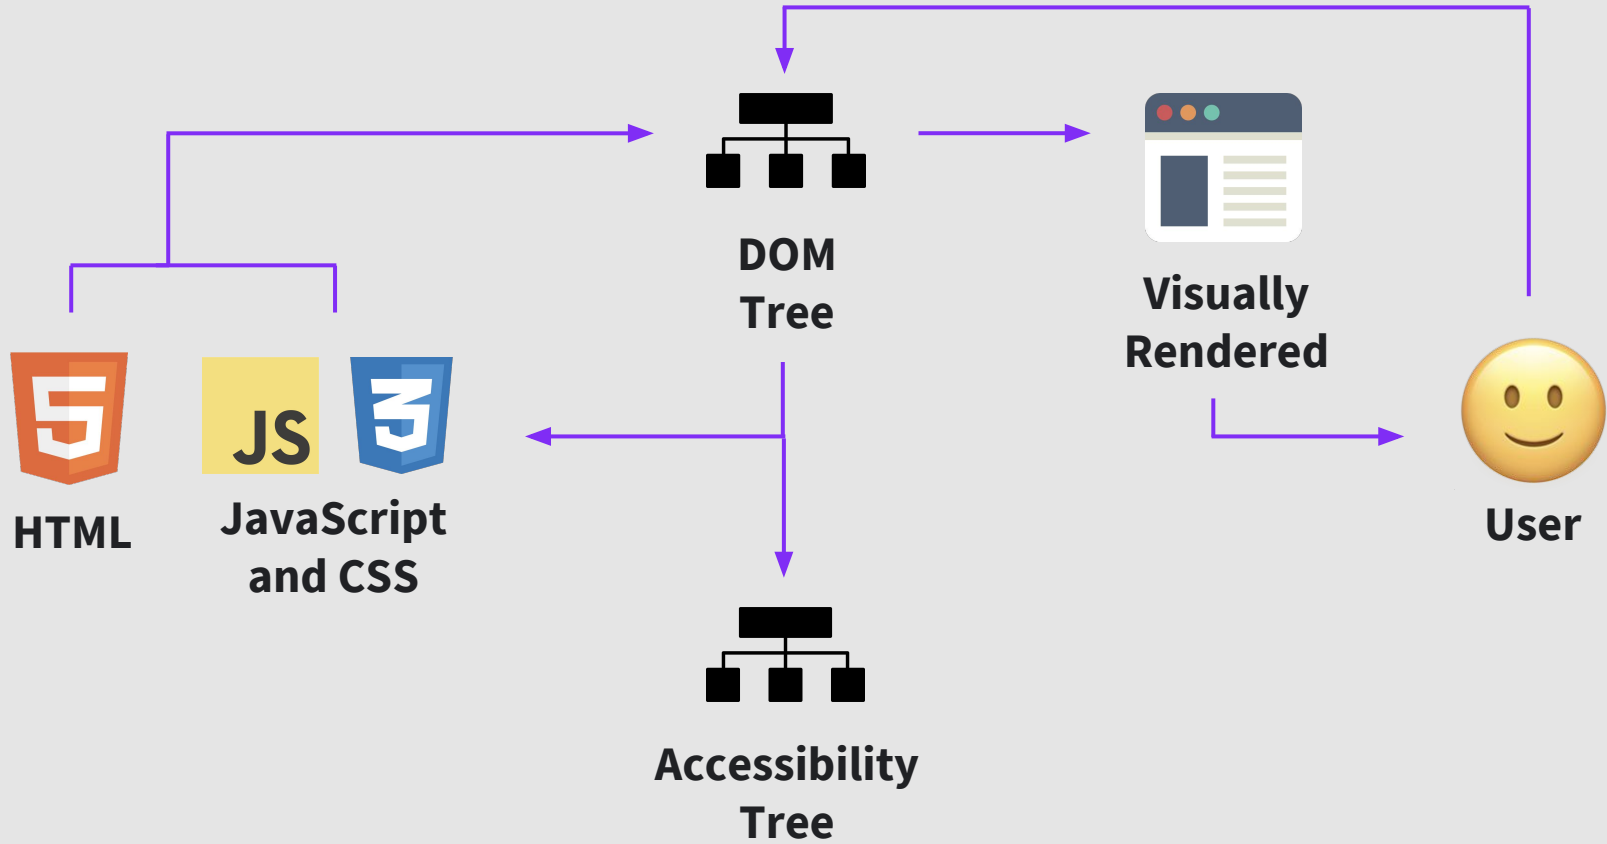

**JavaScript
and CSS**

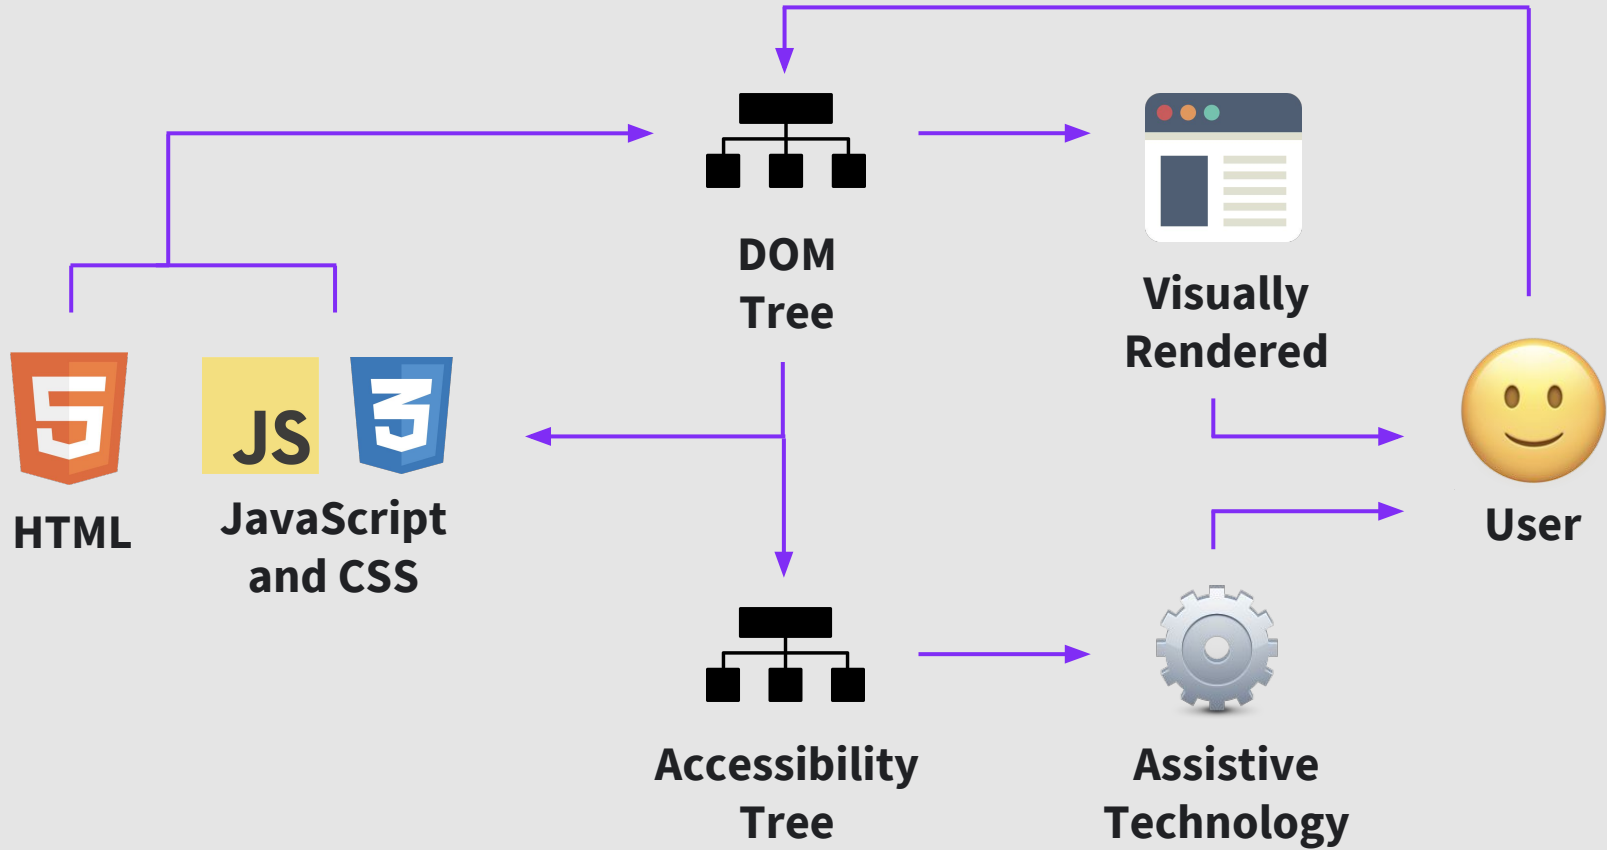

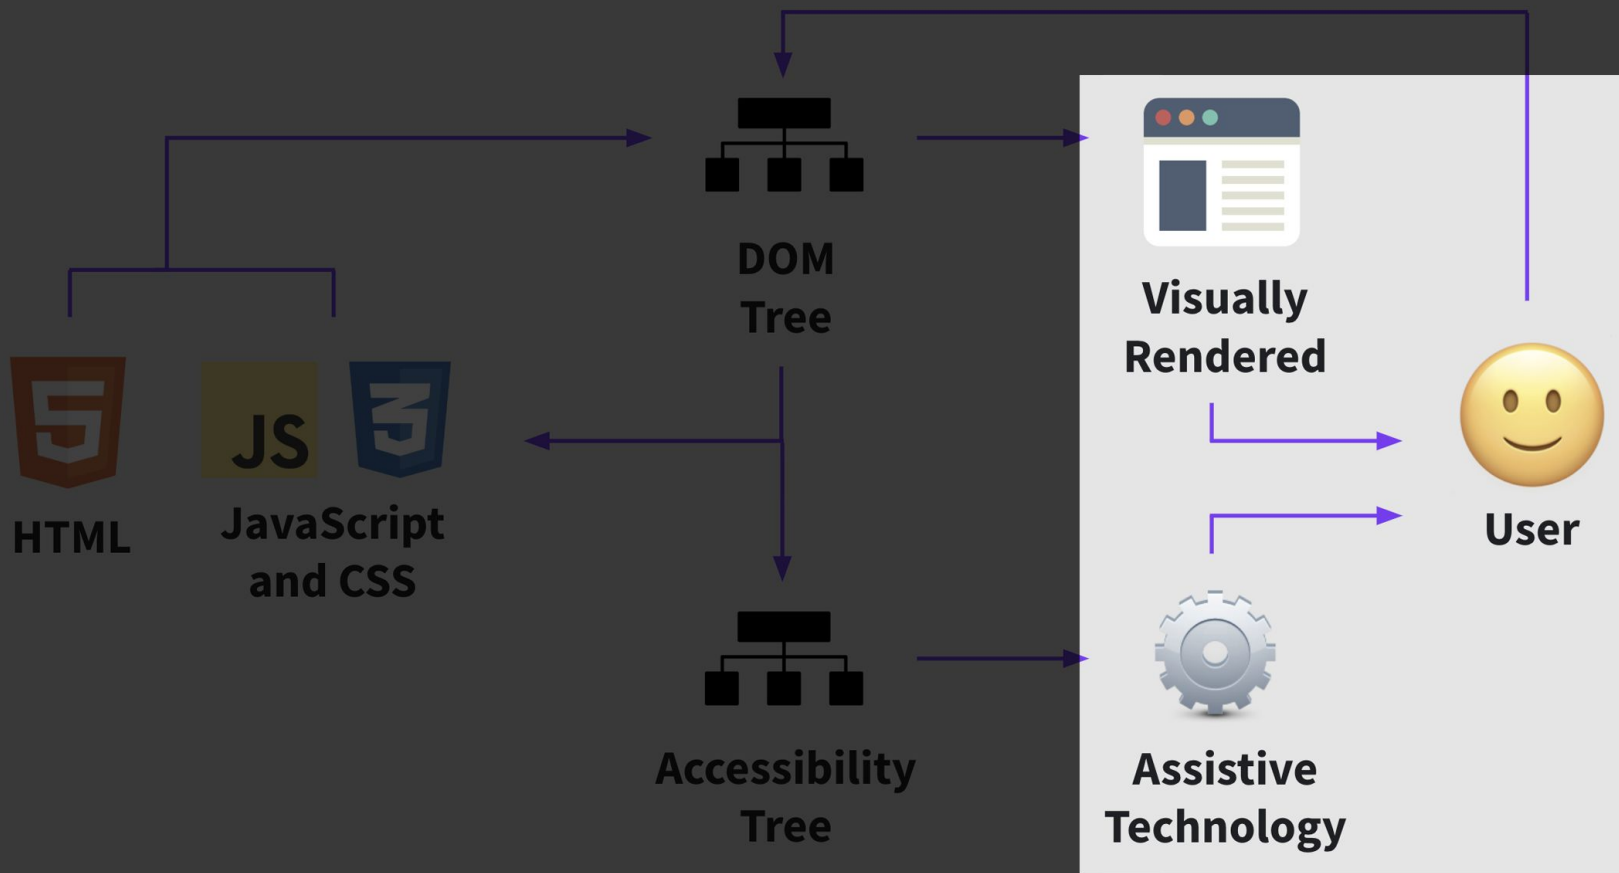

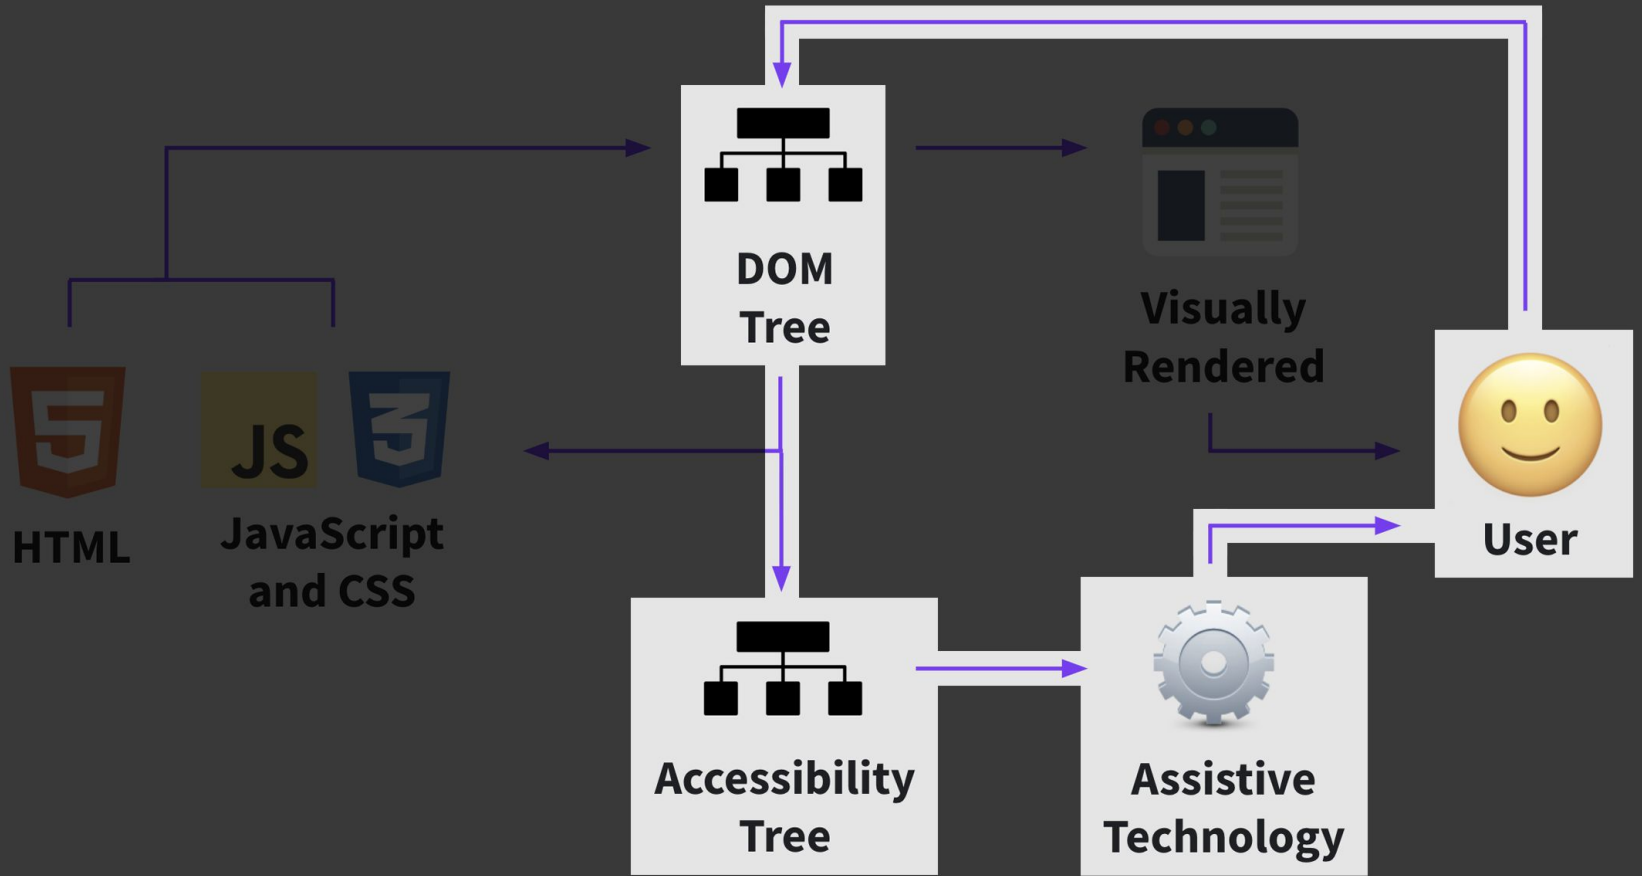

There are multiple trees

Microsoft

- Microsoft Active Accessibility (MSAA), extended with IAccessible2 (IA2)
 - UI Automation (UIA)
-

MacOS

- NSAccessibility (AXAPI)
-

Linux

- Accessibility Toolkit (ATK)
- Assistive Technology Service Provider Interface (AT-SPI)

Mike Pan

@themikepan

"Why do I need a 4Ghz quadcore to run facebook?" This is why. A single word split up into 11 HTML DOM elements to avoid adblockers.

1:35 AM - 6 Feb 2019

<https://twitter.com/themikepan/status/1093035372186034176>

Yikes.

Marco Zehe ✓

@MarcoInEnglish

Nibbling away at those milliseconds it takes for information to reach assistive technologies when requested. My current task is to reduce the number of accessible objects we create for html:div elements. This is to reduce the size of the accessibility tree.

10:40 PM - 26 Jan 2019

Marco Zehe 

@MarcoInEnglish

This reduces the amount of data being transferred across process boundaries. Part of what makes Firefox accessibility slower on Windows since Firefox Quantum is the fact that assistive technologies now no longer have direct access to the original accessible tree of the document.

10:40 PM - 26 Jan 2019

Marco Zehe 

@MarcoInEnglish

A lot of it needs to be fetched across a process boundary. So the amount of data that needs to be fetched actually matters a lot now. Reducing that by filtering out objects we don't need is a good way to reduce the time it takes for information to reach assistive technologies.

10:40 PM - 26 Jan 2019

Marco Zehe 

@MarcoInEnglish

This is particularly true in dynamically updating environments like Gmail, Twitter, or Mastodon. My current patch, slated to land early in the Firefox 67 cycle, shaves off about 10 to 20% of the time it takes for certain calls to return.

10:40 PM - 26 Jan 2019

**This is only for
one browser**

**There are a lot of
browsers out there**

**Someone should
do something!**

Pruning trees

Marco Zehe 

@MarcoInEnglish

Reducing the number of milliseconds it takes for a screen reader to start speaking after a key press from about 140 to 100 here, or from 120 to 100 there, doesn't matter much on a fast machine. On a slow machine, that reduction is from about 230 to 250 down to 200 or 190.

10:40 PM - 26 Jan 2019

Be pragmatic.

The stakes are high.

Be patient.

Things move slow.

	Screen Reader	NVDA		JAWS		VoiceOver		Win-Eyes	Dolphin	SaToGo
	Browser	IE	FF	IE	FF	Mac	iOS	IE	IE	IE
	Reliability when used correctly (82% average)	75%	77%	92%	87%	79%	70%	89%	83%	83%

Figure 8.6

NASA Task Load Index

Hart and Staveland's NASA Task Load Index (TLX) method assesses work load on five 7-point scales. Increments of high, medium and low estimates for each point result in 21 gradations on the scales.

Name	Task	Date
Mental Demand		
How mentally demanding was the task?		
Very Low Very High		
Physical Demand		
How physically demanding was the task?		
Very Low Very High		
Temporal Demand		
How hurried or rushed was the pace of the task?		
Very Low Very High		
Performance		
How successful were you in accomplishing what you were asked to do?		
Perfect Failure		
Effort		
How hard did you have to work to accomplish your level of performance?		
Very Low Very High		
Frustration		
How insecure, discouraged, irritated, stressed, and annoyed were you?		
Very Low Very High
